Digital SAT Reading and Writing

1,000 Practice Questions

This booklet is original practice in the style of the Digital SAT Reading and Writing section. It is not produced by the College Board and is not an official SAT. Each question has its own short text and four choices, as on the current test. The mix follows the College Board's domain weights: Craft and Structure about 28 percent, Information and Ideas about 26 percent, Standard English Conventions about 26 percent, and Expression of Ideas about 20 percent. Within each skill, the label under the question number names the task family (the kind of move the question asks for) and the difficulty. Families are different jobs, not the same job with new numbers. Questions in a skill move through those families. The answer key is at the end.

Passages, studies, and data are written for practice. Do not treat the fictional studies as real research findings.

How the section is weighted

Craft and Structure	280 questions
Information and Ideas	260 questions
Standard English Conventions	260 questions
Expression of Ideas	200 questions

Craft and Structure: Words in Context

1. *Easy — precise word*
The desert flowers were _____: they bloomed after the rain and were gone within a week.

Which choice completes the text with the most logical and precise word or phrase?

A) ephemeral

B) fragrant

B) hidden

C) required

D) large

113. *Hard — precise word*
The account is _____, and it never grants the opposing side a fair statement of its reasons.

Which choice completes the text with the most logical and precise word or phrase?

A) short

B) partisan

C) neutral

D) oral

114. *Hard — precise word*
The mineral is _____ in water and does not react even when the water is heated.

Which choice completes the text with the most logical and precise word or phrase?

A) rare

B) colored

C) inert

D) reactive

115. *Hard — precise word*
The pardon was _____, with no fine, no apology, and no limit on future office.

Which choice completes the text with the most logical and precise word or phrase?

A) unconditional

B) partial

C) delayed

D) secret

116. *Hard — precise word*
The effect was _____: the pain faded within an hour, and by evening it was gone.

Which choice completes the text with the most logical and precise word or phrase?

A) lasting

B) severe

C) transient

D) imagined

117. *Hard — precise word*
The critique is _____, cutting to a contradiction in the book's central chapter rather than scolding its style.

Which choice completes the text with the most logical and precise word or phrase?

A) personal

B) mild

C) trenchant

D) late

118. *Hard — precise word*
The villagers were _____ of the contract and would not sign until a lawyer read every clause aloud.

Which choice completes the text with the most logical and precise word or phrase?

A) unable

B) wary

C) eager

D) absent

119. *Hard — precise word*
The melody is _____, and nothing in it suggests celebration.

Which choice completes the text with the most logical and precise word or phrase?

A) joyful

B) somber

C) brief

D) loud

120. *Hard — precise word*
The claim is _____, because no record of the alleged meeting survives.

Which choice completes the text with the most logical and precise word or phrase?

A) documented

B) unverifiable

C) popular

D) recent

121. *Hard — precise word*
The design is _____, limited to bare concrete and a single window.

Which choice completes the text with the most logical and precise word or phrase?

A) fragile

B) temporary

C) ornate

D) austere

122. *Hard — precise word*
The note in the margin is _____, and even the author's biographer cannot say what the initials mean.

Which choice completes the text with the most logical and precise word or phrase?

A) cryptic

B) plain

C) lengthy

D) forged

123. *Hard — precise word*
The alliance was _____, formed to win one vote and abandoned the following week.

Which choice completes the text with the most logical and precise word or phrase?

A) expedient

B) ancient

C) principled

D) secret

124. *Hard — precise word*
The narrator's grief is _____, and the spare sentences do not hide it.

Which choice completes the text with the most logical and precise word or phrase?

A) hidden

B) feigned

C) brief

D) palpable

125. *Hard — precise word*
The order was _____: identical applications were approved or denied with no stated difference.

Which choice completes the text with the most logical and precise word or phrase?

A) written

B) consistent

C) early

D) arbitrary

126. *Hard — precise word*
The soil is _____, and even weeds fail within a month of planting.

Which choice completes the text with the most logical and precise word or phrase?

A) wet

B) barren

C) public

D) fertile

127. *Hard — precise word*
The apology was _____, and she named the specific harm rather than offering a general regret.

Which choice completes the text with the most logical and precise word or phrase?

A) heartfelt

B) perfunctory

C) late

D) public

128. *Hard — precise word*
The procedure is _____, requiring four forms and a waiting period for a simple request.

Which choice completes the text with the most logical and precise word or phrase?

A) secret

B) cumbersome

C) optional

D) simple

129. *Hard — precise word*
The light was _____, with no hard shadows, because clouds covered the sun.

Which choice completes the text with the most logical and precise word or phrase?

A) dim

B) direct

C) colored

D) diffuse

130. *Hard — precise word*
The argument is _____: the conclusion simply repeats the assumption made in the first sentence.

Which choice completes the text with the most logical and precise word or phrase?

A) circular

B) popular

C) published

D) linear

131. *Hard — precise word*
The welcome was _____, with speeches, flowers, and praise far beyond the occasion.

Which choice completes the text with the most logical and precise word or phrase?

A) official

B) late

C) restrained

D) effusive

132. *Hard — precise word*
The texture is _____, and no stripe or knot breaks the surface.

Which choice completes the text with the most logical and precise word or phrase?

A) varied

B) thin

C) rough

D) uniform

133. *Hard — precise word*
The response was _____, a short note that neither praised the plan nor opposed it.

Which choice completes the text with the most logical and precise word or phrase?

A) public

B) heated

C) tepid

D) late

134. *Hard — precise word*
The frontier on this map is _____, and each nation shades the same valley as its own.

Which choice completes the text with the most logical and precise word or phrase?

A) settled

B) coastal

C) disputed

D) ancient

135. *Hard — precise word*
The remedy is _____: it eases the cough but does not treat the infection causing it.

Which choice completes the text with the most logical and precise word or phrase?

A) curative

B) palliative

C) costly

D) rare

136. *Hard — precise word*
The prose is _____, and the author cuts every adjective that is not needed for the sense.

Which choice completes the text with the most logical and precise word or phrase?

A) spare

B) confusing

C) copied

D) ornate

137. *Hard — precise word*
The tribute was _____, and the speaker avoided the grand phrases the occasion seemed to invite.

Which choice completes the text with the most logical and precise word or phrase?

A) musical

B) effusive

C) late

D) restrained

138. *Hard — precise word*
The finding is _____: every other site showed a decline, and this one showed a sharp rise.

Which choice completes the text with the most logical and precise word or phrase?

A) small

B) anomalous

C) typical

D) recent

139. *Hard — precise word*
Her reasoning is _____, and she flags each place where the evidence is thinner than the prose.

Which choice completes the text with the most logical and precise word or phrase?

A) scrupulous

B) careless

C) brief

D) public

140. *Hard — precise word*
The humor is _____, delivered without a smile, so that a listener may miss the joke.

Which choice completes the text with the most logical and precise word or phrase?

A) broad

B) visual

C) deadpan

D) cruel

141. *Hard — precise word*
The report is _____, giving each side's strongest evidence before offering a judgment.

Which choice completes the text with the most logical and precise word or phrase?

A) brief

B) evenhanded

C) biased

D) oral

142. *Hard — precise word*
The phrase is _____, and a word-for-word translation misses the meaning it has in this region.

Which choice completes the text with the most logical and precise word or phrase?

A) literal

B) long

C) idiomatic

D) new

143. *Hard — precise word*
The calm was _____, and the letters from that week show the council already preparing for a strike.

Which choice completes the text with the most logical and precise word or phrase?

A) revealing

B) brief

C) deceptive

D) public

144. *Hard — precise word*
The reform was _____, changing one clause of the code and leaving the rest in place.

Which choice completes the text with the most logical and precise word or phrase?

A) secret

B) popular

C) incremental

D) sweeping

145. *Hard — precise word*
The tone is _____, praising the plan in words that clearly mean the opposite.

Which choice completes the text with the most logical and precise word or phrase?

A) earnest

B) sardonic

C) plain

D) brief

146. *Hard — precise word*
The document is _____: it appears in no archive from the period, and the paper itself is modern.

Which choice completes the text with the most logical and precise word or phrase?

A) lengthy

B) authentic

C) apocryphal

D) translated

147. *Hard — precise word*
The pain was _____, sharp enough that she stopped speaking until it passed.

Which choice completes the text with the most logical and precise word or phrase?

A) acute

B) imagined

C) mild

D) chronic

148. *Hard — precise word*
The commentary is _____, pausing to correct a minor date that does not affect the story.

Which choice completes the text with the most logical and precise word or phrase?

A) pedantic

B) brief

C) oral

D) careless

149. *Hard — precise word*
The agreement looks _____, covering price, delivery, and what happens if a shipment is lost.

Which choice completes the text with the most logical and precise word or phrase?

A) verbal

B) comprehensive

C) partial

D) secret

150. *Hard — precise word*
The gesture was _____, and she offered the other side the wording it had asked for.

Which choice completes the text with the most logical and precise word or phrase?

A) private

B) late

C) hostile

D) conciliatory

151. *Hard — precise word*
The style is _____, leaving out steps that a specialist can supply but a new reader cannot.

Which choice completes the text with the most logical and precise word or phrase?

A) elliptical

B) ornate

C) explicit

D) copied

152. *Hard — precise word*
The charge is _____, and a conviction would bar him from holding office.

Which choice completes the text with the most logical and precise word or phrase?

A) public

B) grave

C) trivial

D) recent

153. *Hard — precise word*
The description is _____, recording the wound's size and location without any comment on the suffering.

Which choice completes the text with the most logical and precise word or phrase?

A) emotional

B) brief

C) clinical

D) vague

154. *Hard — precise word*
The use of the hall is _____, and the company must leave if the school needs the room.

Which choice completes the text with the most logical and precise word or phrase?

A) provisional

B) popular

C) permanent

D) illegal

155. *Hard — precise word*
The essay is _____, written to win a dispute rather than to describe both sides.

Which choice completes the text with the most logical and precise word or phrase?

A) neutral

B) narrative

C) polemical

D) short

156. *Hard — precise word*
The light is _____, and the harsh overhead bulb flattens every face on the stage.

Which choice completes the text with the most logical and precise word or phrase?

A) dim

B) garish

C) colored

D) soft

157. *Hard — precise word*
The summary is _____ to the chapter, changing the wording without changing the claim.

Which choice completes the text with the most logical and precise word or phrase?

A) distorted

B) oral

C) brief

D) faithful

158. *Hard — precise word*
The response was _____, and he answered the accusation without raising his voice or adding a new one.

Which choice completes the text with the most logical and precise word or phrase?

A) late

B) measured

C) reckless

D) silent

159. *Hard — precise word*
The motif is _____, returning in the first chapter, the middle, and the last scene.

Which choice completes the text with the most logical and precise word or phrase?

A) hidden

B) unique

C) recurrent

D) musical

160. *Hard — precise word*
The order was _____, meant to penalize the shop rather than to repair the harm.

Which choice completes the text with the most logical and precise word or phrase?

A) written

B) temporary

C) compensatory

D) punitive

Craft and Structure: Text Structure and Purpose

161. *Medium — function of the result sentence*
Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock. After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It introduces a new claim that contradicts the first sentence.

B) It reports a result that supports the claim stated in the first sentence.

C) It explains why the study could not be completed.

D) It defines a technical term that the last sentence depends on.

162. *Medium — overall structure*
Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock. After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

Which choice best describes the overall structure of the text?

A) It defines a technical term and then traces the history of a field from ancient times to the present.

B) It states a claim and then rejects the claim because the study produced no result.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It presents a debate between two researchers and does not report a finding.

163. *Medium — purpose of a literary text*
On the night before the recital, Marisol played the same four measures until the notes were even. She let her brother's call ring unanswered. When she finally turned out the light, she left the music open on the stand.

Which choice best states the main purpose of the text?

A) It argues that practicing the night before a performance is useless.

B) It explains why Marisol has decided to quit music.

C) It compares Marisol's practice habits with her brother's.

D) It portrays Marisol's focused preparation on the night before a recital.

164. *Hard — function of a limiting sentence*
Dr. Elena Voss has studied kelp forests along the California coast. Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock. Voss notes, however, that the divers did not count adult rockfish.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It repeats the method of the study in different words.

B) It marks a limit by noting that the divers did not count adult rockfish.

C) It introduces a second study that uses a different method.

D) It rejects the result by claiming that juvenile counts were higher in standing kelp than on bare rock never happened.

165. *Hard — function of a sentence in literature*
On the night before the recital, Marisol played the same four measures until the notes were even. She let her brother's call ring unanswered. When she finally turned out the light, she left the music open on the stand.

Which choice best describes the function of the last sentence in the text?

A) It reinforces her focus by suggesting she expects to return to the music.

B) It introduces a new character who will perform instead.

C) It shows that she has given up on the recital.

D) It states the exact time the recital will begin.

166. *Medium — function of the result sentence*
Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out. Letters written in pencil on the same desks showed no such holes.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It reports a result that supports the claim stated in the first sentence.

B) It explains why the study could not be completed.

C) It defines a technical term that the last sentence depends on.

D) It introduces a new claim that contradicts the first sentence.

167. *Medium — overall structure*
Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. In the study, she measured pavement temperature on tree-lined blocks and on bare blocks. The results showed that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks. After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

C) It presents a debate between two researchers and does not report a finding.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

168. *Medium — purpose of a literary text*
Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice best states the main purpose of the text?

A) It instructs the reader in tying a sailor's knot.

B) It explains why fishing has declined at this pier.

C) It shows Ellis waiting uneasily after the other boats have returned.

D) It argues that the harbor should replace its bell.

169. *Hard — function of a limiting sentence*
Dr. Priya Raman has studied afternoon pavement temperatures in one neighborhood. Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. In the study, she measured pavement temperature on tree-lined blocks and on bare blocks. The results showed that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks. Raman notes, however, that she did not measure temperatures inside houses.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It rejects the result by claiming that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks never happened.

B) It introduces a second study that uses a different method.

C) It repeats the method of the study in different words.

D) It marks a limit by noting that she did not measure temperatures inside houses.

170. *Hard — function of a sentence in literature*
Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice best describes the function of the second sentence in the text?

A) It explains a safety rule about tangled lines.

B) It shows that his repeated work with the line is a sign of restlessness, not a needed repair.

C) It shows that he has finished his work and can go home.

D) It introduces the boat he is waiting for by name.

171. *Medium — function of the result sentence*
Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. The same rooftops had lower counts during a week of heavy smoke.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It defines a technical term that the last sentence depends on.

B) It explains why the study could not be completed.

C) It introduces a new claim that contradicts the first sentence.

D) It reports a result that supports the claim stated in the first sentence.

172. *Medium — overall structure*
Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out. Letters written in pencil on the same desks showed no such holes.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It presents a debate between two researchers and does not report a finding.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

173. *Medium — purpose of a literary text*
Lena labeled the last box and then opened it again to check the blue bowl. It was there, wrapped, where she had put it. She carried that box to the truck herself and set it behind the driver's seat, not with the stack of boxes she had told the movers to take.

Which choice best states the main purpose of the text?

A) It shows the particular care Lena takes with one object while moving.

B) It explains the route the truck will drive.

C) It criticizes the movers for breaking a bowl.

D) It compares two apartments Lena has lived in.

174. *Hard — function of a limiting sentence*
Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters. Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out. Cho notes, however, that she did not test modern inks.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It repeats the method of the study in different words.

B) It marks a limit by noting that she did not test modern inks.

C) It rejects the result by claiming that the inked lines were often the places where the paper had cracked or fallen out never happened.

D) It introduces a second study that uses a different method.

175. *Hard — function of a sentence in literature*
Lena labeled the last box and then opened it again to check the blue bowl. It was there, wrapped, where she had put it. She carried that box to the truck herself and set it behind the driver's seat, not with the stack of boxes she had told the movers to take.

Which choice best describes the function of the last sentence in the text?

A) It shows that she wants the box with the bowl to stay in her own care rather than with the other boxes.

B) It introduces a second character who will drive the truck.

C) It explains that the movers refused to take any boxes.

D) It reveals that the bowl has already been broken.

176. *Medium — function of the result sentence*
Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae. When the algae was washed off one plot, that plot's melt slowed.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It defines a technical term that the last sentence depends on.

B) It introduces a new claim that contradicts the first sentence.

C) It reports a result that supports the claim stated in the first sentence.

D) It explains why the study could not be completed.

177. *Medium — overall structure*
Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. In the study, his team timed buses before and after the lane was painted. The results showed that afternoon bus trips were shorter after the lane opened than before it. The same buses were no faster at dawn, when the avenue was already empty.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It defines a technical term and then traces the history of a field from ancient times to the present.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It presents a debate between two researchers and does not report a finding.

178. *Medium — purpose of a literary text*
James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice best states the main purpose of the text?

A) It describes a successful reconciliation between two friends.

B) It traces James's hesitation over whether to send an apology.

C) It argues that apologies should never be put in writing.

D) It gives instructions for writing a formal letter.

179. *Hard — function of a limiting sentence*
Dr. Luis Ortega has studied bus trips on Center Avenue. Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. In the study, his team timed buses before and after the lane was painted. The results showed that afternoon bus trips were shorter after the lane opened than before it. Ortega notes, however, that the study did not survey riders' satisfaction.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It repeats the method of the study in different words.

B) It rejects the result by claiming that afternoon bus trips were shorter after the lane opened than before it never happened.

C) It introduces a second study that uses a different method.

D) It marks a limit by noting that the study did not survey riders' satisfaction.

180. *Hard — function of a sentence in literature*
James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice best describes the function of the last sentence in the text?

A) It shows that, at the last moment, he keeps the letter instead of sending it.

B) It reveals the name of the person he is writing to.

C) It explains why the first two drafts were better.

D) It shows that the mailbox was out of order.

181. *Medium — function of the result sentence*
Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots. Pots with no temper at all cracked most often.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It reports a result that supports the claim stated in the first sentence.

B) It explains why the study could not be completed.

C) It introduces a new claim that contradicts the first sentence.

D) It defines a technical term that the last sentence depends on.

182. *Medium — overall structure*
Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. The same rooftops had lower counts during a week of heavy smoke.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It defines a technical term and then traces the history of a field from ancient times to the present.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It presents a debate between two researchers and does not report a finding.

183. *Medium — purpose of a literary text*
After the guests left, Rosa stayed in the kitchen and washed the same plate twice. The good glasses were still in the cupboard; she had served water in ordinary cups. She turned the porch light off only when the street was empty.

Which choice best states the main purpose of the text?

A) It describes a party that is still going on.

B) It argues that neighbors should visit more often.

C) It explains how to set a formal table.

D) It suggests, through small actions, that Rosa was strained by having guests.

184. *Hard — function of a limiting sentence*
Dr. Imani Cole has studied bees in rooftop hives and in a suburban park. Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. Cole notes, however, that one year cannot show whether the city is safer for bees over time.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that one year cannot show whether the city is safer for bees over time.

B) It repeats the method of the study in different words.

C) It introduces a second study that uses a different method.

D) It rejects the result by claiming that the rooftop count was higher than the park count never happened.

185. *Hard — function of a sentence in literature*
After the guests left, Rosa stayed in the kitchen and washed the same plate twice. The good glasses were still in the cupboard; she had served water in ordinary cups. She turned the porch light off only when the street was empty.

Which choice best describes the function of the second sentence in the text?

A) It introduces a guest who stayed behind.

B) It explains that the town was under a water restriction.

C) It hints that she avoided using the glasses she considered too good for the occasion.

D) It shows that the guests broke the good glasses.

186. *Medium — function of the result sentence*
Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them. The following cool month, some pale colonies regained color as algae returned.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It introduces a new claim that contradicts the first sentence.

B) It explains why the study could not be completed.

C) It defines a technical term that the last sentence depends on.

D) It reports a result that supports the claim stated in the first sentence.

187. *Medium — overall structure*
Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard. The gap was larger in precincts that had low turnout the year before.

Which choice best describes the overall structure of the text?

A) It presents a debate between two researchers and does not report a finding.

B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

C) It defines a technical term and then traces the history of a field from ancient times to the present.

D) It states a claim and then rejects the claim because the study produced no result.

188. *Medium — purpose of a literary text*
On the late bus, Malik reread the sentence he had underlined that morning. At his stop he did not get off. He rode to the end of the line, still mouthing the words, and only then walked back toward home.

Which choice best states the main purpose of the text?

A) It describes a book report Malik has already finished.

B) It criticizes Malik for ignoring other passengers.

C) It explains the bus schedule at the end of the line.

D) It shows Malik absorbed in a piece of reading on his way home.

189. *Hard — function of a limiting sentence*
Dr. Nina Patel has studied turnout in a local election. Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard. Patel notes, however, that the study cannot show that every recipient read the card.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that the study cannot show that every recipient read the card.

B) It introduces a second study that uses a different method.

C) It repeats the method of the study in different words.

D) It rejects the result by claiming that turnout was higher in the precincts that received the postcard never happened.

190. *Hard — function of a sentence in literature*
On the late bus, Malik reread the sentence he had underlined that morning. At his stop he did not get off. He rode to the end of the line, still mouthing the words, and only then walked back toward home.

Which choice best describes the function of the second sentence in the text?

A) It explains that the bus did not stop there that night.

B) It introduces the author of the sentence he is reading.

C) It shows that he has decided to return the book unread.

D) It shows the degree of his absorption by recording that he fails to leave at his own stop.

191. *Medium — function of the result sentence*
Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months. The gap was smaller among vendors who already had a stall of their own.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It explains why the study could not be completed.

B) It introduces a new claim that contradicts the first sentence.

C) It reports a result that supports the claim stated in the first sentence.

D) It defines a technical term that the last sentence depends on.

192. *Medium — overall structure*
Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae. When the algae was washed off one plot, that plot's melt slowed.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

C) It presents a debate between two researchers and does not report a finding.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

193. *Medium — purpose of a literary text*
Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice best states the main purpose of the text?

A) It describes the audience's reaction to the play.

B) It shows Anya calming herself with a routine just before she performs.

C) It argues that stages should have more scenery.

D) It explains why Anya has been removed from the cast.

194. *Hard — function of a limiting sentence*
Dr. Andrei Sokolov has studied algae on a melting glacier. Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae. Sokolov notes, however, that the team did not compare air temperatures above the plots.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that the team did not compare air temperatures above the plots.

B) It repeats the method of the study in different words.

C) It rejects the result by claiming that plots with more algae lost more ice that week than plots with less algae never happened.

D) It introduces a second study that uses a different method.

195. *Hard — function of a sentence in literature*
Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice best describes the function of the last sentence in the text?

A) It explains that the table is unsafe.

B) It introduces another actor who will replace her.

C) It shows that she is becoming more frightened as the curtain approaches.

D) It shows that the repeated walk has the effect of steadying her.

196. *Medium — function of the result sentence*
Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand. A later revival restored the scene and ran past two hours.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It reports a result that supports the claim stated in the first sentence.

B) It defines a technical term that the last sentence depends on.

C) It introduces a new claim that contradicts the first sentence.

D) It explains why the study could not be completed.

197. *Medium — overall structure*
Dr. Grace Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. In the study, she recorded discussions and then scored the written summaries. The results showed that summaries from students who had switched languages scored as high as summaries from students who had not. Teachers who had expected confusion found the written work orderly.

Which choice best describes the overall structure of the text?

A) It defines a technical term and then traces the history of a field from ancient times to the present.

B) It presents a debate between two researchers and does not report a finding.

C) It states a claim and then rejects the claim because the study produced no result.

D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

198. *Medium — purpose of a literary text*
The book had been due for a month. Sam slid it across the counter without the excuse he had rehearsed. The librarian stamped it, said nothing about the fine, and Sam, who had expected a lecture, thanked her twice.

Which choice best states the main purpose of the text?

A) It argues that libraries should charge higher fines.

B) It describes Sam's favorite book in detail.

C) It presents a small scene in which Sam's fear of being scolded turns out to be unnecessary.

D) It explains why Sam stole the book.

199. *Hard — function of a limiting sentence*
Dr. Grace Adeyemi has studied students who switch languages during class discussion. Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. In the study, she recorded discussions and then scored the written summaries. The results showed that summaries from students who had switched languages scored as high as summaries from students who had not. Adeyemi notes, however, that the study did not score spoken answers on the exam.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that the study did not score spoken answers on the exam.

B) It rejects the result by claiming that summaries from students who had switched languages scored as high as summaries from students who had not never happened.

C) It introduces a second study that uses a different method.

D) It repeats the method of the study in different words.

200. *Hard — function of a sentence in literature*
The book had been due for a month. Sam slid it across the counter without the excuse he had rehearsed. The librarian stamped it, said nothing about the fine, and Sam, who had expected a lecture, thanked her twice.

Which choice best describes the function of the last sentence in the text?

A) It shows Sam's relief and surprise that the lecture he expected never arrives.

B) It shows that the librarian refuses to accept the book.

C) It introduces Sam's plan to borrow another book immediately.

D) It explains the amount of the fine Sam must pay.

201. *Medium — function of the result sentence*
Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It introduces a new claim that contradicts the first sentence.

B) It explains why the study could not be completed.

C) It defines a technical term that the last sentence depends on.

D) It reports a result that supports the claim stated in the first sentence.

202. *Medium — overall structure*
Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots. Pots with no temper at all cracked most often.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It defines a technical term and then traces the history of a field from ancient times to the present.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It presents a debate between two researchers and does not report a finding.

203. *Medium — purpose of a literary text*
It was still dark when Mr. Okonkwo unlocked the bakery. He set aside the first tray, the one with the cracked edge, for his own breakfast, and he put the even loaves in the window. By the time the streetlight went out, the window was full and the cracked tray was already half gone.

Which choice best states the main purpose of the text?

A) It describes a dispute with a customer.

B) It argues that bakeries should open later.

C) It shows the baker's early-morning routine and the choice he makes about the imperfect tray.

D) It explains a new recipe he is testing.

204. *Hard — function of a limiting sentence*
Dr. Marco Bell has studied clay pots from a riverside workshop. Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots. Bell notes, however, that he did not test whether the pots survived later use over a fire.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It repeats the method of the study in different words.

B) It marks a limit by noting that he did not test whether the pots survived later use over a fire.

C) It introduces a second study that uses a different method.

D) It rejects the result by claiming that fewer shell-tempered pots cracked than sand-tempered pots never happened.

205. *Hard — function of a sentence in literature*
It was still dark when Mr. Okonkwo unlocked the bakery. He set aside the first tray, the one with the cracked edge, for his own breakfast, and he put the even loaves in the window. By the time the streetlight went out, the window was full and the cracked tray was already half gone.

Which choice best describes the function of the second sentence in the text?

A) It shows that he throws the cracked tray away.

B) It introduces a customer who demands the cracked loaves.

C) It explains that the window is broken.

D) It contrasts what he keeps for himself with what he is willing to display.

206. *Medium — function of the result sentence*
Dr. Leo Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry. In a larger storm the wetland filled and the road flooded anyway.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It defines a technical term that the last sentence depends on.

B) It introduces a new claim that contradicts the first sentence.

C) It explains why the study could not be completed.

D) It reports a result that supports the claim stated in the first sentence.

207. *Medium — overall structure*
Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences. In the study, she compared absence logs before and after the start moved from 7:30 to 8:30. The results showed that first-period absences fell in the semester after the change. Absences in the last period of the day did not fall.

Which choice best describes the overall structure of the text?

A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

B) It states a claim and then rejects the claim because the study produced no result.

C) It presents a debate between two researchers and does not report a finding.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

208. *Medium — purpose of a literary text*
The museum had closed, but Dana stayed on the step with her sketch of the statue she had not been allowed to finish. She added the hand from memory and then erased it. The guard who locked the side door nodded at the page and did not tell her to leave.

Which choice best states the main purpose of the text?

A) It explains how the guard lost his key.

B) It criticizes the museum for owning the statue.

C) It describes a tour Dana will lead in the morning.

D) It shows Dana persisting with a sketch after she has been kept from finishing it in front of the statue.

209. *Hard — function of a limiting sentence*
Dr. Joan Ekstrom has studied a high school that moved its start time later. Ekstrom claims that a later start was associated with fewer first-period absences. In the study, she compared absence logs before and after the start moved from 7:30 to 8:30. The results showed that first-period absences fell in the semester after the change. Ekstrom notes, however, that she did not measure how long students actually slept.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that she did not measure how long students actually slept.

B) It rejects the result by claiming that first-period absences fell in the semester after the change never happened.

C) It introduces a second study that uses a different method.

D) It repeats the method of the study in different words.

210. *Hard — function of a sentence in literature*
The museum had closed, but Dana stayed on the step with her sketch of the statue she had not been allowed to finish. She added the hand from memory and then erased it. The guard who locked the side door nodded at the page and did not tell her to leave.

Which choice best describes the function of the second sentence in the text?

A) It introduces a second artist who draws the hand for her.

B) It explains that the statue has no hand.

C) It shows her trying to complete the sketch from memory and then rejecting that attempt.

D) It shows that she has decided the sketch is finished.

211. *Medium — function of the result sentence*
Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain. When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It defines a technical term that the last sentence depends on.

B) It introduces a new claim that contradicts the first sentence.

C) It reports a result that supports the claim stated in the first sentence.

D) It explains why the study could not be completed.

212. *Medium — overall structure*
Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them. The following cool month, some pale colonies regained color as algae returned.

Which choice best describes the overall structure of the text?

A) It defines a technical term and then traces the history of a field from ancient times to the present.

B) It presents a debate between two researchers and does not report a finding.

C) It states a claim and then rejects the claim because the study produced no result.

D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

213. *Hard — function of a limiting sentence*
Dr. Nora Feldman has studied a reef after a heat wave. Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them. Feldman notes, however, that the divers did not measure fish counts on the reef.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It rejects the result by claiming that colonies that kept their algae stayed darker than colonies that expelled them never happened.

B) It repeats the method of the study in different words.

C) It introduces a second study that uses a different method.

D) It marks a limit by noting that the divers did not measure fish counts on the reef.

214. *Medium — function of the result sentence*
Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. In the study, she compared contract language with dated sketches. The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work. A mural whose contract has been lost shows a similar harvest scene.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It reports a result that supports the claim stated in the first sentence.

B) It defines a technical term that the last sentence depends on.

C) It introduces a new claim that contradicts the first sentence.

D) It explains why the study could not be completed.

215. *Medium — overall structure*
Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics. In the study, she played matched cylinders whose only known difference was the storage room. The results showed that more words were intelligible on the cool-room cylinders than on the attic cylinders. A cylinder moved from an attic to a cool room did not regain the words already lost.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

C) It defines a technical term and then traces the history of a field from ancient times to the present.

D) It presents a debate between two researchers and does not report a finding.

216. *Hard — function of a limiting sentence*
Dr. Ruth Adelman has studied wax-cylinder recordings from the 1890s. Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics. In the study, she played matched cylinders whose only known difference was the storage room. The results showed that more words were intelligible on the cool-room cylinders than on the attic cylinders. Adelman notes, however, that she did not compare cylinders of music with cylinders of speech.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that she did not compare cylinders of music with cylinders of speech.

B) It rejects the result by claiming that more words were intelligible on the cool-room cylinders than on the attic cylinders never happened.

C) It repeats the method of the study in different words.

D) It introduces a second study that uses a different method.

217. *Medium — function of the result sentence*
Dr. Karen Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended. New checkouts also rose, so the library was busier overall.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It introduces a new claim that contradicts the first sentence.

B) It explains why the study could not be completed.

C) It reports a result that supports the claim stated in the first sentence.

D) It defines a technical term that the last sentence depends on.

218. *Medium — overall structure*
Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months. The gap was smaller among vendors who already had a stall of their own.

Which choice best describes the overall structure of the text?

A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

B) It presents a debate between two researchers and does not report a finding.

C) It states a claim and then rejects the claim because the study produced no result.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

219. *Hard — function of a limiting sentence*
Dr. Fatima Noor has studied small loans to market vendors. Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months. Noor notes, however, that the study does not show that every loan was spent on the business.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It rejects the result by claiming that a larger share of the loan group was still trading after six months never happened.

B) It introduces a second study that uses a different method.

C) It repeats the method of the study in different words.

D) It marks a limit by noting that the study does not show that every loan was spent on the business.

220. *Medium — function of the result sentence*
Dr. Clara Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey. A note on the 1602 chart says the bay was sketched from a moving ship.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It defines a technical term that the last sentence depends on.

B) It explains why the study could not be completed.

C) It introduces a new claim that contradicts the first sentence.

D) It reports a result that supports the claim stated in the first sentence.

221. *Medium — overall structure*
Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday. In the study, her team compared blocks with measured canopy percentages. The results showed that blocks with more canopy had cooler midday surfaces. A block that lost canopy to pruning warmed the next summer.

Which choice best describes the overall structure of the text?

A) It presents a debate between two researchers and does not report a finding.

B) It defines a technical term and then traces the history of a field from ancient times to the present.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It states a claim and then rejects the claim because the study produced no result.

222. *Hard — function of a limiting sentence*
Dr. Camille Duval has studied summer surface temperatures under city trees. Duval claims that larger canopy cover is associated with cooler surfaces at midday. In the study, her team compared blocks with measured canopy percentages. The results showed that blocks with more canopy had cooler midday surfaces. Duval notes, however, that the team did not measure winter temperatures.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It rejects the result by claiming that blocks with more canopy had cooler midday surfaces never happened.

B) It repeats the method of the study in different words.

C) It marks a limit by noting that the team did not measure winter temperatures.

D) It introduces a second study that uses a different method.

223. *Medium — function of the result sentence*
Dr. Yara Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. In the study, she buried seed packets at measured temperatures and then tried to sprout them. The results showed that fewer seeds sprouted from the hot center than from the cool edge. Seeds held at the same high temperature in an oven also failed to sprout.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It introduces a new claim that contradicts the first sentence.

B) It explains why the study could not be completed.

C) It reports a result that supports the claim stated in the first sentence.

D) It defines a technical term that the last sentence depends on.

224. *Medium — overall structure*
Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand. A later revival restored the scene and ran past two hours.

Which choice best describes the overall structure of the text?

A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

B) It defines a technical term and then traces the history of a field from ancient times to the present.

C) It states a claim and then rejects the claim because the study produced no result.

D) It presents a debate between two researchers and does not report a finding.

225. *Hard — function of a limiting sentence*
Dr. Alice Peng has studied rehearsal notes for a 1936 production. Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand. Peng notes, however, that the notes do not say whether audiences liked the shorter version.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that the notes do not say whether audiences liked the shorter version.

B) It repeats the method of the study in different words.

C) It rejects the result by claiming that the cut scene was the one marked 'too long' in the director's hand never happened.

D) It introduces a second study that uses a different method.

226. *Medium — function of the result sentence*
Dr. Paolo Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks. When he sterilized the soil after four weeks, the weight gap stopped growing.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It reports a result that supports the claim stated in the first sentence.

B) It defines a technical term that the last sentence depends on.

C) It introduces a new claim that contradicts the first sentence.

D) It explains why the study could not be completed.

227. *Medium — overall structure*
Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. In the study, she compared the county's own case counts for the two summers. The results showed that the count of new cases was lower in the summer after the clinics. A neighboring county that held no clinics did not show a similar drop.

Which choice best describes the overall structure of the text?

A) It defines a technical term and then traces the history of a field from ancient times to the present.

B) It presents a debate between two researchers and does not report a finding.

C) It states a claim and then rejects the claim because the study produced no result.

D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

228. *Hard — function of a limiting sentence*
Dr. Edith Lang has studied county health reports from 1957. Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. In the study, she compared the county's own case counts for the two summers. The results showed that the count of new cases was lower in the summer after the clinics. Lang notes, however, that a drop in one county's report does not by itself prove the clinics caused it.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It rejects the result by claiming that the count of new cases was lower in the summer after the clinics never happened.

B) It introduces a second study that uses a different method.

C) It repeats the method of the study in different words.

D) It marks a limit by noting that a drop in one county's report does not by itself prove the clinics caused it.

229. *Medium — function of the result sentence*
Dr. Sara Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same. Readers did report a preference, even though their speeds matched.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It reports a result that supports the claim stated in the first sentence.

B) It introduces a new claim that contradicts the first sentence.

C) It explains why the study could not be completed.

D) It defines a technical term that the last sentence depends on.

230. *Medium — overall structure*
Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It defines a technical term and then traces the history of a field from ancient times to the present.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It presents a debate between two researchers and does not report a finding.

231. *Hard — function of a limiting sentence*
Dr. Rosa Nguyen has studied willows in a valley where wolves had returned. Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. Nguyen notes, however, that she did not measure bird nests in the willows.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that she did not measure bird nests in the willows.

B) It repeats the method of the study in different words.

C) It introduces a second study that uses a different method.

D) It rejects the result by claiming that banks with fewer signs of browsing had taller willow seedlings never happened.

232. *Medium — function of the result sentence*
Dr. Brian Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet. Helmeted riders also reported slower average speeds.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It explains why the study could not be completed.

B) It reports a result that supports the claim stated in the first sentence.

C) It introduces a new claim that contradicts the first sentence.

D) It defines a technical term that the last sentence depends on.

233. *Medium — overall structure*
Dr. Hannah Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores. In the study, she collected reported hours and quiz scores from the same students. The results showed that students with more reported hours had higher scores on average. The top scores also belonged to students who had scored high before the homework was assigned.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It presents a debate between two researchers and does not report a finding.

C) It defines a technical term and then traces the history of a field from ancient times to the present.

D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

234. *Hard — function of a limiting sentence*
Dr. Hannah Weiss has studied homework hours and quiz scores in one course. Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores. In the study, she collected reported hours and quiz scores from the same students. The results showed that students with more reported hours had higher scores on average. Weiss notes, however, that the study did not observe whether the reported hours were accurate.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It marks a limit by noting that the study did not observe whether the reported hours were accurate.

B) It repeats the method of the study in different words.

C) It introduces a second study that uses a different method.

D) It rejects the result by claiming that students with more reported hours had higher scores on average never happened.

235. *Medium — function of the result sentence*
Dr. Ellen Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry. A thick layer also appears in a year the notes call wet and windy.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It defines a technical term that the last sentence depends on.

B) It reports a result that supports the claim stated in the first sentence.

C) It introduces a new claim that contradicts the first sentence.

D) It explains why the study could not be completed.

236. *Medium — overall structure*
Dr. Leo Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry. In a larger storm the wetland filled and the road flooded anyway.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It presents a debate between two researchers and does not report a finding.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

237. *Hard — function of a limiting sentence*
Dr. Leo Martins has studied a restored wetland beside a river. Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry. Martins notes, however, that the gauges were not left in place over the winter.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It introduces a second study that uses a different method.

B) It rejects the result by claiming that the wetland depth rose while the road remained dry never happened.

C) It repeats the method of the study in different words.

D) It marks a limit by noting that the gauges were not left in place over the winter.

238. *Medium — function of the result sentence*
Dr. Nadia Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour. A rock newly exposed by a slide had almost no varnish.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It introduces a new claim that contradicts the first sentence.

B) It explains why the study could not be completed.

C) It reports a result that supports the claim stated in the first sentence.

D) It defines a technical term that the last sentence depends on.

239. *Medium — overall structure*
Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does. In the study, he compared dated letters with the notice printed the same year. The results showed that the letters name start and end times that add up to more hours than the notice lists. A company ledger of wages for piecework does not list hours at all.

Which choice best describes the overall structure of the text?

A) It presents a debate between two researchers and does not report a finding.

B) It states a claim and then rejects the claim because the study produced no result.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

240. *Hard — function of a limiting sentence*
Dr. Patrick Doyle has studied a mill town in the 1840s. Doyle claims that letters from workers describe longer hours than the company's posted notice does. In the study, he compared dated letters with the notice printed the same year. The results showed that the letters name start and end times that add up to more hours than the notice lists. Doyle notes, however, that he found no letters from the mill owner about the schedule.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It rejects the result by claiming that the letters name start and end times that add up to more hours than the notice lists never happened.

B) It introduces a second study that uses a different method.

C) It marks a limit by noting that he found no letters from the mill owner about the schedule.

D) It repeats the method of the study in different words.

241. *Medium — function of the result sentence*
Dr. Sylvia Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. In the study, she sorted the dated recipes by the season written beside them. The results showed that winter recipes list dried fruit more often and fresh herbs less often. A recipe with no season marked uses both.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It introduces a new claim that contradicts the first sentence.

B) It reports a result that supports the claim stated in the first sentence.

C) It defines a technical term that the last sentence depends on.

D) It explains why the study could not be completed.

242. *Medium — overall structure*
Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain. When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

Which choice best describes the overall structure of the text?

A) It states a claim and then rejects the claim because the study produced no result.

B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

C) It presents a debate between two researchers and does not report a finding.

D) It defines a technical term and then traces the history of a field from ancient times to the present.

243. *Hard — function of a limiting sentence*
Dr. Sophie Bernard has studied passive voice in lab reports. Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain. Bernard notes, however, that she did not test whether scientists themselves prefer one voice.

Which choice best describes the function of the last sentence in the overall structure of the text?

A) It repeats the method of the study in different words.

B) It marks a limit by noting that she did not test whether scientists themselves prefer one voice.

C) It introduces a second study that uses a different method.

D) It rejects the result by claiming that readers rated the passive versions as more certain never happened.

244. *Medium — function of the result sentence*
Dr. Angela Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before. A second reading in another city was followed by a similar brief rise.

Which choice best describes the function of the third sentence in the overall structure of the text?

A) It defines a technical term that the last sentence depends on.

B) It explains why the study could not be completed.

C) It reports a result that supports the claim stated in the first sentence.

D) It introduces a new claim that contradicts the first sentence.

245. *Medium — overall structure*
Dr. Miguel Santos claims that bridge decks grew longer on hot afternoons than on cool mornings. In the study, crews measured the same joints at dawn and at midafternoon. The results showed that the gaps at the joints were narrower in the afternoon than at dawn. On a cool cloudy day the afternoon gaps barely changed.

Which choice best describes the overall structure of the text?

A) It defines a technical term and then traces the history of a field from ancient times to the present.

B) It states a claim and then rejects the claim because the study produced no result.

C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

D) It presents a debate between two researchers and does not report a finding.

Craft and Structure: Cross-Text Connections

246. *Medium — difference between two texts*
Text 1
Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. The reported evidence is that juvenile counts were higher in standing kelp than on bare rock.
Text 2
Dr. Malik Orth reports a further check: in a warmer year the kelp remained, yet juvenile counts still fell.

Based on the texts, which choice best describes a difference between them?

A) Text 1 reports that juvenile counts were higher in standing kelp than on bare rock, while Text 2 adds that in a warmer year the kelp remained, yet juvenile counts still fell.

B) Both texts report the same further check, that in a warmer year the kelp remained, yet juvenile counts still fell.

C) The texts disagree about whether any result was reported for kelp forests along the California coast.

D) Text 2 repeats Text 1's method and adds no observation of its own.

247. *Hard — how the second text would respond*
Text 1
Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. The reported evidence is that juvenile counts were higher in standing kelp than on bare rock.
Text 2
Dr. Malik Orth reports a further check: in a warmer year the kelp remained, yet juvenile counts still fell.

Based on the texts, how would Orth most likely respond to the claim in Text 1?

A) Orth is writing about an unrelated subject and would have no response to the claim.

B) Orth would say the evidence in Text 1 was invented and should be ignored.

C) Orth would say the pattern in Text 1 may not hold under every condition, pointing out that in a warmer year the kelp remained, yet juvenile counts still fell.

D) Orth would agree that there are no exceptions to the claim in Text 1.

248. *Medium — difference between two texts*
Text 1
Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. The reported evidence is that the inked lines were often the places where the paper had cracked or fallen out.
Text 2
Dr. Samuel Ward reports a further check: some iron-gall letters stored in a dry vault showed dark ink but almost no paper loss.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that some iron-gall letters stored in a dry vault showed dark ink but almost no paper loss.

B) Text 1 reports that the inked lines were often the places where the paper had cracked or fallen out, while Text 2 adds that some iron-gall letters stored in a dry vault showed dark ink but almost no paper loss.

C) The texts disagree about whether any result was reported for iron-gall ink on nineteenth-century letters.

D) Text 2 repeats Text 1's method and adds no observation of its own.

249. *Hard — how the second text would respond*
Text 1
Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. The reported evidence is that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
Text 2
Dr. Owen Blake reports a further check: during a windy week the temperature gap between tree-lined and bare blocks nearly disappeared.

Based on the texts, how would Blake most likely respond to the claim in Text 1?

A) Blake would agree that there are no exceptions to the claim in Text 1.

B) Blake would say the pattern in Text 1 may not hold under every condition, pointing out that during a windy week the temperature gap between tree-lined and bare blocks nearly disappeared.

C) Blake is writing about an unrelated subject and would have no response to the claim.

D) Blake would say the evidence in Text 1 was invented and should be ignored.

250. *Medium — difference between two texts*
Text 1
Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. The reported evidence is that the rooftop count was higher than the park count.
Text 2
Dr. Ruth Keller reports a further check: the following spring the park count exceeded the rooftop count.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that the following spring the park count exceeded the rooftop count.

B) Text 2 repeats Text 1's method and adds no observation of its own.

C) The texts disagree about whether any result was reported for bees in rooftop hives and in a suburban park.

D) Text 1 reports that the rooftop count was higher than the park count, while Text 2 adds that the following spring the park count exceeded the rooftop count.

251. *Hard — how the second text would respond*
Text 1
Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. The reported evidence is that the inked lines were often the places where the paper had cracked or fallen out.
Text 2
Dr. Samuel Ward reports a further check: some iron-gall letters stored in a dry vault showed dark ink but almost no paper loss.

Based on the texts, how would Ward most likely respond to the claim in Text 1?

A) Ward would say the pattern in Text 1 may not hold under every condition, pointing out that some iron-gall letters stored in a dry vault showed dark ink but almost no paper loss.

B) Ward is writing about an unrelated subject and would have no response to the claim.

C) Ward would agree that there are no exceptions to the claim in Text 1.

D) Ward would say the evidence in Text 1 was invented and should be ignored.

252. *Medium — difference between two texts*
Text 1
Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt. The reported evidence is that plots with more algae lost more ice that week than plots with less algae.
Text 2
Dr. Lila Chen reports a further check: during a cloudy week the algae-covered plots melted no faster than the bare plots.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that during a cloudy week the algae-covered plots melted no faster than the bare plots.

B) Text 1 reports that plots with more algae lost more ice that week than plots with less algae, while Text 2 adds that during a cloudy week the algae-covered plots melted no faster than the bare plots.

C) The texts disagree about whether any result was reported for algae on a melting glacier.

D) Text 2 repeats Text 1's method and adds no observation of its own.

253. *Hard — how the second text would respond*
Text 1
Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. The reported evidence is that afternoon bus trips were shorter after the lane opened than before it.
Text 2
Dr. Amy Ng reports a further check: during rush hour after the lane opened, buses were faster only when they also skipped stops, and buses that made every stop were no faster than before.

Based on the texts, how would Ng most likely respond to the claim in Text 1?

A) Ng is writing about an unrelated subject and would have no response to the claim.

B) Ng would agree that there are no exceptions to the claim in Text 1.

C) Ng would say the pattern in Text 1 may not hold under every condition, pointing out that during rush hour after the lane opened, buses were faster only when they also skipped stops, and buses that made every stop were no faster than before.

D) Ng would say the evidence in Text 1 was invented and should be ignored.

254. *Medium — difference between two texts*
Text 1
Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. The reported evidence is that fewer shell-tempered pots cracked than sand-tempered pots.
Text 2
Dr. Asha Reddy reports a further check: in a cooler kiln the sand-tempered pots cracked no more often than the shell-tempered ones.

Based on the texts, which choice best describes a difference between them?

A) Text 2 repeats Text 1's method and adds no observation of its own.

B) Text 1 reports that fewer shell-tempered pots cracked than sand-tempered pots, while Text 2 adds that in a cooler kiln the sand-tempered pots cracked no more often than the shell-tempered ones.

C) Both texts report the same further check, that in a cooler kiln the sand-tempered pots cracked no more often than the shell-tempered ones.

D) The texts disagree about whether any result was reported for clay pots from a riverside workshop.

255. *Hard — how the second text would respond*
Text 1
Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. The reported evidence is that the rooftop count was higher than the park count.
Text 2
Dr. Ruth Keller reports a further check: the following spring the park count exceeded the rooftop count.

Based on the texts, how would Keller most likely respond to the claim in Text 1?

A) Keller is writing about an unrelated subject and would have no response to the claim.

B) Keller would say the pattern in Text 1 may not hold under every condition, pointing out that the following spring the park count exceeded the rooftop count.

C) Keller would agree that there are no exceptions to the claim in Text 1.

D) Keller would say the evidence in Text 1 was invented and should be ignored.

256. *Medium — difference between two texts*
Text 1
Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. The reported evidence is that colonies that kept their algae stayed darker than colonies that expelled them.
Text 2
Dr. Hugo Martins reports a further check: in a shaded lagoon, colonies that expelled algae did not pale as much as colonies on the open reef.

Based on the texts, which choice best describes a difference between them?

A) Text 2 repeats Text 1's method and adds no observation of its own.

B) Both texts report the same further check, that in a shaded lagoon, colonies that expelled algae did not pale as much as colonies on the open reef.

C) The texts disagree about whether any result was reported for a reef after a heat wave.

D) Text 1 reports that colonies that kept their algae stayed darker than colonies that expelled them, while Text 2 adds that in a shaded lagoon, colonies that expelled algae did not pale as much as colonies on the open reef.

257. *Hard — how the second text would respond*
Text 1
Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout. The reported evidence is that turnout was higher in the precincts that received the postcard.
Text 2
Dr. Chris Daley reports a further check: in a later election the postcard group and the no-card group turned out at the same rate.

Based on the texts, how would Daley most likely respond to the claim in Text 1?

A) Daley would say the pattern in Text 1 may not hold under every condition, pointing out that in a later election the postcard group and the no-card group turned out at the same rate.

B) Daley would agree that there are no exceptions to the claim in Text 1.

C) Daley would say the evidence in Text 1 was invented and should be ignored.

D) Daley is writing about an unrelated subject and would have no response to the claim.

258. *Medium — difference between two texts*
Text 1
Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. The reported evidence is that a larger share of the loan group was still trading after six months.
Text 2
Dr. Peter Lang reports a further check: in a season when the market was closed for road work, the loan group and the other group closed at the same rate.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that in a season when the market was closed for road work, the loan group and the other group closed at the same rate.

B) Text 1 reports that a larger share of the loan group was still trading after six months, while Text 2 adds that in a season when the market was closed for road work, the loan group and the other group closed at the same rate.

C) The texts disagree about whether any result was reported for small loans to market vendors.

D) Text 2 repeats Text 1's method and adds no observation of its own.

259. *Hard — how the second text would respond*
Text 1
Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt. The reported evidence is that plots with more algae lost more ice that week than plots with less algae.
Text 2
Dr. Lila Chen reports a further check: during a cloudy week the algae-covered plots melted no faster than the bare plots.

Based on the texts, how would Chen most likely respond to the claim in Text 1?

A) Chen would say the pattern in Text 1 may not hold under every condition, pointing out that during a cloudy week the algae-covered plots melted no faster than the bare plots.

B) Chen would agree that there are no exceptions to the claim in Text 1.

C) Chen would say the evidence in Text 1 was invented and should be ignored.

D) Chen is writing about an unrelated subject and would have no response to the claim.

260. *Medium — difference between two texts*
Text 1
Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. The reported evidence is that the cut scene was the one marked 'too long' in the director's hand.
Text 2
Dr. Michael Stern reports a further check: a timing sheet shows the production was already under two hours before that scene was cut.

Based on the texts, which choice best describes a difference between them?

A) The texts disagree about whether any result was reported for rehearsal notes for a 1936 production.

B) Both texts report the same further check, that a timing sheet shows the production was already under two hours before that scene was cut.

C) Text 1 reports that the cut scene was the one marked 'too long' in the director's hand, while Text 2 adds that a timing sheet shows the production was already under two hours before that scene was cut.

D) Text 2 repeats Text 1's method and adds no observation of its own.

261. *Hard — how the second text would respond*
Text 1
Dr. Grace Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. The reported evidence is that summaries from students who had switched languages scored as high as summaries from students who had not.
Text 2
Dr. Paul Higgins reports a further check: when only the exam language was allowed in the discussion, the students who had been switching scored lower on the summary than the students who had used one language all along.

Based on the texts, how would Higgins most likely respond to the claim in Text 1?

A) Higgins is writing about an unrelated subject and would have no response to the claim.

B) Higgins would say the pattern in Text 1 may not hold under every condition, pointing out that when only the exam language was allowed in the discussion, the students who had been switching scored lower on the summary than the students who had used one language all along.

C) Higgins would say the evidence in Text 1 was invented and should be ignored.

D) Higgins would agree that there are no exceptions to the claim in Text 1.

262. *Medium — difference between two texts*
Text 1
Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. The reported evidence is that banks with fewer signs of browsing had taller willow seedlings.
Text 2
Dr. Carl Jensen reports a further check: on a dry tributary, browsing decreased but willows stayed short during a drought.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that on a dry tributary, browsing decreased but willows stayed short during a drought.

B) Text 1 reports that banks with fewer signs of browsing had taller willow seedlings, while Text 2 adds that on a dry tributary, browsing decreased but willows stayed short during a drought.

C) Text 2 repeats Text 1's method and adds no observation of its own.

D) The texts disagree about whether any result was reported for willows in a valley where wolves had returned.

263. *Hard — how the second text would respond*
Text 1
Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. The reported evidence is that fewer shell-tempered pots cracked than sand-tempered pots.
Text 2
Dr. Asha Reddy reports a further check: in a cooler kiln the sand-tempered pots cracked no more often than the shell-tempered ones.

Based on the texts, how would Reddy most likely respond to the claim in Text 1?

A) Reddy would agree that there are no exceptions to the claim in Text 1.

B) Reddy would say the pattern in Text 1 may not hold under every condition, pointing out that in a cooler kiln the sand-tempered pots cracked no more often than the shell-tempered ones.

C) Reddy is writing about an unrelated subject and would have no response to the claim.

D) Reddy would say the evidence in Text 1 was invented and should be ignored.

264. *Medium — difference between two texts*
Text 1
Dr. Leo Martins claims that the wetland held floodwater that would otherwise have reached the road. The reported evidence is that the wetland depth rose while the road remained dry.
Text 2
Dr. Nina Cho reports a further check: after the outlet was widened, the wetland depth barely rose and the road flooded in a smaller storm.

Based on the texts, which choice best describes a difference between them?

A) The texts disagree about whether any result was reported for a restored wetland beside a river.

B) Text 2 repeats Text 1's method and adds no observation of its own.

C) Both texts report the same further check, that after the outlet was widened, the wetland depth barely rose and the road flooded in a smaller storm.

D) Text 1 reports that the wetland depth rose while the road remained dry, while Text 2 adds that after the outlet was widened, the wetland depth barely rose and the road flooded in a smaller storm.

265. *Hard — how the second text would respond*
Text 1
Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences. The reported evidence is that first-period absences fell in the semester after the change.
Text 2
Dr. Tom Bradley reports a further check: at a school that moved to the later start but also lengthened the first-period commute for most students, first-period absences did not fall.

Based on the texts, how would Bradley most likely respond to the claim in Text 1?

A) Bradley would say the evidence in Text 1 was invented and should be ignored.

B) Bradley would agree that there are no exceptions to the claim in Text 1.

C) Bradley is writing about an unrelated subject and would have no response to the claim.

D) Bradley would say the pattern in Text 1 may not hold under every condition, pointing out that at a school that moved to the later start but also lengthened the first-period commute for most students, first-period absences did not fall.

266. *Medium — difference between two texts*
Text 1
Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. The reported evidence is that readers rated the passive versions as more certain.
Text 2
Dr. Evan Brooks reports a further check: readers who were themselves lab instructors rated the active versions as more honest, not as less certain.

Based on the texts, which choice best describes a difference between them?

A) Text 1 reports that readers rated the passive versions as more certain, while Text 2 adds that readers who were themselves lab instructors rated the active versions as more honest, not as less certain.

B) Text 2 repeats Text 1's method and adds no observation of its own.

C) Both texts report the same further check, that readers who were themselves lab instructors rated the active versions as more honest, not as less certain.

D) The texts disagree about whether any result was reported for passive voice in lab reports.

267. *Hard — how the second text would respond*
Text 1
Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. The reported evidence is that colonies that kept their algae stayed darker than colonies that expelled them.
Text 2
Dr. Hugo Martins reports a further check: in a shaded lagoon, colonies that expelled algae did not pale as much as colonies on the open reef.

Based on the texts, how would Martins most likely respond to the claim in Text 1?

A) Martins is writing about an unrelated subject and would have no response to the claim.

B) Martins would agree that there are no exceptions to the claim in Text 1.

C) Martins would say the pattern in Text 1 may not hold under every condition, pointing out that in a shaded lagoon, colonies that expelled algae did not pale as much as colonies on the open reef.

D) Martins would say the evidence in Text 1 was invented and should be ignored.

268. *Medium — difference between two texts*
Text 1
Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. The reported evidence is that the sketches show occupations named in the contracts, such as harvesting and mill work.
Text 2
Dr. Robert Kim reports a further check: the sketch for one building shows a harvest, but that building's contract asked for a portrait of the mayor and not for a scene of work.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that the sketch for one building shows a harvest, but that building's contract asked for a portrait of the mayor and not for a scene of work.

B) The texts disagree about whether any result was reported for murals painted for public buildings in the 1930s.

C) Text 2 repeats Text 1's method and adds no observation of its own.

D) Text 1 reports that the sketches show occupations named in the contracts, such as harvesting and mill work, while Text 2 adds that the sketch for one building shows a harvest, but that building's contract asked for a portrait of the mayor and not for a scene of work.

269. *Hard — how the second text would respond*
Text 1
Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics. The reported evidence is that more words were intelligible on the cool-room cylinders than on the attic cylinders.
Text 2
Dr. Ian Brooks reports a further check: cylinders that had been played many times were faint even when they had been stored in a cool room.

Based on the texts, how would Brooks most likely respond to the claim in Text 1?

A) Brooks would say the evidence in Text 1 was invented and should be ignored.

B) Brooks would say the pattern in Text 1 may not hold under every condition, pointing out that cylinders that had been played many times were faint even when they had been stored in a cool room.

C) Brooks is writing about an unrelated subject and would have no response to the claim.

D) Brooks would agree that there are no exceptions to the claim in Text 1.

270. *Medium — difference between two texts*
Text 1
Dr. Karen Ito claims that more overdue books came back in the months after fines ended than in the months before. The reported evidence is that returns of overdue books rose after fines ended.
Text 2
Dr. Ellen Price reports a further check: returns of overdue books had already started rising the month before fines ended, when the library extended its hours.

Based on the texts, which choice best describes a difference between them?

A) Text 2 repeats Text 1's method and adds no observation of its own.

B) The texts disagree about whether any result was reported for a city that stopped charging library overdue fines.

C) Text 1 reports that returns of overdue books rose after fines ended, while Text 2 adds that returns of overdue books had already started rising the month before fines ended, when the library extended its hours.

D) Both texts report the same further check, that returns of overdue books had already started rising the month before fines ended, when the library extended its hours.

271. *Hard — how the second text would respond*
Text 1
Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. The reported evidence is that a larger share of the loan group was still trading after six months.
Text 2
Dr. Peter Lang reports a further check: in a season when the market was closed for road work, the loan group and the other group closed at the same rate.

Based on the texts, how would Lang most likely respond to the claim in Text 1?

A) Lang would say the pattern in Text 1 may not hold under every condition, pointing out that in a season when the market was closed for road work, the loan group and the other group closed at the same rate.

B) Lang is writing about an unrelated subject and would have no response to the claim.

C) Lang would say the evidence in Text 1 was invented and should be ignored.

D) Lang would agree that there are no exceptions to the claim in Text 1.

272. *Medium — difference between two texts*
Text 1
Dr. Clara Mendes claims that the 1602 chart shows a bay that later surveys place farther west. The reported evidence is that the bay drawn in 1602 sits east of the bay on the later survey.
Text 2
Dr. Henry Cho reports a further check: applied with its own scale bar, the 1602 bay sits on top of the bay in the later survey.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that applied with its own scale bar, the 1602 bay sits on top of the bay in the later survey.

B) Text 2 repeats Text 1's method and adds no observation of its own.

C) Text 1 reports that the bay drawn in 1602 sits east of the bay on the later survey, while Text 2 adds that applied with its own scale bar, the 1602 bay sits on top of the bay in the later survey.

D) The texts disagree about whether any result was reported for a 1602 coastal chart.

273. *Hard — how the second text would respond*
Text 1
Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday. The reported evidence is that blocks with more canopy had cooler midday surfaces.
Text 2
Dr. Seth Kaplan reports a further check: at midday in a strong wind, blocks with more canopy were not cooler than open blocks.

Based on the texts, how would Kaplan most likely respond to the claim in Text 1?

A) Kaplan would agree that there are no exceptions to the claim in Text 1.

B) Kaplan would say the pattern in Text 1 may not hold under every condition, pointing out that at midday in a strong wind, blocks with more canopy were not cooler than open blocks.

C) Kaplan would say the evidence in Text 1 was invented and should be ignored.

D) Kaplan is writing about an unrelated subject and would have no response to the claim.

274. *Medium — difference between two texts*
Text 1
Dr. Yara Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. The reported evidence is that fewer seeds sprouted from the hot center than from the cool edge.
Text 2
Dr. Simon Adler reports a further check: in a small pile that never heated up, center seeds sprouted as often as edge seeds.

Based on the texts, which choice best describes a difference between them?

A) Text 1 reports that fewer seeds sprouted from the hot center than from the cool edge, while Text 2 adds that in a small pile that never heated up, center seeds sprouted as often as edge seeds.

B) Both texts report the same further check, that in a small pile that never heated up, center seeds sprouted as often as edge seeds.

C) Text 2 repeats Text 1's method and adds no observation of its own.

D) The texts disagree about whether any result was reported for compost piles and weed seeds.

275. *Hard — how the second text would respond*
Text 1
Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. The reported evidence is that the cut scene was the one marked 'too long' in the director's hand.
Text 2
Dr. Michael Stern reports a further check: a timing sheet shows the production was already under two hours before that scene was cut.

Based on the texts, how would Stern most likely respond to the claim in Text 1?

A) Stern would agree that there are no exceptions to the claim in Text 1.

B) Stern would say the pattern in Text 1 may not hold under every condition, pointing out that a timing sheet shows the production was already under two hours before that scene was cut.

C) Stern is writing about an unrelated subject and would have no response to the claim.

D) Stern would say the evidence in Text 1 was invented and should be ignored.

276. *Medium — difference between two texts*
Text 1
Dr. Paolo Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. The reported evidence is that the fungi group weighed more at eight weeks.
Text 2
Dr. June Park reports a further check: under very low light both groups stayed small, and the fungi group was not heavier.

Based on the texts, which choice best describes a difference between them?

A) Both texts report the same further check, that under very low light both groups stayed small, and the fungi group was not heavier.

B) Text 1 reports that the fungi group weighed more at eight weeks, while Text 2 adds that under very low light both groups stayed small, and the fungi group was not heavier.

C) Text 2 repeats Text 1's method and adds no observation of its own.

D) The texts disagree about whether any result was reported for seedlings grown with soil fungi.

277. *Hard — how the second text would respond*
Text 1
Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. The reported evidence is that the count of new cases was lower in the summer after the clinics.
Text 2
Dr. Alan Weiss reports a further check: the county changed its case definition that spring, so the two summers were not counted in the same way.

Based on the texts, how would Weiss most likely respond to the claim in Text 1?

A) Weiss would say the evidence in Text 1 was invented and should be ignored.

B) Weiss is writing about an unrelated subject and would have no response to the claim.

C) Weiss would agree that there are no exceptions to the claim in Text 1.

D) Weiss would say the pattern in Text 1 may not hold under every condition, pointing out that the county changed its case definition that spring, so the two summers were not counted in the same way.

278. *Medium — difference between two texts*
Text 1
Dr. Sara Lind claims that the study found no reliable difference in reading speed between the two typefaces. The reported evidence is that average times for the two typefaces were nearly the same.
Text 2
Dr. Malik Orth reports a further check: a later test using very small print did find a speed difference between the typefaces.

Based on the texts, which choice best describes a difference between them?

A) Text 1 reports that average times for the two typefaces were nearly the same, while Text 2 adds that a later test using very small print did find a speed difference between the typefaces.

B) Text 2 repeats Text 1's method and adds no observation of its own.

C) Both texts report the same further check, that a later test using very small print did find a speed difference between the typefaces.

D) The texts disagree about whether any result was reported for a reading-speed test of two typefaces.

279. *Hard — how the second text would respond*
Text 1
Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. The reported evidence is that banks with fewer signs of browsing had taller willow seedlings.
Text 2
Dr. Carl Jensen reports a further check: on a dry tributary, browsing decreased but willows stayed short during a drought.

Based on the texts, how would Jensen most likely respond to the claim in Text 1?

A) Jensen would say the evidence in Text 1 was invented and should be ignored.

B) Jensen is writing about an unrelated subject and would have no response to the claim.

C) Jensen would agree that there are no exceptions to the claim in Text 1.

D) Jensen would say the pattern in Text 1 may not hold under every condition, pointing out that on a dry tributary, browsing decreased but willows stayed short during a drought.

280. *Medium — difference between two texts*
Text 1
Dr. Brian Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. The reported evidence is that helmeted riders reported fewer head injuries than riders who reported no helmet.
Text 2
Dr. Alicia Romero reports a further check: among riders who all reported the same speed, the injury gap between helmeted and unhelmeted riders was smaller.

Based on the texts, which choice best describes a difference between them?

A) Text 1 reports that helmeted riders reported fewer head injuries than riders who reported no helmet, while Text 2 adds that among riders who all reported the same speed, the injury gap between helmeted and unhelmeted riders was smaller.

B) Both texts report the same further check, that among riders who all reported the same speed, the injury gap between helmeted and unhelmeted riders was smaller.

C) The texts disagree about whether any result was reported for helmet use and head injuries in a city bike-share program.

D) Text 2 repeats Text 1's method and adds no observation of its own.

Information and Ideas: Central Ideas and Details

281. *Easy — main idea of a study*
Dr. Elena Voss has studied kelp forests along the California coast. Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock.

Which choice best states the main idea of the text?

A) The text's main point is that the divers did not count adult rockfish.

B) The text is mainly a set of instructions for how to carry out the following procedure: divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock.

C) Voss concludes that it is not the case that standing kelp is associated with higher numbers of juvenile rockfish.

D) Voss's study supports the claim that standing kelp is associated with higher numbers of juvenile rockfish.

282. *Easy — stated detail*
Dr. Elena Voss has studied kelp forests along the California coast. Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock.

According to the text, which statement is true?

A) Voss reports that no result was collected.

B) The text states that the divers did not count adult rockfish.

C) Juvenile counts were higher in standing kelp than on bare rock.

D) It was not the case that juvenile counts were higher in standing kelp than on bare rock.

283. *Medium — main idea of a literary text*
On the night before the recital, Marisol played the same four measures until the notes were even. She let her brother's call ring unanswered. When she finally turned out the light, she left the music open on the stand.

Which choice best states the main idea of the text?

A) Marisol is preparing with single-minded focus the night before her recital.

B) The passage explains how to even out a difficult musical passage.

C) The passage is mainly about a phone call from Marisol's brother.

D) Marisol has decided that the recital is not worth preparing for.

284. *Easy — main idea of a study*
Dr. Luis Ortega has studied bus trips on Center Avenue. Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. In the study, his team timed buses before and after the lane was painted. The results showed that afternoon bus trips were shorter after the lane opened than before it.

Which choice best states the main idea of the text?

A) Ortega concludes that it is not the case that a dedicated bus lane is associated with shorter bus trips at rush hour.

B) The text's main point is that the study did not survey riders' satisfaction.

C) The text is mainly a set of instructions for how to carry out the following procedure: his team timed buses before and after the lane was painted.

D) Ortega's study supports the claim that a dedicated bus lane is associated with shorter bus trips at rush hour.

285. *Easy — stated detail*
Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters. Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out.

According to the text, which statement is true?

A) The text states that she did not test modern inks.

B) Cho reports that no result was collected.

C) It was not the case that the inked lines were often the places where the paper had cracked or fallen out.

D) The inked lines were often the places where the paper had cracked or fallen out.

286. *Medium — main idea of a literary text*
Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice best states the main idea of the text?

A) Ellis is relaxed and ready to leave now that the boats are in.

B) The passage is mainly an explanation of how to recoil a line.

C) Ellis stays on the pier, restless, watching for a boat that has not come in with the others.

D) The passage describes the history of the harbor bell.

287. *Easy — main idea of a study*
Dr. Andrei Sokolov has studied algae on a melting glacier. Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae.

Which choice best states the main idea of the text?

A) The text's main point is that the team did not compare air temperatures above the plots.

B) Sokolov's study supports the claim that darker algae on the ice is associated with faster local melt.

C) The text is mainly a set of instructions for how to carry out the following procedure: his team measured algae cover and melt on adjacent plots.

D) Sokolov concludes that it is not the case that darker algae on the ice is associated with faster local melt.

288. *Easy — stated detail*
Dr. Imani Cole has studied bees in rooftop hives and in a suburban park. Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count.

According to the text, which statement is true?

A) The rooftop count was higher than the park count.

B) It was not the case that the rooftop count was higher than the park count.

C) Cole reports that no result was collected.

D) The text states that one year cannot show whether the city is safer for bees over time.

289. *Medium — main idea of a literary text*
Lena labeled the last box and then opened it again to check the blue bowl. It was there, wrapped, where she had put it. She carried that box to the truck herself and set it behind the driver's seat, not with the stack of boxes she had told the movers to take.

Which choice best states the main idea of the text?

A) The passage is mainly a list of instructions for movers.

B) Lena is indifferent to whether the blue bowl arrives safely.

C) The passage argues that people should own fewer dishes.

D) Lena is taking special care to keep one fragile object with her during the move.

290. *Easy — main idea of a study*
Dr. Joan Ekstrom has studied a high school that moved its start time later. Ekstrom claims that a later start was associated with fewer first-period absences. In the study, she compared absence logs before and after the start moved from 7:30 to 8:30. The results showed that first-period absences fell in the semester after the change.

Which choice best states the main idea of the text?

A) Ekstrom's study supports the claim that a later start was associated with fewer first-period absences.

B) The text is mainly a set of instructions for how to carry out the following procedure: she compared absence logs before and after the start moved from 7:30 to 8:30.

C) Ekstrom concludes that it is not the case that a later start was associated with fewer first-period absences.

D) The text's main point is that she did not measure how long students actually slept.

291. *Easy — stated detail*
Dr. Andrei Sokolov has studied algae on a melting glacier. Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae.

According to the text, which statement is true?

A) It was not the case that plots with more algae lost more ice that week than plots with less algae.

B) Plots with more algae lost more ice that week than plots with less algae.

C) Sokolov reports that no result was collected.

D) The text states that the team did not compare air temperatures above the plots.

292. *Medium — main idea of a literary text*
James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice best states the main idea of the text?

A) The passage explains the postal schedule in James's town.

B) James comes close to sending an apology and then decides not to.

C) James mails the apology as soon as he finishes it.

D) The passage is mainly about how paper should be folded.

293. *Easy — main idea of a study*
Dr. Fatima Noor has studied small loans to market vendors. Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months.

Which choice best states the main idea of the text?

A) Noor concludes that it is not the case that vendors who received a loan were more likely to still be trading six months later than vendors who did not.

B) The text's main point is that the study does not show that every loan was spent on the business.

C) The text is mainly a set of instructions for how to carry out the following procedure: she followed two groups of vendors who had applied to the same program.

D) Noor's study supports the claim that vendors who received a loan were more likely to still be trading six months later than vendors who did not.

294. *Easy — stated detail*
Dr. Marco Bell has studied clay pots from a riverside workshop. Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots.

According to the text, which statement is true?

A) The text states that he did not test whether the pots survived later use over a fire.

B) It was not the case that fewer shell-tempered pots cracked than sand-tempered pots.

C) Fewer shell-tempered pots cracked than sand-tempered pots.

D) Bell reports that no result was collected.

295. *Medium — main idea of a literary text*
After the guests left, Rosa stayed in the kitchen and washed the same plate twice. The good glasses were still in the cupboard; she had served water in ordinary cups. She turned the porch light off only when the street was empty.

Which choice best states the main idea of the text?

A) Rosa is relieved and careless now that the guests have gone.

B) The passage is mainly a set of instructions for washing plates.

C) Rosa's actions after the gathering suggest she had been anxious about the guests.

D) The passage compares Rosa's cooking with her neighbor's.

296. *Easy — main idea of a study*
Dr. Edith Lang has studied county health reports from 1957. Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. In the study, she compared the county's own case counts for the two summers. The results showed that the count of new cases was lower in the summer after the clinics.

Which choice best states the main idea of the text?

A) The text's main point is that a drop in one county's report does not by itself prove the clinics caused it.

B) Lang's study supports the claim that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.

C) The text is mainly a set of instructions for how to carry out the following procedure: she compared the county's own case counts for the two summers.

D) Lang concludes that it is not the case that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.

297. *Easy — stated detail*
Dr. Nora Feldman has studied a reef after a heat wave. Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them.

According to the text, which statement is true?

A) It was not the case that colonies that kept their algae stayed darker than colonies that expelled them.

B) Feldman reports that no result was collected.

C) Colonies that kept their algae stayed darker than colonies that expelled them.

D) The text states that the divers did not measure fish counts on the reef.

298. *Medium — main idea of a literary text*
On the late bus, Malik reread the sentence he had underlined that morning. At his stop he did not get off. He rode to the end of the line, still mouthing the words, and only then walked back toward home.

Which choice best states the main idea of the text?

A) Malik puts the reading aside and gets off promptly at his stop.

B) Malik is so caught up in a sentence from his reading that he misses his stop.

C) The passage is mainly a description of the bus route.

D) The passage argues that the city should add more bus lines.

299. *Easy — main idea of a study*
Dr. Leo Martins has studied a restored wetland beside a river. Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry.

Which choice best states the main idea of the text?

A) The text's main point is that the gauges were not left in place over the winter.

B) The text is mainly a set of instructions for how to carry out the following procedure: gauges recorded water depth in the wetland and on the road during the same storm.

C) Martins concludes that it is not the case that the wetland held floodwater that would otherwise have reached the road.

D) Martins's study supports the claim that the wetland held floodwater that would otherwise have reached the road.

300. *Easy — stated detail*
Dr. Fatima Noor has studied small loans to market vendors. Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months.

According to the text, which statement is true?

A) The text states that the study does not show that every loan was spent on the business.

B) A larger share of the loan group was still trading after six months.

C) It was not the case that a larger share of the loan group was still trading after six months.

D) Noor reports that no result was collected.

301. *Medium — main idea of a literary text*
Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice best states the main idea of the text?

A) Anya uses a repeated walk on the stage to steady herself before the performance.

B) Anya is calm from the start and uninterested in the stage.

C) The passage is mainly a description of a table used as a prop.

D) The passage explains how a theater curtain is operated.

302. *Easy — main idea of a study*
Dr. Miguel Santos has studied steel bridges in hot weather. Santos claims that bridge decks grew longer on hot afternoons than on cool mornings. In the study, crews measured the same joints at dawn and at midafternoon. The results showed that the gaps at the joints were narrower in the afternoon than at dawn.

Which choice best states the main idea of the text?

A) Santos concludes that it is not the case that bridge decks grew longer on hot afternoons than on cool mornings.

B) The text's main point is that the crews did not measure traffic weight.

C) Santos's study supports the claim that bridge decks grew longer on hot afternoons than on cool mornings.

D) The text is mainly a set of instructions for how to carry out the following procedure: crews measured the same joints at dawn and at midafternoon.

303. *Easy — stated detail*
Dr. Alice Peng has studied rehearsal notes for a 1936 production. Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand.

According to the text, which statement is true?

A) The text states that the notes do not say whether audiences liked the shorter version.

B) The cut scene was the one marked 'too long' in the director's hand.

C) Peng reports that no result was collected.

D) It was not the case that the cut scene was the one marked 'too long' in the director's hand.

304. *Medium — main idea of a literary text*
The book had been due for a month. Sam slid it across the counter without the excuse he had rehearsed. The librarian stamped it, said nothing about the fine, and Sam, who had expected a lecture, thanked her twice.

Which choice best states the main idea of the text?

A) The passage is mainly about how a library stamp works.

B) The passage explains the library's hours.

C) Sam returns a late book braced for a scolding that does not come.

D) Sam argues with the librarian about a fine.

305. *Easy — main idea of a study*
Dr. Karen Ito has studied a city that stopped charging library overdue fines. Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended.

Which choice best states the main idea of the text?

A) The text is mainly a set of instructions for how to carry out the following procedure: the library compared return counts for the two periods.

B) Ito concludes that it is not the case that more overdue books came back in the months after fines ended than in the months before.

C) The text's main point is that other changes, including longer open hours, happened in the same months.

D) Ito's study supports the claim that more overdue books came back in the months after fines ended than in the months before.

306. *Easy — stated detail*
Dr. Rosa Nguyen has studied willows in a valley where wolves had returned. Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings.

According to the text, which statement is true?

A) The text states that she did not measure bird nests in the willows.

B) Nguyen reports that no result was collected.

C) It was not the case that banks with fewer signs of browsing had taller willow seedlings.

D) Banks with fewer signs of browsing had taller willow seedlings.

307. *Medium — main idea of a literary text*
It was still dark when Mr. Okonkwo unlocked the bakery. He set aside the first tray, the one with the cracked edge, for his own breakfast, and he put the even loaves in the window. By the time the streetlight went out, the window was full and the cracked tray was already half gone.

Which choice best states the main idea of the text?

A) The passage explains the price of bread in the town.

B) Mr. Okonkwo puts the cracked loaves in the window and keeps the best for himself.

C) The passage is mainly about a broken streetlight.

D) Mr. Okonkwo prepares the display with care, keeping the imperfect tray for himself.

308. *Easy — main idea of a study*
Dr. Naomi Feldman has studied two oral versions of a star story. Feldman claims that the two communities tell different stories about the same group of stars. In the study, she recorded tellers in both communities while they pointed out the stars. The results showed that the named stars match, and the plots of the stories do not.

Which choice best states the main idea of the text?

A) Feldman concludes that it is not the case that the two communities tell different stories about the same group of stars.

B) The text's main point is that she did not claim that one story is older than the other.

C) Feldman's study supports the claim that the two communities tell different stories about the same group of stars.

D) The text is mainly a set of instructions for how to carry out the following procedure: she recorded tellers in both communities while they pointed out the stars.

309. *Easy — stated detail*
Dr. Leo Martins has studied a restored wetland beside a river. Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry.

According to the text, which statement is true?

A) Martins reports that no result was collected.

B) It was not the case that the wetland depth rose while the road remained dry.

C) The wetland depth rose while the road remained dry.

D) The text states that the gauges were not left in place over the winter.

310. *Medium — main idea of a literary text*
The museum had closed, but Dana stayed on the step with her sketch of the statue she had not been allowed to finish. She added the hand from memory and then erased it. The guard who locked the side door nodded at the page and did not tell her to leave.

Which choice best states the main idea of the text?

A) The passage gives the history of the statue.

B) Dana continues working, from memory and with revision, on a sketch the closing of the museum interrupted.

C) The passage is mainly about a guard's duties.

D) Dana is glad the museum closed because she did not want to finish the sketch.

311. *Easy — main idea of a study*
Dr. Paolo Ricci has studied seedlings grown with soil fungi. Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks.

Which choice best states the main idea of the text?

A) The text is mainly a set of instructions for how to carry out the following procedure: he used the same soil, light, and water, and added the fungi only to one group.

B) Ricci's study supports the claim that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them.

C) Ricci concludes that it is not the case that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them.

D) The text's main point is that he did not measure the seedlings' survival through winter.

312. *Easy — stated detail*
Dr. Sophie Bernard has studied passive voice in lab reports. Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain.

According to the text, which statement is true?

A) The text states that she did not test whether scientists themselves prefer one voice.

B) It was not the case that readers rated the passive versions as more certain.

C) Bernard reports that no result was collected.

D) Readers rated the passive versions as more certain.

313. *Easy — main idea of a study*
Dr. Irene Solano has studied pigment on an outdoor fresco. Solano claims that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment. In the study, she compared shaded and sunny parts of the same wall. The results showed that the sunny red sections had lightened more than the sunny earth-colored sections.

Which choice best states the main idea of the text?

A) The text's main point is that she did not remove any pigment for a laboratory test.

B) The text is mainly a set of instructions for how to carry out the following procedure: she compared shaded and sunny parts of the same wall.

C) Solano concludes that it is not the case that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment.

D) Solano's study supports the claim that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment.

314. *Easy — stated detail*
Dr. June Harlow has studied murals painted for public buildings in the 1930s. Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. In the study, she compared contract language with dated sketches. The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work.

According to the text, which statement is true?

A) The text states that she did not interview anyone who watched the murals being painted.

B) It was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.

C) Harlow reports that no result was collected.

D) The sketches show occupations named in the contracts, such as harvesting and mill work.

315. *Easy — main idea of a study*
Dr. Ellen Zhou has studied dust layers in an ice core. Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry.

Which choice best states the main idea of the text?

A) The text's main point is that the core does not name the source of every grain of dust.

B) Zhou concludes that it is not the case that thicker dust layers in the core line up with years the nearby valley recorded as drought.

C) Zhou's study supports the claim that thicker dust layers in the core line up with years the nearby valley recorded as drought.

D) The text is mainly a set of instructions for how to carry out the following procedure: she matched dated layers in the ice with the valley's harvest notes.

316. *Easy — stated detail*
Dr. Karen Ito has studied a city that stopped charging library overdue fines. Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended.

According to the text, which statement is true?

A) It was not the case that returns of overdue books rose after fines ended.

B) Ito reports that no result was collected.

C) The text states that other changes, including longer open hours, happened in the same months.

D) Returns of overdue books rose after fines ended.

317. *Easy — main idea of a study*
Dr. Rachel Stein has studied a reminder text and missed clinic appointments. Stein claims that clinics that sent a reminder text had fewer missed appointments the next month. In the study, she compared clinics that started texting with clinics that did not. The results showed that the texting clinics had a lower miss rate.

Which choice best states the main idea of the text?

A) The text's main point is that the comparison does not isolate the text from the new evening hour.

B) Stein concludes that it is not the case that clinics that sent a reminder text had fewer missed appointments the next month.

C) Stein's study supports the claim that clinics that sent a reminder text had fewer missed appointments the next month.

D) The text is mainly a set of instructions for how to carry out the following procedure: she compared clinics that started texting with clinics that did not.

318. *Easy — stated detail*
Dr. Clara Mendes has studied a 1602 coastal chart. Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey.

According to the text, which statement is true?

A) The text states that she did not claim the coastline itself had moved.

B) The bay drawn in 1602 sits east of the bay on the later survey.

C) Mendes reports that no result was collected.

D) It was not the case that the bay drawn in 1602 sits east of the bay on the later survey.

319. *Easy — main idea of a study*
Dr. Angela Brooks has studied audience copies of a poem and library loans of the same book. Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before.

Which choice best states the main idea of the text?

A) The text's main point is that the loan records do not show whether the borrowers attended the reading.

B) Brooks's study supports the claim that loans of the book rose in the month after a public reading and fell again later.

C) The text is mainly a set of instructions for how to carry out the following procedure: she compared monthly loan counts with the date of the reading.

D) Brooks concludes that it is not the case that loans of the book rose in the month after a public reading and fell again later.

320. *Easy — stated detail*
Dr. Yara Hassan has studied compost piles and weed seeds. Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. In the study, she buried seed packets at measured temperatures and then tried to sprout them. The results showed that fewer seeds sprouted from the hot center than from the cool edge.

According to the text, which statement is true?

A) The text states that she did not test crop seeds that a gardener might want to survive.

B) Hassan reports that no result was collected.

C) It was not the case that fewer seeds sprouted from the hot center than from the cool edge.

D) Fewer seeds sprouted from the hot center than from the cool edge.

321. *Easy — main idea of a study*
Dr. Olivia Grant has studied tutoring hours and a skills quiz. Grant claims that students who attended more tutoring hours scored higher on the quiz given that Friday. In the study, the school logged hours and quiz scores for one class. The results showed that higher hours lined up with higher scores.

Which choice best states the main idea of the text?

A) Grant's study supports the claim that students who attended more tutoring hours scored higher on the quiz given that Friday.

B) The text's main point is that the log does not show that the tutoring produced the scores.

C) The text is mainly a set of instructions for how to carry out the following procedure: the school logged hours and quiz scores for one class.

D) Grant concludes that it is not the case that students who attended more tutoring hours scored higher on the quiz given that Friday.

322. *Easy — stated detail*
Dr. Paolo Ricci has studied seedlings grown with soil fungi. Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks.

According to the text, which statement is true?

A) Ricci reports that no result was collected.

B) It was not the case that the fungi group weighed more at eight weeks.

C) The text states that he did not measure the seedlings' survival through winter.

D) The fungi group weighed more at eight weeks.

323. *Easy — main idea of a study*
Dr. Hassan Ali has studied a windbreak of shrubs beside crop rows. Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. In the study, he collected soil at several distances after one storm. The results showed that the rows nearest the shrubs lost less soil than the open rows.

Which choice best states the main idea of the text?

A) Ali concludes that it is not the case that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open.

B) Ali's study supports the claim that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open.

C) The text is mainly a set of instructions for how to carry out the following procedure: he collected soil at several distances after one storm.

D) The text's main point is that he did not measure the crop's yield.

324. *Easy — stated detail*
Dr. Sara Lind has studied a reading-speed test of two typefaces. Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same.

According to the text, which statement is true?

A) Lind reports that no result was collected.

B) Average times for the two typefaces were nearly the same.

C) The text states that the study did not include children.

D) It was not the case that average times for the two typefaces were nearly the same.

325. *Easy — main idea of a study*
Dr. Christine Dahl has studied a cap on class size in an after-school program. Dahl claims that sections kept under fifteen students had higher completion rates than larger sections of the same course. In the study, she compared completion in sections of the same subject. The results showed that the smaller sections finished a larger share of students.

Which choice best states the main idea of the text?

A) The text's main point is that the comparison does not separate class size from the instructor.

B) Dahl's study supports the claim that sections kept under fifteen students had higher completion rates than larger sections of the same course.

C) The text is mainly a set of instructions for how to carry out the following procedure: she compared completion in sections of the same subject.

D) Dahl concludes that it is not the case that sections kept under fifteen students had higher completion rates than larger sections of the same course.

326. *Easy — stated detail*
Dr. Brian Holt has studied helmet use and head injuries in a city bike-share program. Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet.

According to the text, which statement is true?

A) Holt reports that no result was collected.

B) The text states that the survey cannot separate the helmet from the other habits of the riders who wear one.

C) Helmeted riders reported fewer head injuries than riders who reported no helmet.

D) It was not the case that helmeted riders reported fewer head injuries than riders who reported no helmet.

327. *Easy — main idea of a study*
Dr. Anita Shah has studied ration cards and a grocer's ledger from 1943. Shah claims that the ledger records more sugar sold on days the ledger also notes a card inspection. In the study, she totaled sales on inspection days and on ordinary days in the same month. The results showed that sugar sales were higher on the inspection days.

Which choice best states the main idea of the text?

A) Shah's study supports the claim that the ledger records more sugar sold on days the ledger also notes a card inspection.

B) The text's main point is that the ledger cannot show that inspectors caused shoppers to buy.

C) The text is mainly a set of instructions for how to carry out the following procedure: she totaled sales on inspection days and on ordinary days in the same month.

D) Shah concludes that it is not the case that the ledger records more sugar sold on days the ledger also notes a card inspection.

328. *Easy — stated detail*
Dr. Ellen Zhou has studied dust layers in an ice core. Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry.

According to the text, which statement is true?

A) It was not the case that the thickest dust layers fell in years the notes call dry.

B) The thickest dust layers fell in years the notes call dry.

C) The text states that the core does not name the source of every grain of dust.

D) Zhou reports that no result was collected.

329. *Medium — main idea of a study*
Dr. Priya Raman has studied afternoon pavement temperatures in one neighborhood. Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. In the study, she measured pavement temperature on tree-lined blocks and on bare blocks. The results showed that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

Which choice best states the main idea of the text?

A) Raman's study supports the claim that blocks with street trees have cooler midafternoon pavement than blocks without them.

B) The text's main point is that she did not measure temperatures inside houses.

C) Raman concludes that it is not the case that blocks with street trees have cooler midafternoon pavement than blocks without them.

D) The text is mainly a set of instructions for how to carry out the following procedure: she measured pavement temperature on tree-lined blocks and on bare blocks.

330. *Easy — stated detail*
Dr. Nadia Korol has studied desert varnish on sunlit rocks. Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

According to the text, which statement is true?

A) Rocks that dried slowly had thicker varnish than rocks that dried within an hour.

B) It was not the case that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

C) The text states that she did not determine whether microbes or chemistry laid the varnish down.

D) Korol reports that no result was collected.

331. *Medium — main idea of a study*
Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters. Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out.

Which choice best states the main idea of the text?

A) The text's main point is that she did not test modern inks.

B) Cho concludes that it is not the case that iron-gall ink is associated with holes and cracks in the paper beneath it.

C) The text is mainly a set of instructions for how to carry out the following procedure: she examined letters whose ink had been identified as iron gall.

D) Cho's study supports the claim that iron-gall ink is associated with holes and cracks in the paper beneath it.

332. *Easy — stated detail*
Dr. Sylvia Markham has studied recipes in an eighteenth-century household book. Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. In the study, she sorted the dated recipes by the season written beside them. The results showed that winter recipes list dried fruit more often and fresh herbs less often.

According to the text, which statement is true?

A) The text states that the book does not say which recipes were actually cooked.

B) Markham reports that no result was collected.

C) It was not the case that winter recipes list dried fruit more often and fresh herbs less often.

D) Winter recipes list dried fruit more often and fresh herbs less often.

333. *Medium — main idea of a study*
Dr. Imani Cole has studied bees in rooftop hives and in a suburban park. Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count.

Which choice best states the main idea of the text?

A) Cole's study supports the claim that rooftop hives in that city hold more bee species than the nearby park.

B) Cole concludes that it is not the case that rooftop hives in that city hold more bee species than the nearby park.

C) The text's main point is that one year cannot show whether the city is safer for bees over time.

D) The text is mainly a set of instructions for how to carry out the following procedure: her team counted bee species in the hives and in the park.

334. *Easy — stated detail*
Dr. Angela Brooks has studied audience copies of a poem and library loans of the same book. Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before.

According to the text, which statement is true?

A) The loan count was higher in the month after the reading than in the month before.

B) Brooks reports that no result was collected.

C) The text states that the loan records do not show whether the borrowers attended the reading.

D) It was not the case that the loan count was higher in the month after the reading than in the month before.

335. *Medium — main idea of a study*
Dr. Nina Patel has studied turnout in a local election. Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard.

Which choice best states the main idea of the text?

A) Patel concludes that it is not the case that a mailed reminder is associated with slightly higher turnout.

B) The text is mainly a set of instructions for how to carry out the following procedure: she compared precincts that received a postcard with precincts that did not.

C) Patel's study supports the claim that a mailed reminder is associated with slightly higher turnout.

D) The text's main point is that the study cannot show that every recipient read the card.

336. *Easy — stated detail*
Dr. William Drake has studied ship manifests and a passenger diary from 1850. Drake claims that the diary names more children in one family than the manifest lists for that surname. In the study, he lined up the surname in both documents. The results showed that the diary lists three children and the manifest lists two.

According to the text, which statement is true?

A) The diary lists three children and the manifest lists two.

B) The text states that he cannot tell whether a child was born during the voyage.

C) It was not the case that the diary lists three children and the manifest lists two.

D) Drake reports that no result was collected.

337. *Medium — main idea of a study*
Dr. Grace Adeyemi has studied students who switch languages during class discussion. Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. In the study, she recorded discussions and then scored the written summaries. The results showed that summaries from students who had switched languages scored as high as summaries from students who had not.

Which choice best states the main idea of the text?

A) The text's main point is that the study did not score spoken answers on the exam.

B) The text is mainly a set of instructions for how to carry out the following procedure: she recorded discussions and then scored the written summaries.

C) Adeyemi concludes that it is not the case that students who switched languages in discussion still wrote clear summaries in the language of the exam.

D) Adeyemi's study supports the claim that students who switched languages in discussion still wrote clear summaries in the language of the exam.

338. *Easy — stated detail*
Dr. Felix Nguyen has studied mussels on a rocky shore. Nguyen claims that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day. In the study, he measured mussels at marked heights on the same rock. The results showed that mussels lower down, in the wetter band, were larger.

According to the text, which statement is true?

A) Mussels lower down, in the wetter band, were larger.

B) It was not the case that mussels lower down, in the wetter band, were larger.

C) Nguyen reports that no result was collected.

D) The text states that he did not count the birds that eat mussels.

339. *Medium — main idea of a study*
Dr. Marco Bell has studied clay pots from a riverside workshop. Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots.

Which choice best states the main idea of the text?

A) Bell's study supports the claim that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.

B) The text is mainly a set of instructions for how to carry out the following procedure: he fired matched vessels that differed only in the temper added to the clay.

C) The text's main point is that he did not test whether the pots survived later use over a fire.

D) Bell concludes that it is not the case that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.

340. *Easy — stated detail*
Dr. Hassan Ali has studied a windbreak of shrubs beside crop rows. Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. In the study, he collected soil at several distances after one storm. The results showed that the rows nearest the shrubs lost less soil than the open rows.

According to the text, which statement is true?

A) Ali reports that no result was collected.

B) The text states that he did not measure the crop's yield.

C) The rows nearest the shrubs lost less soil than the open rows.

D) It was not the case that the rows nearest the shrubs lost less soil than the open rows.

Information and Ideas: Command of Evidence (Textual)

341. *Medium — new finding that supports a claim*
Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish.

Which finding, if true, would most directly support the claim?

A) The research team included graduate students.

B) It was not the case that juvenile counts were higher in standing kelp than on bare rock.

C) The divers did not count adult rockfish.

D) Juvenile counts were higher in standing kelp than on bare rock.

342. *Medium — quotation that supports the claim*
Dr. Elena Voss has studied kelp forests along the California coast. Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock.

Which quotation from the text most directly supports the claim in the first sentence?

A) In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock.

B) The results showed that juvenile counts were higher in standing kelp than on bare rock.

C) The results showed that it was not the case that juvenile counts were higher in standing kelp than on bare rock.

D) Dr. Elena Voss has studied kelp forests along the California coast.

343. *Hard — new finding that weakens a claim*
Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of kelp forests along the California coast.

B) It was not the case that juvenile counts were higher in standing kelp than on bare rock.

C) The research team included graduate students.

D) Juvenile counts were higher in standing kelp than on bare rock.

344. *Medium — new finding that supports a claim*
Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them.

Which finding, if true, would most directly support the claim?

A) Pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

B) She did not measure temperatures inside houses.

C) It was not the case that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

D) The research team included graduate students.

345. *Medium — quotation that supports the claim*
Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters. Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that the inked lines were often the places where the paper had cracked or fallen out.

B) Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters.

C) The results showed that the inked lines were often the places where the paper had cracked or fallen out.

D) In the study, she examined letters whose ink had been identified as iron gall.

346. *Hard — new finding that weakens a claim*
Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them.

Which finding, if true, would most directly weaken the claim?

A) Pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

B) The research team included graduate students.

C) It was not the case that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

D) The study was conducted in the area of afternoon pavement temperatures in one neighborhood.

347. *Medium — new finding that supports a claim*
Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it.

Which finding, if true, would most directly support the claim?

A) She did not test modern inks.

B) The research team included graduate students.

C) It was not the case that the inked lines were often the places where the paper had cracked or fallen out.

D) The inked lines were often the places where the paper had cracked or fallen out.

348. *Medium — quotation that supports the claim*
Dr. Imani Cole has studied bees in rooftop hives and in a suburban park. Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count.

Which quotation from the text most directly supports the claim in the first sentence?

A) Dr. Imani Cole has studied bees in rooftop hives and in a suburban park.

B) The results showed that the rooftop count was higher than the park count.

C) The results showed that it was not the case that the rooftop count was higher than the park count.

D) In the study, her team counted bee species in the hives and in the park.

349. *Hard — new finding that weakens a claim*
Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it.

Which finding, if true, would most directly weaken the claim?

A) It was not the case that the inked lines were often the places where the paper had cracked or fallen out.

B) The study was conducted in the area of iron-gall ink on nineteenth-century letters.

C) The research team included graduate students.

D) The inked lines were often the places where the paper had cracked or fallen out.

350. *Medium — new finding that supports a claim*
Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour.

Which finding, if true, would most directly support the claim?

A) Afternoon bus trips were shorter after the lane opened than before it.

B) It was not the case that afternoon bus trips were shorter after the lane opened than before it.

C) The research team included graduate students.

D) The study did not survey riders' satisfaction.

351. *Medium — quotation that supports the claim*
Dr. Andrei Sokolov has studied algae on a melting glacier. Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that plots with more algae lost more ice that week than plots with less algae.

B) The results showed that it was not the case that plots with more algae lost more ice that week than plots with less algae.

C) In the study, his team measured algae cover and melt on adjacent plots.

D) Dr. Andrei Sokolov has studied algae on a melting glacier.

352. *Hard — new finding that weakens a claim*
Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of bus trips on Center Avenue.

B) It was not the case that afternoon bus trips were shorter after the lane opened than before it.

C) The research team included graduate students.

D) Afternoon bus trips were shorter after the lane opened than before it.

353. *Medium — new finding that supports a claim*
Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park.

Which finding, if true, would most directly support the claim?

A) One year cannot show whether the city is safer for bees over time.

B) The rooftop count was higher than the park count.

C) The research team included graduate students.

D) It was not the case that the rooftop count was higher than the park count.

354. *Medium — quotation that supports the claim*
Dr. Marco Bell has studied clay pots from a riverside workshop. Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots.

Which quotation from the text most directly supports the claim in the first sentence?

A) In the study, he fired matched vessels that differed only in the temper added to the clay.

B) The results showed that fewer shell-tempered pots cracked than sand-tempered pots.

C) The results showed that it was not the case that fewer shell-tempered pots cracked than sand-tempered pots.

D) Dr. Marco Bell has studied clay pots from a riverside workshop.

355. *Hard — new finding that weakens a claim*
Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park.

Which finding, if true, would most directly weaken the claim?

A) The rooftop count was higher than the park count.

B) The research team included graduate students.

C) The study was conducted in the area of bees in rooftop hives and in a suburban park.

D) It was not the case that the rooftop count was higher than the park count.

356. *Medium — new finding that supports a claim*
Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout.

Which finding, if true, would most directly support the claim?

A) Turnout was higher in the precincts that received the postcard.

B) It was not the case that turnout was higher in the precincts that received the postcard.

C) The study cannot show that every recipient read the card.

D) The research team included graduate students.

357. *Medium — quotation that supports the claim*
Dr. Nora Feldman has studied a reef after a heat wave. Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that colonies that kept their algae stayed darker than colonies that expelled them.

B) The results showed that colonies that kept their algae stayed darker than colonies that expelled them.

C) In the study, divers recorded color and algae on tagged colonies.

D) Dr. Nora Feldman has studied a reef after a heat wave.

358. *Hard — new finding that weakens a claim*
Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout.

Which finding, if true, would most directly weaken the claim?

A) It was not the case that turnout was higher in the precincts that received the postcard.

B) The study was conducted in the area of turnout in a local election.

C) The research team included graduate students.

D) Turnout was higher in the precincts that received the postcard.

359. *Medium — new finding that supports a claim*
Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt.

Which finding, if true, would most directly support the claim?

A) It was not the case that plots with more algae lost more ice that week than plots with less algae.

B) Plots with more algae lost more ice that week than plots with less algae.

C) The research team included graduate students.

D) The team did not compare air temperatures above the plots.

360. *Medium — quotation that supports the claim*
Dr. Fatima Noor has studied small loans to market vendors. Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that a larger share of the loan group was still trading after six months.

B) In the study, she followed two groups of vendors who had applied to the same program.

C) The results showed that a larger share of the loan group was still trading after six months.

D) Dr. Fatima Noor has studied small loans to market vendors.

361. *Hard — new finding that weakens a claim*
Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt.

Which finding, if true, would most directly weaken the claim?

A) Plots with more algae lost more ice that week than plots with less algae.

B) The study was conducted in the area of algae on a melting glacier.

C) It was not the case that plots with more algae lost more ice that week than plots with less algae.

D) The research team included graduate students.

362. *Medium — new finding that supports a claim*
Dr. Grace Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam.

Which finding, if true, would most directly support the claim?

A) Summaries from students who had switched languages scored as high as summaries from students who had not.

B) The study did not score spoken answers on the exam.

C) The research team included graduate students.

D) It was not the case that summaries from students who had switched languages scored as high as summaries from students who had not.

363. *Medium — quotation that supports the claim*
Dr. Alice Peng has studied rehearsal notes for a 1936 production. Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand.

Which quotation from the text most directly supports the claim in the first sentence?

A) In the study, the notes record the timing of each act and the reason written beside the cut.

B) The results showed that the cut scene was the one marked 'too long' in the director's hand.

C) Dr. Alice Peng has studied rehearsal notes for a 1936 production.

D) The results showed that it was not the case that the cut scene was the one marked 'too long' in the director's hand.

364. *Hard — new finding that weakens a claim*
Dr. Grace Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam.

Which finding, if true, would most directly weaken the claim?

A) The research team included graduate students.

B) Summaries from students who had switched languages scored as high as summaries from students who had not.

C) It was not the case that summaries from students who had switched languages scored as high as summaries from students who had not.

D) The study was conducted in the area of students who switch languages during class discussion.

365. *Medium — new finding that supports a claim*
Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.

Which finding, if true, would most directly support the claim?

A) It was not the case that fewer shell-tempered pots cracked than sand-tempered pots.

B) The research team included graduate students.

C) He did not test whether the pots survived later use over a fire.

D) Fewer shell-tempered pots cracked than sand-tempered pots.

366. *Medium — quotation that supports the claim*
Dr. Rosa Nguyen has studied willows in a valley where wolves had returned. Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that banks with fewer signs of browsing had taller willow seedlings.

B) In the study, she measured seedling height and signs of browsing on the same banks.

C) The results showed that banks with fewer signs of browsing had taller willow seedlings.

D) Dr. Rosa Nguyen has studied willows in a valley where wolves had returned.

367. *Hard — new finding that weakens a claim*
Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of clay pots from a riverside workshop.

B) The research team included graduate students.

C) It was not the case that fewer shell-tempered pots cracked than sand-tempered pots.

D) Fewer shell-tempered pots cracked than sand-tempered pots.

368. *Medium — new finding that supports a claim*
Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences.

Which finding, if true, would most directly support the claim?

A) She did not measure how long students actually slept.

B) It was not the case that first-period absences fell in the semester after the change.

C) The research team included graduate students.

D) First-period absences fell in the semester after the change.

369. *Medium — quotation that supports the claim*
Dr. Leo Martins has studied a restored wetland beside a river. Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that the wetland depth rose while the road remained dry.

B) The results showed that it was not the case that the wetland depth rose while the road remained dry.

C) In the study, gauges recorded water depth in the wetland and on the road during the same storm.

D) Dr. Leo Martins has studied a restored wetland beside a river.

370. *Hard — new finding that weakens a claim*
Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences.

Which finding, if true, would most directly weaken the claim?

A) It was not the case that first-period absences fell in the semester after the change.

B) First-period absences fell in the semester after the change.

C) The study was conducted in the area of a high school that moved its start time later.

D) The research team included graduate students.

371. *Medium — new finding that supports a claim*
Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them.

Which finding, if true, would most directly support the claim?

A) The research team included graduate students.

B) The divers did not measure fish counts on the reef.

C) Colonies that kept their algae stayed darker than colonies that expelled them.

D) It was not the case that colonies that kept their algae stayed darker than colonies that expelled them.

372. *Medium — quotation that supports the claim*
Dr. Sophie Bernard has studied passive voice in lab reports. Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that readers rated the passive versions as more certain.

B) Dr. Sophie Bernard has studied passive voice in lab reports.

C) In the study, she gave readers matched reports that differed only in voice.

D) The results showed that readers rated the passive versions as more certain.

373. *Hard — new finding that weakens a claim*
Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them.

Which finding, if true, would most directly weaken the claim?

A) Colonies that kept their algae stayed darker than colonies that expelled them.

B) It was not the case that colonies that kept their algae stayed darker than colonies that expelled them.

C) The research team included graduate students.

D) The study was conducted in the area of a reef after a heat wave.

374. *Medium — new finding that supports a claim*
Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics.

Which finding, if true, would most directly support the claim?

A) The research team included graduate students.

B) She did not compare cylinders of music with cylinders of speech.

C) More words were intelligible on the cool-room cylinders than on the attic cylinders.

D) It was not the case that more words were intelligible on the cool-room cylinders than on the attic cylinders.

375. *Medium — quotation that supports the claim*
Dr. June Harlow has studied murals painted for public buildings in the 1930s. Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. In the study, she compared contract language with dated sketches. The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work.

B) Dr. June Harlow has studied murals painted for public buildings in the 1930s.

C) The results showed that it was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.

D) In the study, she compared contract language with dated sketches.

376. *Hard — new finding that weakens a claim*
Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics.

Which finding, if true, would most directly weaken the claim?

A) The research team included graduate students.

B) More words were intelligible on the cool-room cylinders than on the attic cylinders.

C) It was not the case that more words were intelligible on the cool-room cylinders than on the attic cylinders.

D) The study was conducted in the area of wax-cylinder recordings from the 1890s.

377. *Medium — new finding that supports a claim*
Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not.

Which finding, if true, would most directly support the claim?

A) It was not the case that a larger share of the loan group was still trading after six months.

B) The study does not show that every loan was spent on the business.

C) The research team included graduate students.

D) A larger share of the loan group was still trading after six months.

378. *Medium — quotation that supports the claim*
Dr. Karen Ito has studied a city that stopped charging library overdue fines. Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that returns of overdue books rose after fines ended.

B) Dr. Karen Ito has studied a city that stopped charging library overdue fines.

C) The results showed that it was not the case that returns of overdue books rose after fines ended.

D) In the study, the library compared return counts for the two periods.

379. *Hard — new finding that weakens a claim*
Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not.

Which finding, if true, would most directly weaken the claim?

A) It was not the case that a larger share of the loan group was still trading after six months.

B) The study was conducted in the area of small loans to market vendors.

C) The research team included graduate students.

D) A larger share of the loan group was still trading after six months.

380. *Medium — new finding that supports a claim*
Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday.

Which finding, if true, would most directly support the claim?

A) The research team included graduate students.

B) The team did not measure winter temperatures.

C) It was not the case that blocks with more canopy had cooler midday surfaces.

D) Blocks with more canopy had cooler midday surfaces.

381. *Medium — quotation that supports the claim*
Dr. Clara Mendes has studied a 1602 coastal chart. Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey.

Which quotation from the text most directly supports the claim in the first sentence?

A) Dr. Clara Mendes has studied a 1602 coastal chart.

B) The results showed that the bay drawn in 1602 sits east of the bay on the later survey.

C) In the study, she overlaid the chart on a nineteenth-century survey of the same coast.

D) The results showed that it was not the case that the bay drawn in 1602 sits east of the bay on the later survey.

382. *Hard — new finding that weakens a claim*
Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday.

Which finding, if true, would most directly weaken the claim?

A) The research team included graduate students.

B) The study was conducted in the area of summer surface temperatures under city trees.

C) It was not the case that blocks with more canopy had cooler midday surfaces.

D) Blocks with more canopy had cooler midday surfaces.

383. *Medium — new finding that supports a claim*
Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours.

Which finding, if true, would most directly support the claim?

A) The notes do not say whether audiences liked the shorter version.

B) It was not the case that the cut scene was the one marked 'too long' in the director's hand.

C) The research team included graduate students.

D) The cut scene was the one marked 'too long' in the director's hand.

384. *Medium — quotation that supports the claim*
Dr. Yara Hassan has studied compost piles and weed seeds. Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. In the study, she buried seed packets at measured temperatures and then tried to sprout them. The results showed that fewer seeds sprouted from the hot center than from the cool edge.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that fewer seeds sprouted from the hot center than from the cool edge.

B) In the study, she buried seed packets at measured temperatures and then tried to sprout them.

C) The results showed that it was not the case that fewer seeds sprouted from the hot center than from the cool edge.

D) Dr. Yara Hassan has studied compost piles and weed seeds.

385. *Hard — new finding that weakens a claim*
Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours.

Which finding, if true, would most directly weaken the claim?

A) It was not the case that the cut scene was the one marked 'too long' in the director's hand.

B) The cut scene was the one marked 'too long' in the director's hand.

C) The study was conducted in the area of rehearsal notes for a 1936 production.

D) The research team included graduate students.

386. *Medium — new finding that supports a claim*
Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.

Which finding, if true, would most directly support the claim?

A) The count of new cases was lower in the summer after the clinics.

B) It was not the case that the count of new cases was lower in the summer after the clinics.

C) A drop in one county's report does not by itself prove the clinics caused it.

D) The research team included graduate students.

387. *Medium — quotation that supports the claim*
Dr. Paolo Ricci has studied seedlings grown with soil fungi. Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that the fungi group weighed more at eight weeks.

B) In the study, he used the same soil, light, and water, and added the fungi only to one group.

C) Dr. Paolo Ricci has studied seedlings grown with soil fungi.

D) The results showed that the fungi group weighed more at eight weeks.

388. *Hard — new finding that weakens a claim*
Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of county health reports from 1957.

B) It was not the case that the count of new cases was lower in the summer after the clinics.

C) The research team included graduate students.

D) The count of new cases was lower in the summer after the clinics.

389. *Medium — new finding that supports a claim*
Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned.

Which finding, if true, would most directly support the claim?

A) The research team included graduate students.

B) It was not the case that banks with fewer signs of browsing had taller willow seedlings.

C) She did not measure bird nests in the willows.

D) Banks with fewer signs of browsing had taller willow seedlings.

390. *Medium — quotation that supports the claim*
Dr. Sara Lind has studied a reading-speed test of two typefaces. Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same.

Which quotation from the text most directly supports the claim in the first sentence?

A) In the study, adults read the same passage in each typeface while being timed.

B) Dr. Sara Lind has studied a reading-speed test of two typefaces.

C) The results showed that it was not the case that average times for the two typefaces were nearly the same.

D) The results showed that average times for the two typefaces were nearly the same.

391. *Hard — new finding that weakens a claim*
Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned.

Which finding, if true, would most directly weaken the claim?

A) It was not the case that banks with fewer signs of browsing had taller willow seedlings.

B) The research team included graduate students.

C) The study was conducted in the area of willows in a valley where wolves had returned.

D) Banks with fewer signs of browsing had taller willow seedlings.

392. *Medium — new finding that supports a claim*
Dr. Hannah Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores.

Which finding, if true, would most directly support the claim?

A) It was not the case that students with more reported hours had higher scores on average.

B) Students with more reported hours had higher scores on average.

C) The research team included graduate students.

D) The study did not observe whether the reported hours were accurate.

393. *Medium — quotation that supports the claim*
Dr. Brian Holt has studied helmet use and head injuries in a city bike-share program. Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet.

Which quotation from the text most directly supports the claim in the first sentence?

A) Dr. Brian Holt has studied helmet use and head injuries in a city bike-share program.

B) The results showed that it was not the case that helmeted riders reported fewer head injuries than riders who reported no helmet.

C) In the study, he surveyed riders after trips over one summer.

D) The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet.

394. *Hard — new finding that weakens a claim*
Dr. Hannah Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores.

Which finding, if true, would most directly weaken the claim?

A) Students with more reported hours had higher scores on average.

B) It was not the case that students with more reported hours had higher scores on average.

C) The research team included graduate students.

D) The study was conducted in the area of homework hours and quiz scores in one course.

395. *Medium — new finding that supports a claim*
Dr. Leo Martins claims that the wetland held floodwater that would otherwise have reached the road.

Which finding, if true, would most directly support the claim?

A) It was not the case that the wetland depth rose while the road remained dry.

B) The wetland depth rose while the road remained dry.

C) The research team included graduate students.

D) The gauges were not left in place over the winter.

396. *Medium — quotation that supports the claim*
Dr. Ellen Zhou has studied dust layers in an ice core. Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that the thickest dust layers fell in years the notes call dry.

B) The results showed that the thickest dust layers fell in years the notes call dry.

C) Dr. Ellen Zhou has studied dust layers in an ice core.

D) In the study, she matched dated layers in the ice with the valley's harvest notes.

397. *Hard — new finding that weakens a claim*
Dr. Leo Martins claims that the wetland held floodwater that would otherwise have reached the road.

Which finding, if true, would most directly weaken the claim?

A) The research team included graduate students.

B) It was not the case that the wetland depth rose while the road remained dry.

C) The wetland depth rose while the road remained dry.

D) The study was conducted in the area of a restored wetland beside a river.

398. *Medium — new finding that supports a claim*
Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does.

Which finding, if true, would most directly support the claim?

A) He found no letters from the mill owner about the schedule.

B) The letters name start and end times that add up to more hours than the notice lists.

C) It was not the case that the letters name start and end times that add up to more hours than the notice lists.

D) The research team included graduate students.

399. *Medium — quotation that supports the claim*
Dr. Nadia Korol has studied desert varnish on sunlit rocks. Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

Which quotation from the text most directly supports the claim in the first sentence?

A) In the study, she measured varnish and drying time on rocks in one canyon.

B) Dr. Nadia Korol has studied desert varnish on sunlit rocks.

C) The results showed that it was not the case that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

D) The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

400. *Hard — new finding that weakens a claim*
Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of a mill town in the 1840s.

B) It was not the case that the letters name start and end times that add up to more hours than the notice lists.

C) The letters name start and end times that add up to more hours than the notice lists.

D) The research team included graduate students.

401. *Medium — new finding that supports a claim*
Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same.

Which finding, if true, would most directly support the claim?

A) She did not test whether scientists themselves prefer one voice.

B) It was not the case that readers rated the passive versions as more certain.

C) The research team included graduate students.

D) Readers rated the passive versions as more certain.

402. *Medium — quotation that supports the claim*
Dr. Sylvia Markham has studied recipes in an eighteenth-century household book. Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. In the study, she sorted the dated recipes by the season written beside them. The results showed that winter recipes list dried fruit more often and fresh herbs less often.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that winter recipes list dried fruit more often and fresh herbs less often.

B) Dr. Sylvia Markham has studied recipes in an eighteenth-century household book.

C) The results showed that it was not the case that winter recipes list dried fruit more often and fresh herbs less often.

D) In the study, she sorted the dated recipes by the season written beside them.

403. *Hard — new finding that weakens a claim*
Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of passive voice in lab reports.

B) The research team included graduate students.

C) It was not the case that readers rated the passive versions as more certain.

D) Readers rated the passive versions as more certain.

404. *Medium — new finding that supports a claim*
Dr. Miguel Santos claims that bridge decks grew longer on hot afternoons than on cool mornings.

Which finding, if true, would most directly support the claim?

A) The gaps at the joints were narrower in the afternoon than at dawn.

B) The crews did not measure traffic weight.

C) It was not the case that the gaps at the joints were narrower in the afternoon than at dawn.

D) The research team included graduate students.

405. *Medium — quotation that supports the claim*
Dr. Angela Brooks has studied audience copies of a poem and library loans of the same book. Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before.

Which quotation from the text most directly supports the claim in the first sentence?

A) Dr. Angela Brooks has studied audience copies of a poem and library loans of the same book.

B) The results showed that the loan count was higher in the month after the reading than in the month before.

C) The results showed that it was not the case that the loan count was higher in the month after the reading than in the month before.

D) In the study, she compared monthly loan counts with the date of the reading.

406. *Hard — new finding that weakens a claim*
Dr. Miguel Santos claims that bridge decks grew longer on hot afternoons than on cool mornings.

Which finding, if true, would most directly weaken the claim?

A) The gaps at the joints were narrower in the afternoon than at dawn.

B) The research team included graduate students.

C) The study was conducted in the area of steel bridges in hot weather.

D) It was not the case that the gaps at the joints were narrower in the afternoon than at dawn.

407. *Medium — new finding that supports a claim*
Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement.

Which finding, if true, would most directly support the claim?

A) It was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.

B) The research team included graduate students.

C) She did not interview anyone who watched the murals being painted.

D) The sketches show occupations named in the contracts, such as harvesting and mill work.

408. *Medium — quotation that supports the claim*
Dr. William Drake has studied ship manifests and a passenger diary from 1850. Drake claims that the diary names more children in one family than the manifest lists for that surname. In the study, he lined up the surname in both documents. The results showed that the diary lists three children and the manifest lists two.

Which quotation from the text most directly supports the claim in the first sentence?

A) Dr. William Drake has studied ship manifests and a passenger diary from 1850.

B) The results showed that it was not the case that the diary lists three children and the manifest lists two.

C) In the study, he lined up the surname in both documents.

D) The results showed that the diary lists three children and the manifest lists two.

409. *Hard — new finding that weakens a claim*
Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of murals painted for public buildings in the 1930s.

B) It was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.

C) The research team included graduate students.

D) The sketches show occupations named in the contracts, such as harvesting and mill work.

410. *Medium — new finding that supports a claim*
Dr. Tanya Brooks claims that no-till fields lost less soil in heavy rain than plowed fields beside them.

Which finding, if true, would most directly support the claim?

A) She did not measure the crop yield.

B) It was not the case that less soil was caught below the no-till fields.

C) Less soil was caught below the no-till fields.

D) The research team included graduate students.

411. *Medium — quotation that supports the claim*
Dr. Felix Nguyen has studied mussels on a rocky shore. Nguyen claims that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day. In the study, he measured mussels at marked heights on the same rock. The results showed that mussels lower down, in the wetter band, were larger.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that it was not the case that mussels lower down, in the wetter band, were larger.

B) Dr. Felix Nguyen has studied mussels on a rocky shore.

C) The results showed that mussels lower down, in the wetter band, were larger.

D) In the study, he measured mussels at marked heights on the same rock.

412. *Hard — new finding that weakens a claim*
Dr. Tanya Brooks claims that no-till fields lost less soil in heavy rain than plowed fields beside them.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of fields farmed without plowing.

B) It was not the case that less soil was caught below the no-till fields.

C) Less soil was caught below the no-till fields.

D) The research team included graduate students.

413. *Medium — new finding that supports a claim*
Dr. Karen Ito claims that more overdue books came back in the months after fines ended than in the months before.

Which finding, if true, would most directly support the claim?

A) Returns of overdue books rose after fines ended.

B) Other changes, including longer open hours, happened in the same months.

C) It was not the case that returns of overdue books rose after fines ended.

D) The research team included graduate students.

414. *Medium — quotation that supports the claim*
Dr. Hassan Ali has studied a windbreak of shrubs beside crop rows. Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. In the study, he collected soil at several distances after one storm. The results showed that the rows nearest the shrubs lost less soil than the open rows.

Which quotation from the text most directly supports the claim in the first sentence?

A) The results showed that the rows nearest the shrubs lost less soil than the open rows.

B) The results showed that it was not the case that the rows nearest the shrubs lost less soil than the open rows.

C) In the study, he collected soil at several distances after one storm.

D) Dr. Hassan Ali has studied a windbreak of shrubs beside crop rows.

415. *Hard — new finding that weakens a claim*
Dr. Karen Ito claims that more overdue books came back in the months after fines ended than in the months before.

Which finding, if true, would most directly weaken the claim?

A) The study was conducted in the area of a city that stopped charging library overdue fines.

B) Returns of overdue books rose after fines ended.

C) It was not the case that returns of overdue books rose after fines ended.

D) The research team included graduate students.

Information and Ideas: Command of Evidence (Quantitative)

416. *Easy — data that support a claim*
A student claims that students who slept more would have higher mean quiz scores.

Mean quiz score by hours of sleep the night before

hours of sleep the night before	Mean quiz score
6 hours	15
7 hours	18
8 hours	21
9 hours	24

Which choice most effectively uses data from the table to support the student's claim?

A) 6 hours shows a higher value (15 points) than 9 hours (24 points).

B) 7 hours and 8 hours show the same value.

C) 9 hours shows a higher value (24 points) than 6 hours (15 points).

D) 9 hours shows a value of 15 points.

417. *Medium — true comparison from a table*
The table shows mean quiz score by hours of sleep the night before.

Mean quiz score by hours of sleep the night before

hours of sleep the night before	Mean quiz score
6 hours	15
7 hours	18
8 hours	21
9 hours	24

Which choice most accurately uses data from the table?

A) 6 hours and 8 hours show the same value.

B) 7 hours shows a higher value (18 points) than 9 hours (24 points).

C) 9 hours shows a higher value (24 points) than 7 hours (18 points).

D) 9 hours shows a value of 15 points.

418. *Hard — data that challenge a claim*
A student claims that the mean quiz score rose at every step from 6 hours to 9 hours.

Mean quiz score by hours of sleep the night before

hours of sleep the night before	Mean quiz score
6 hours	15
7 hours	18
8 hours	12
9 hours	24

Which choice most effectively uses data from the table to challenge the student's claim?

A) 9 hours is higher (24 points) than 6 hours (15 points).

B) 9 hours is lower (24 points) than 6 hours (15 points).

C) 8 hours is lower (12 points) than 7 hours (18 points).

D) 7 hours is lower (18 points) than 6 hours (15 points).

419. *Easy — data that support a claim*
A student claims that longer distances would come with longer mean commutes.

Mean commute by distance from campus

distance from campus	Mean commute
under 1 mile	16
1 to 3 miles	20
3 to 6 miles	24
over 6 miles	28

Which choice most effectively uses data from the table to support the student's claim?

A) under 1 mile shows a higher value (16 minutes) than over 6 miles (28 minutes).

B) 1 to 3 miles and 3 to 6 miles show the same value.

C) over 6 miles shows a higher value (28 minutes) than under 1 mile (16 minutes).

D) over 6 miles shows a value of 16 minutes.

420. *Medium — true comparison from a table*
The table shows mean commute by distance from campus.

Mean commute by distance from campus

distance from campus	Mean commute
under 1 mile	16
1 to 3 miles	20
3 to 6 miles	24
over 6 miles	28

Which choice most accurately uses data from the table?

A) under 1 mile and 3 to 6 miles show the same value.

B) 1 to 3 miles shows a higher value (20 minutes) than over 6 miles (28 minutes).

C) over 6 miles shows a value of 16 minutes.

D) over 6 miles shows a higher value (28 minutes) than 1 to 3 miles (20 minutes).

421. *Hard — data that challenge a claim*
A student claims that the mean quiz score rose at every step from 6 hours to 9 hours.

Mean quiz score by hours of sleep the night before

hours of sleep the night before	Mean quiz score
6 hours	21
7 hours	24
8 hours	19
9 hours	30

Which choice most effectively uses data from the table to challenge the student's claim?

A) 9 hours is higher (30 points) than 6 hours (21 points).

B) 8 hours is lower (19 points) than 7 hours (24 points).

C) 7 hours is lower (24 points) than 6 hours (21 points).

D) 9 hours is lower (30 points) than 6 hours (21 points).

422. *Easy — data that support a claim*
A student claims that a warmer daytime temperature would come with a higher percent sprouted.

Seedlings sprouted by daytime temperature

daytime temperature	Seedlings sprouted
15 C	17
20 C	22
25 C	27
30 C	32

Which choice most effectively uses data from the table to support the student's claim?

A) 20 C and 25 C show the same value.

B) 15 C shows a higher value (17 percent) than 30 C (32 percent).

C) 30 C shows a higher value (32 percent) than 15 C (17 percent).

D) 30 C shows a value of 17 percent.

423. *Medium — true comparison from a table*
The table shows seedlings sprouted by daytime temperature.

Seedlings sprouted by daytime temperature

daytime temperature	Seedlings sprouted
15 C	17
20 C	22
25 C	27
30 C	32

Which choice most accurately uses data from the table?

A) 15 C and 25 C show the same value.

B) 30 C shows a value of 17 percent.

C) 20 C shows a higher value (22 percent) than 30 C (32 percent).

D) 30 C shows a higher value (32 percent) than 20 C (22 percent).

424. *Hard — data that challenge a claim*
A student claims that the mean quiz score rose at every step from 6 hours to 9 hours.

Mean quiz score by hours of sleep the night before

hours of sleep the night before	Mean quiz score
6 hours	12
7 hours	17
8 hours	13
9 hours	27

Which choice most effectively uses data from the table to challenge the student's claim?

A) 9 hours is higher (27 points) than 6 hours (12 points).

B) 7 hours is lower (17 points) than 6 hours (12 points).

C) 9 hours is lower (27 points) than 6 hours (12 points).

D) 8 hours is lower (13 points) than 7 hours (17 points).

425. *Easy — data that support a claim*
A student claims that returns would rise across the four weeks.

Books returned by week after fines ended

week after fines ended	Books returned
week 1	15
week 2	18
week 3	21
week 4	24

Which choice most effectively uses data from the table to support the student's claim?

A) week 1 shows a higher value (15 number) than week 4 (24 number).

B) week 2 and week 3 show the same value.

C) week 4 shows a higher value (24 number) than week 1 (15 number).

D) week 4 shows a value of 15 number.

426. *Medium — true comparison from a table*
The table shows books returned by week after fines ended.

Books returned by week after fines ended

week after fines ended	Books returned
week 1	15
week 2	18
week 3	21
week 4	24

Which choice most accurately uses data from the table?

A) week 4 shows a value of 15 number.

B) week 2 shows a higher value (18 number) than week 4 (24 number).

C) week 1 and week 3 show the same value.

D) week 4 shows a higher value (24 number) than week 2 (18 number).

427. *Hard — data that challenge a claim*
A student claims that the mean commute rose at every step from under 1 mile to over 6 miles.

Mean commute by distance from campus

distance from campus	Mean commute
under 1 mile	16
1 to 3 miles	20
3 to 6 miles	16
over 6 miles	28

Which choice most effectively uses data from the table to challenge the student's claim?

A) 3 to 6 miles is lower (16 minutes) than 1 to 3 miles (20 minutes).

B) over 6 miles is lower (28 minutes) than under 1 mile (16 minutes).

C) 1 to 3 miles is lower (20 minutes) than under 1 mile (16 minutes).

D) over 6 miles is higher (28 minutes) than under 1 mile (16 minutes).

428. *Easy — data that support a claim*
A student claims that hotter afternoons would come with narrower joint gaps.

Bridge gap by afternoon temperature

afternoon temperature	Bridge gap
10 C	48
20 C	44
30 C	40
35 C	36

Which choice most effectively uses data from the table to support the student's claim?

A) 35 C shows a lower value (36 millimeters) than 10 C (48 millimeters).

B) 20 C and 30 C show the same value.

C) 10 C shows a lower value (48 millimeters) than 35 C (36 millimeters).

D) 35 C shows a value of 48 millimeters.

429. *Medium — true comparison from a table*
The table shows bridge gap by afternoon temperature.

Bridge gap by afternoon temperature

afternoon temperature	Bridge gap
10 C	48
20 C	44
30 C	40
35 C	36

Which choice most accurately uses data from the table?

A) 35 C shows a higher value (36 millimeters) than 20 C (44 millimeters).

B) 20 C shows a higher value (44 millimeters) than 35 C (36 millimeters).

C) 35 C shows a value of 48 millimeters.

D) 10 C and 30 C show the same value.

430. *Hard — data that challenge a claim*
A student claims that the mean commute rose at every step from under 1 mile to over 6 miles.

Mean commute by distance from campus

distance from campus	Mean commute
under 1 mile	22
1 to 3 miles	26
3 to 6 miles	20
over 6 miles	34

Which choice most effectively uses data from the table to challenge the student's claim?

A) over 6 miles is lower (34 minutes) than under 1 mile (22 minutes).

B) 3 to 6 miles is lower (20 minutes) than 1 to 3 miles (26 minutes).

C) 1 to 3 miles is lower (26 minutes) than under 1 mile (22 minutes).

D) over 6 miles is higher (34 minutes) than under 1 mile (22 minutes).

431. *Easy — data that support a claim*
A student claims that warmer mornings would come with more miles of range.

Battery range by morning temperature

morning temperature	Battery range
-5 C	17
5 C	22
15 C	27
25 C	32

Which choice most effectively uses data from the table to support the student's claim?

A) 5 C and 15 C show the same value.

B) -5 C shows a higher value (17 miles) than 25 C (32 miles).

C) 25 C shows a higher value (32 miles) than -5 C (17 miles).

D) 25 C shows a value of 17 miles.

432. *Medium — true comparison from a table*
The table shows battery range by morning temperature.

Battery range by morning temperature

morning temperature	Battery range
-5 C	17
5 C	22
15 C	27
25 C	32

Which choice most accurately uses data from the table?

A) 5 C shows a higher value (22 miles) than 25 C (32 miles).

B) 25 C shows a higher value (32 miles) than 5 C (22 miles).

C) 25 C shows a value of 17 miles.

D) -5 C and 15 C show the same value.

433. *Hard — data that challenge a claim*
A student claims that the mean commute rose at every step from under 1 mile to over 6 miles.

Mean commute by distance from campus

distance from campus	Mean commute
under 1 mile	10
1 to 3 miles	13
3 to 6 miles	8
over 6 miles	19

Which choice most effectively uses data from the table to challenge the student's claim?

A) 3 to 6 miles is lower (8 minutes) than 1 to 3 miles (13 minutes).

B) over 6 miles is lower (19 minutes) than under 1 mile (10 minutes).

C) over 6 miles is higher (19 minutes) than under 1 mile (10 minutes).

D) 1 to 3 miles is lower (13 minutes) than under 1 mile (10 minutes).

434. *Easy — data that support a claim*
A student claims that more canopy would come with less soil caught below the field.

Soil caught by canopy cover

canopy cover	Soil caught
10 percent	49
25 percent	46
40 percent	43
60 percent	40

Which choice most effectively uses data from the table to support the student's claim?

A) 10 percent shows a lower value (49 grams) than 60 percent (40 grams).

B) 25 percent and 40 percent show the same value.

C) 60 percent shows a lower value (40 grams) than 10 percent (49 grams).

D) 60 percent shows a value of 49 grams.

435. *Medium — true comparison from a table*
The table shows soil caught by canopy cover.

Soil caught by canopy cover

canopy cover	Soil caught
10 percent	49
25 percent	46
40 percent	43
60 percent	40

Which choice most accurately uses data from the table?

A) 60 percent shows a higher value (40 grams) than 25 percent (46 grams).

B) 10 percent and 40 percent show the same value.

C) 60 percent shows a value of 49 grams.

D) 25 percent shows a higher value (46 grams) than 60 percent (40 grams).

436. *Hard — data that challenge a claim*
A student claims that the seedlings sprouted rose at every step from 15 C to 30 C.

Seedlings sprouted by daytime temperature

daytime temperature	Seedlings sprouted
15 C	17
20 C	22
25 C	17
30 C	32

Which choice most effectively uses data from the table to challenge the student's claim?

A) 30 C is lower (32 percent) than 15 C (17 percent).

B) 30 C is higher (32 percent) than 15 C (17 percent).

C) 20 C is lower (22 percent) than 15 C (17 percent).

D) 25 C is lower (17 percent) than 20 C (22 percent).

437. *Easy — data that support a claim*
A student claims that recall would be lower after more time had passed.

Words recalled by hours after reading

hours after reading	Words recalled
1 hour	48
4 hours	44
1 day	40
1 week	36

Which choice most effectively uses data from the table to support the student's claim?

A) 1 week shows a value of 48 number.

B) 1 hour shows a lower value (48 number) than 1 week (36 number).

C) 1 week shows a lower value (36 number) than 1 hour (48 number).

D) 4 hours and 1 day show the same value.

438. *Medium — true comparison from a table*
The table shows words recalled by hours after reading.

Words recalled by hours after reading

hours after reading	Words recalled
1 hour	48
4 hours	44
1 day	40
1 week	36

Which choice most accurately uses data from the table?

A) 4 hours shows a higher value (44 number) than 1 week (36 number).

B) 1 hour and 1 day show the same value.

C) 1 week shows a higher value (36 number) than 4 hours (44 number).

D) 1 week shows a value of 48 number.

439. *Hard — data that challenge a claim*
A student claims that the seedlings sprouted rose at every step from 15 C to 30 C.

Seedlings sprouted by daytime temperature

daytime temperature	Seedlings sprouted
15 C	23
20 C	28
25 C	24
30 C	38

Which choice most effectively uses data from the table to challenge the student's claim?

A) 20 C is lower (28 percent) than 15 C (23 percent).

B) 30 C is lower (38 percent) than 15 C (23 percent).

C) 30 C is higher (38 percent) than 15 C (23 percent).

D) 25 C is lower (24 percent) than 20 C (28 percent).

440. *Easy — data that support a claim*
A student claims that higher boxes would be occupied less often.

Nest boxes occupied by height of the box

height of the box	Nest boxes occupied
1 meter	47
2 meters	42
3 meters	37
4 meters	32

Which choice most effectively uses data from the table to support the student's claim?

A) 2 meters and 3 meters show the same value.

B) 4 meters shows a value of 47 percent.

C) 4 meters shows a lower value (32 percent) than 1 meter (47 percent).

D) 1 meter shows a lower value (47 percent) than 4 meters (32 percent).

441. *Medium — true comparison from a table*
The table shows nest boxes occupied by height of the box.

Nest boxes occupied by height of the box

height of the box	Nest boxes occupied
1 meter	47
2 meters	42
3 meters	37
4 meters	32

Which choice most accurately uses data from the table?

A) 2 meters shows a higher value (42 percent) than 4 meters (32 percent).

B) 1 meter and 3 meters show the same value.

C) 4 meters shows a value of 47 percent.

D) 4 meters shows a higher value (32 percent) than 2 meters (42 percent).

442. *Hard — data that challenge a claim*
A student claims that the seedlings sprouted rose at every step from 15 C to 30 C.

Seedlings sprouted by daytime temperature

daytime temperature	Seedlings sprouted
15 C	11
20 C	15
25 C	9
30 C	23

Which choice most effectively uses data from the table to challenge the student's claim?

A) 25 C is lower (9 percent) than 20 C (15 percent).

B) 30 C is higher (23 percent) than 15 C (11 percent).

C) 20 C is lower (15 percent) than 15 C (11 percent).

D) 30 C is lower (23 percent) than 15 C (11 percent).

443. *Easy — data that support a claim*
A student claims that trip times would fall across the four months.

Bus trip time by month after the lane opened

month after the lane opened	Bus trip time
month 1	49
month 2	46
month 3	43
month 4	40

Which choice most effectively uses data from the table to support the student's claim?

A) month 1 shows a lower value (49 minutes) than month 4 (40 minutes).

B) month 2 and month 3 show the same value.

C) month 4 shows a value of 49 minutes.

D) month 4 shows a lower value (40 minutes) than month 1 (49 minutes).

444. *Medium — true comparison from a table*
The table shows bus trip time by month after the lane opened.

Bus trip time by month after the lane opened

month after the lane opened	Bus trip time
month 1	49
month 2	46
month 3	43
month 4	40

Which choice most accurately uses data from the table?

A) month 2 shows a higher value (46 minutes) than month 4 (40 minutes).

B) month 1 and month 3 show the same value.

C) month 4 shows a value of 49 minutes.

D) month 4 shows a higher value (40 minutes) than month 2 (46 minutes).

445. *Hard — data that challenge a claim*
A student claims that the books returned rose at every step from week 1 to week 4.

Books returned by week after fines ended

week after fines ended	Books returned
week 1	15
week 2	18
week 3	12
week 4	24

Which choice most effectively uses data from the table to challenge the student's claim?

A) week 4 is lower (24 number) than week 1 (15 number).

B) week 3 is lower (12 number) than week 2 (18 number).

C) week 4 is higher (24 number) than week 1 (15 number).

D) week 2 is lower (18 number) than week 1 (15 number).

446. *Easy — data that support a claim*
A student claims that algae cover would fall across the four weeks.

Algae cover by weeks since the heat wave

weeks since the heat wave	Algae cover
week 1	48
week 2	44
week 3	40
week 4	36

Which choice most effectively uses data from the table to support the student's claim?

A) week 4 shows a value of 48 percent.

B) week 2 and week 3 show the same value.

C) week 1 shows a lower value (48 percent) than week 4 (36 percent).

D) week 4 shows a lower value (36 percent) than week 1 (48 percent).

447. *Medium — true comparison from a table*
The table shows algae cover by weeks since the heat wave.

Algae cover by weeks since the heat wave

weeks since the heat wave	Algae cover
week 1	48
week 2	44
week 3	40
week 4	36

Which choice most accurately uses data from the table?

A) week 4 shows a value of 48 percent.

B) week 2 shows a higher value (44 percent) than week 4 (36 percent).

C) week 1 and week 3 show the same value.

D) week 4 shows a higher value (36 percent) than week 2 (44 percent).

448. *Hard — data that challenge a claim*
A student claims that the books returned rose at every step from week 1 to week 4.

Books returned by week after fines ended

week after fines ended	Books returned
week 1	21
week 2	24
week 3	19
week 4	30

Which choice most effectively uses data from the table to challenge the student's claim?

A) week 4 is lower (30 number) than week 1 (21 number).

B) week 4 is higher (30 number) than week 1 (21 number).

C) week 3 is lower (19 number) than week 2 (24 number).

D) week 2 is lower (24 number) than week 1 (21 number).

449. *Easy — data that support a claim*
A student claims that a later start would come with higher attendance.

Attendance by start time

start time	Attendance
7:15	17
7:45	22
8:15	27
8:45	32

Which choice most effectively uses data from the table to support the student's claim?

A) 8:45 shows a higher value (32 percent) than 7:15 (17 percent).

B) 7:45 and 8:15 show the same value.

C) 8:45 shows a value of 17 percent.

D) 7:15 shows a higher value (17 percent) than 8:45 (32 percent).

450. *Medium — true comparison from a table*
The table shows attendance by start time.

Attendance by start time

start time	Attendance
7:15	17
7:45	22
8:15	27
8:45	32

Which choice most accurately uses data from the table?

A) 7:45 shows a higher value (22 percent) than 8:45 (32 percent).

B) 8:45 shows a value of 17 percent.

C) 7:15 and 8:15 show the same value.

D) 8:45 shows a higher value (32 percent) than 7:45 (22 percent).

451. *Hard — data that challenge a claim*
A student claims that the books returned rose at every step from week 1 to week 4.

Books returned by week after fines ended

week after fines ended	Books returned
week 1	12
week 2	17
week 3	13
week 4	27

Which choice most effectively uses data from the table to challenge the student's claim?

A) week 3 is lower (13 number) than week 2 (17 number).

B) week 4 is higher (27 number) than week 1 (12 number).

C) week 4 is lower (27 number) than week 1 (12 number).

D) week 2 is lower (17 number) than week 1 (12 number).

452. *Easy — data that support a claim*
A student claims that more shell temper would come with a lower percent of cracked pots.

Cracked pots by shell temper added

shell temper added	Cracked pots
none	49
5 percent	46
10 percent	43
15 percent	40

Which choice most effectively uses data from the table to support the student's claim?

A) none shows a lower value (49 percent) than 15 percent (40 percent).

B) 5 percent and 10 percent show the same value.

C) 15 percent shows a value of 49 percent.

D) 15 percent shows a lower value (40 percent) than none (49 percent).

453. *Medium — true comparison from a table*
The table shows cracked pots by shell temper added.

Cracked pots by shell temper added

shell temper added	Cracked pots
none	49
5 percent	46
10 percent	43
15 percent	40

Which choice most accurately uses data from the table?

A) none and 10 percent show the same value.

B) 5 percent shows a higher value (46 percent) than 15 percent (40 percent).

C) 15 percent shows a value of 49 percent.

D) 15 percent shows a higher value (40 percent) than 5 percent (46 percent).

454. *Hard — data that challenge a claim*
A student claims that the bridge gap fell at every step from 10 C to 35 C.

Bridge gap by afternoon temperature

afternoon temperature	Bridge gap
10 C	48
20 C	44
30 C	48
35 C	36

Which choice most effectively uses data from the table to challenge the student's claim?

A) 20 C is higher (44 millimeters) than 10 C (48 millimeters).

B) 35 C is lower (36 millimeters) than 10 C (48 millimeters).

C) 35 C is higher (36 millimeters) than 10 C (48 millimeters).

D) 30 C is higher (48 millimeters) than 20 C (44 millimeters).

455. *Easy — data that support a claim*
A student claims that older letters would show more tears along the ink.

Page tears by age of the iron-gall letters

age of the iron-gall letters	Page tears
20 years	16
50 years	20
80 years	24
120 years	28

Which choice most effectively uses data from the table to support the student's claim?

A) 50 years and 80 years show the same value.

B) 20 years shows a higher value (16 number) than 120 years (28 number).

C) 120 years shows a higher value (28 number) than 20 years (16 number).

D) 120 years shows a value of 16 number.

456. *Medium — true comparison from a table*
The table shows page tears by age of the iron-gall letters.

Page tears by age of the iron-gall letters

age of the iron-gall letters	Page tears
20 years	16
50 years	20
80 years	24
120 years	28

Which choice most accurately uses data from the table?

A) 120 years shows a value of 16 number.

B) 20 years and 80 years show the same value.

C) 50 years shows a higher value (20 number) than 120 years (28 number).

D) 120 years shows a higher value (28 number) than 50 years (20 number).

457. *Hard — data that challenge a claim*
A student claims that the bridge gap fell at every step from 10 C to 35 C.

Bridge gap by afternoon temperature

afternoon temperature	Bridge gap
10 C	54
20 C	50
30 C	56
35 C	42

Which choice most effectively uses data from the table to challenge the student's claim?

A) 35 C is higher (42 millimeters) than 10 C (54 millimeters).

B) 20 C is higher (50 millimeters) than 10 C (54 millimeters).

C) 35 C is lower (42 millimeters) than 10 C (54 millimeters).

D) 30 C is higher (56 millimeters) than 20 C (50 millimeters).

458. *Easy — data that support a claim*
A student claims that longer captions would come with more minutes spent at the case.

Visitor time by caption length

caption length	Visitor time
10 words	17
25 words	22
50 words	27
80 words	32

Which choice most effectively uses data from the table to support the student's claim?

A) 10 words shows a higher value (17 minutes) than 80 words (32 minutes).

B) 25 words and 50 words show the same value.

C) 80 words shows a higher value (32 minutes) than 10 words (17 minutes).

D) 80 words shows a value of 17 minutes.

459. *Medium — true comparison from a table*
The table shows visitor time by caption length.

Visitor time by caption length

caption length	Visitor time
10 words	17
25 words	22
50 words	27
80 words	32

Which choice most accurately uses data from the table?

A) 25 words shows a higher value (22 minutes) than 80 words (32 minutes).

B) 80 words shows a value of 17 minutes.

C) 10 words and 50 words show the same value.

D) 80 words shows a higher value (32 minutes) than 25 words (22 minutes).

460. *Hard — data that challenge a claim*
A student claims that the bridge gap fell at every step from 10 C to 35 C.

Bridge gap by afternoon temperature

afternoon temperature	Bridge gap
10 C	44
20 C	41
30 C	46
35 C	35

Which choice most effectively uses data from the table to challenge the student's claim?

A) 35 C is lower (35 millimeters) than 10 C (44 millimeters).

B) 35 C is higher (35 millimeters) than 10 C (44 millimeters).

C) 30 C is higher (46 millimeters) than 20 C (41 millimeters).

D) 20 C is higher (41 millimeters) than 10 C (44 millimeters).

461. *Medium — data that support a claim*
A student claims that students who slept more would have higher mean quiz scores.

Mean quiz score by hours of sleep the night before

hours of sleep the night before	Mean quiz score
6 hours	21
7 hours	24
8 hours	27
9 hours	30

Which choice most effectively uses data from the table to support the student's claim?

A) 9 hours shows a value of 21 points.

B) 7 hours and 8 hours show the same value.

C) 9 hours shows a higher value (30 points) than 6 hours (21 points).

D) 6 hours shows a higher value (21 points) than 9 hours (30 points).

462. *Hard — data that challenge a claim*
A student claims that the battery range rose at every step from -5 C to 25 C.

Battery range by morning temperature

morning temperature	Battery range
-5 C	17
5 C	22
15 C	17
25 C	32

Which choice most effectively uses data from the table to challenge the student's claim?

A) 25 C is higher (32 miles) than -5 C (17 miles).

B) 5 C is lower (22 miles) than -5 C (17 miles).

C) 25 C is lower (32 miles) than -5 C (17 miles).

D) 15 C is lower (17 miles) than 5 C (22 miles).

463. *Medium — data that support a claim*
A student claims that students who slept more would have higher mean quiz scores.

Mean quiz score by hours of sleep the night before

hours of sleep the night before	Mean quiz score
6 hours	12
7 hours	17
8 hours	22
9 hours	27

Which choice most effectively uses data from the table to support the student's claim?

A) 6 hours shows a higher value (12 points) than 9 hours (27 points).

B) 9 hours shows a value of 12 points.

C) 9 hours shows a higher value (27 points) than 6 hours (12 points).

D) 7 hours and 8 hours show the same value.

464. *Hard — data that challenge a claim*
A student claims that the battery range rose at every step from -5 C to 25 C.

Battery range by morning temperature

morning temperature	Battery range
-5 C	23
5 C	28
15 C	24
25 C	38

Which choice most effectively uses data from the table to challenge the student's claim?

A) 15 C is lower (24 miles) than 5 C (28 miles).

B) 25 C is higher (38 miles) than -5 C (23 miles).

C) 5 C is lower (28 miles) than -5 C (23 miles).

D) 25 C is lower (38 miles) than -5 C (23 miles).

465. *Medium — data that support a claim*
A student claims that longer distances would come with longer mean commutes.

Mean commute by distance from campus

distance from campus	Mean commute
under 1 mile	22
1 to 3 miles	26
3 to 6 miles	30
over 6 miles	34

Which choice most effectively uses data from the table to support the student's claim?

A) under 1 mile shows a higher value (22 minutes) than over 6 miles (34 minutes).

B) 1 to 3 miles and 3 to 6 miles show the same value.

C) over 6 miles shows a higher value (34 minutes) than under 1 mile (22 minutes).

D) over 6 miles shows a value of 22 minutes.

466. *Hard — data that challenge a claim*
A student claims that the battery range rose at every step from -5 C to 25 C.

Battery range by morning temperature

morning temperature	Battery range
-5 C	11
5 C	15
15 C	9
25 C	23

Which choice most effectively uses data from the table to challenge the student's claim?

A) 15 C is lower (9 miles) than 5 C (15 miles).

B) 5 C is lower (15 miles) than -5 C (11 miles).

C) 25 C is lower (23 miles) than -5 C (11 miles).

D) 25 C is higher (23 miles) than -5 C (11 miles).

467. *Medium — data that support a claim*
A student claims that longer distances would come with longer mean commutes.

Mean commute by distance from campus

distance from campus	Mean commute
under 1 mile	10
1 to 3 miles	13
3 to 6 miles	16
over 6 miles	19

Which choice most effectively uses data from the table to support the student's claim?

A) under 1 mile shows a higher value (10 minutes) than over 6 miles (19 minutes).

B) over 6 miles shows a higher value (19 minutes) than under 1 mile (10 minutes).

C) 1 to 3 miles and 3 to 6 miles show the same value.

D) over 6 miles shows a value of 10 minutes.

468. *Hard — data that challenge a claim*
A student claims that the soil caught fell at every step from 10 percent to 60 percent.

Soil caught by canopy cover

canopy cover	Soil caught
10 percent	49
25 percent	46
40 percent	52
60 percent	40

Which choice most effectively uses data from the table to challenge the student's claim?

A) 25 percent is higher (46 grams) than 10 percent (49 grams).

B) 60 percent is higher (40 grams) than 10 percent (49 grams).

C) 40 percent is higher (52 grams) than 25 percent (46 grams).

D) 60 percent is lower (40 grams) than 10 percent (49 grams).

469. *Medium — data that support a claim*
A student claims that a warmer daytime temperature would come with a higher percent sprouted.

Seedlings sprouted by daytime temperature

daytime temperature	Seedlings sprouted
15 C	23
20 C	28
25 C	33
30 C	38

Which choice most effectively uses data from the table to support the student's claim?

A) 20 C and 25 C show the same value.

B) 30 C shows a higher value (38 percent) than 15 C (23 percent).

C) 15 C shows a higher value (23 percent) than 30 C (38 percent).

D) 30 C shows a value of 23 percent.

470. *Hard — data that challenge a claim*
A student claims that the soil caught fell at every step from 10 percent to 60 percent.

Soil caught by canopy cover

canopy cover	Soil caught
10 percent	55
25 percent	52
40 percent	57
60 percent	46

Which choice most effectively uses data from the table to challenge the student's claim?

A) 40 percent is higher (57 grams) than 25 percent (52 grams).

B) 60 percent is lower (46 grams) than 10 percent (55 grams).

C) 25 percent is higher (52 grams) than 10 percent (55 grams).

D) 60 percent is higher (46 grams) than 10 percent (55 grams).

471. *Medium — data that support a claim*
A student claims that a warmer daytime temperature would come with a higher percent sprouted.

Seedlings sprouted by daytime temperature

daytime temperature	Seedlings sprouted
15 C	11
20 C	15
25 C	19
30 C	23

Which choice most effectively uses data from the table to support the student's claim?

A) 15 C shows a higher value (11 percent) than 30 C (23 percent).

B) 30 C shows a higher value (23 percent) than 15 C (11 percent).

C) 20 C and 25 C show the same value.

D) 30 C shows a value of 11 percent.

472. *Hard — data that challenge a claim*
A student claims that the soil caught fell at every step from 10 percent to 60 percent.

Soil caught by canopy cover

canopy cover	Soil caught
10 percent	42
25 percent	37
40 percent	41
60 percent	27

Which choice most effectively uses data from the table to challenge the student's claim?

A) 60 percent is lower (27 grams) than 10 percent (42 grams).

B) 60 percent is higher (27 grams) than 10 percent (42 grams).

C) 40 percent is higher (41 grams) than 25 percent (37 grams).

D) 25 percent is higher (37 grams) than 10 percent (42 grams).

473. *Medium — data that support a claim*
A student claims that returns would rise across the four weeks.

Books returned by week after fines ended

week after fines ended	Books returned
week 1	21
week 2	24
week 3	27
week 4	30

Which choice most effectively uses data from the table to support the student's claim?

A) week 4 shows a value of 21 number.

B) week 2 and week 3 show the same value.

C) week 4 shows a higher value (30 number) than week 1 (21 number).

D) week 1 shows a higher value (21 number) than week 4 (30 number).

474. *Hard — data that challenge a claim*
A student claims that the words recalled fell at every step from 1 hour to 1 week.

Words recalled by hours after reading

hours after reading	Words recalled
1 hour	48
4 hours	44
1 day	48
1 week	36

Which choice most effectively uses data from the table to challenge the student's claim?

A) 1 week is lower (36 number) than 1 hour (48 number).

B) 1 week is higher (36 number) than 1 hour (48 number).

C) 1 day is higher (48 number) than 4 hours (44 number).

D) 4 hours is higher (44 number) than 1 hour (48 number).

475. *Medium — data that support a claim*
A student claims that returns would rise across the four weeks.

Books returned by week after fines ended

week after fines ended	Books returned
week 1	12
week 2	17
week 3	22
week 4	27

Which choice most effectively uses data from the table to support the student's claim?

A) week 2 and week 3 show the same value.

B) week 4 shows a higher value (27 number) than week 1 (12 number).

C) week 1 shows a higher value (12 number) than week 4 (27 number).

D) week 4 shows a value of 12 number.

476. *Hard — data that challenge a claim*
A student claims that the words recalled fell at every step from 1 hour to 1 week.

Words recalled by hours after reading

hours after reading	Words recalled
1 hour	54
4 hours	50
1 day	56
1 week	42

Which choice most effectively uses data from the table to challenge the student's claim?

A) 4 hours is higher (50 number) than 1 hour (54 number).

B) 1 week is lower (42 number) than 1 hour (54 number).

C) 1 week is higher (42 number) than 1 hour (54 number).

D) 1 day is higher (56 number) than 4 hours (50 number).

477. *Medium — data that support a claim*
A student claims that hotter afternoons would come with narrower joint gaps.

Bridge gap by afternoon temperature

afternoon temperature	Bridge gap
10 C	54
20 C	50
30 C	46
35 C	42

Which choice most effectively uses data from the table to support the student's claim?

A) 35 C shows a lower value (42 millimeters) than 10 C (54 millimeters).

B) 35 C shows a value of 54 millimeters.

C) 10 C shows a lower value (54 millimeters) than 35 C (42 millimeters).

D) 20 C and 30 C show the same value.

478. *Hard — data that challenge a claim*
A student claims that the words recalled fell at every step from 1 hour to 1 week.

Words recalled by hours after reading

hours after reading	Words recalled
1 hour	44
4 hours	41
1 day	46
1 week	35

Which choice most effectively uses data from the table to challenge the student's claim?

A) 1 day is higher (46 number) than 4 hours (41 number).

B) 1 week is higher (35 number) than 1 hour (44 number).

C) 1 week is lower (35 number) than 1 hour (44 number).

D) 4 hours is higher (41 number) than 1 hour (44 number).

479. *Medium — data that support a claim*
A student claims that hotter afternoons would come with narrower joint gaps.

Bridge gap by afternoon temperature

afternoon temperature	Bridge gap
10 C	44
20 C	41
30 C	38
35 C	35

Which choice most effectively uses data from the table to support the student's claim?

A) 20 C and 30 C show the same value.

B) 35 C shows a value of 44 millimeters.

C) 35 C shows a lower value (35 millimeters) than 10 C (44 millimeters).

D) 10 C shows a lower value (44 millimeters) than 35 C (35 millimeters).

480. *Hard — data that challenge a claim*
A student claims that the nest boxes occupied fell at every step from 1 meter to 4 meters.

Nest boxes occupied by height of the box

height of the box	Nest boxes occupied
1 meter	47
2 meters	42
3 meters	47
4 meters	32

Which choice most effectively uses data from the table to challenge the student's claim?

A) 2 meters is higher (42 percent) than 1 meter (47 percent).

B) 4 meters is higher (32 percent) than 1 meter (47 percent).

C) 4 meters is lower (32 percent) than 1 meter (47 percent).

D) 3 meters is higher (47 percent) than 2 meters (42 percent).

481. *Medium — data that support a claim*
A student claims that warmer mornings would come with more miles of range.

Battery range by morning temperature

morning temperature	Battery range
-5 C	23
5 C	28
15 C	33
25 C	38

Which choice most effectively uses data from the table to support the student's claim?

A) 25 C shows a value of 23 miles.

B) -5 C shows a higher value (23 miles) than 25 C (38 miles).

C) 5 C and 15 C show the same value.

D) 25 C shows a higher value (38 miles) than -5 C (23 miles).

482. *Hard — data that challenge a claim*
A student claims that the nest boxes occupied fell at every step from 1 meter to 4 meters.

Nest boxes occupied by height of the box

height of the box	Nest boxes occupied
1 meter	53
2 meters	48
3 meters	52
4 meters	38

Which choice most effectively uses data from the table to challenge the student's claim?

A) 4 meters is lower (38 percent) than 1 meter (53 percent).

B) 4 meters is higher (38 percent) than 1 meter (53 percent).

C) 2 meters is higher (48 percent) than 1 meter (53 percent).

D) 3 meters is higher (52 percent) than 2 meters (48 percent).

483. *Medium — data that support a claim*
A student claims that warmer mornings would come with more miles of range.

Battery range by morning temperature

morning temperature	Battery range
-5 C	11
5 C	15
15 C	19
25 C	23

Which choice most effectively uses data from the table to support the student's claim?

A) -5 C shows a higher value (11 miles) than 25 C (23 miles).

B) 25 C shows a value of 11 miles.

C) 5 C and 15 C show the same value.

D) 25 C shows a higher value (23 miles) than -5 C (11 miles).

484. *Hard — data that challenge a claim*
A student claims that the nest boxes occupied fell at every step from 1 meter to 4 meters.

Nest boxes occupied by height of the box

height of the box	Nest boxes occupied
1 meter	43
2 meters	39
3 meters	45
4 meters	31

Which choice most effectively uses data from the table to challenge the student's claim?

A) 2 meters is higher (39 percent) than 1 meter (43 percent).

B) 4 meters is lower (31 percent) than 1 meter (43 percent).

C) 3 meters is higher (45 percent) than 2 meters (39 percent).

D) 4 meters is higher (31 percent) than 1 meter (43 percent).

485. *Medium — data that support a claim*
A student claims that more canopy would come with less soil caught below the field.

Soil caught by canopy cover

canopy cover	Soil caught
10 percent	55
25 percent	52
40 percent	49
60 percent	46

Which choice most effectively uses data from the table to support the student's claim?

A) 25 percent and 40 percent show the same value.

B) 60 percent shows a value of 55 grams.

C) 10 percent shows a lower value (55 grams) than 60 percent (46 grams).

D) 60 percent shows a lower value (46 grams) than 10 percent (55 grams).

Information and Ideas: Inferences

486. *Medium — complete the inference*
Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. In the study, she measured pavement temperature on tree-lined blocks and on bare blocks. The results showed that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks. A further observation pointed the same way: After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the study never measured anything related to afternoon pavement temperatures in one neighborhood.

C) the result, that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks, and the later observation point the same way.

D) the result contradicts the claim that blocks with street trees have cooler midafternoon pavement than blocks without them.

487. *Medium — inference with a stated limit*
Dr. Elena Voss has studied kelp forests along the California coast. Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock. Voss notes, however, that the divers did not count adult rockfish.

Which choice is most strongly supported by the text?

A) Because the divers did not count adult rockfish, the result described in the text cannot be stated at all.

B) The study was abandoned before any results were collected.

C) The study proves that standing kelp is associated with higher numbers of juvenile rockfish in every place and in every year.

D) In the cases the study describes, the reported result lines up with the claim that standing kelp is associated with higher numbers of juvenile rockfish, though the text also marks a limit.

488. *Hard — inference from a literary text*
On the night before the recital, Marisol played the same four measures until the notes were even. She let her brother's call ring unanswered. When she finally turned out the light, she left the music open on the stand.

Which choice is most strongly supported by the text?

A) Marisol's brother is angry with her for not answering.

B) Marisol is treating the recital as more pressing, that night, than the phone call.

C) Marisol will win a prize at the recital.

D) Marisol dislikes playing music.

489. *Medium — complete the inference*
Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out. A further observation pointed the same way: Letters written in pencil on the same desks showed no such holes. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result contradicts the claim that iron-gall ink is associated with holes and cracks in the paper beneath it.

B) the result, that the inked lines were often the places where the paper had cracked or fallen out, and the later observation point the same way.

C) the study never measured anything related to iron-gall ink on nineteenth-century letters.

D) the later observation cancels the result, so the text supports no conclusion.

490. *Medium — inference with a stated limit*
Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters. Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out. Cho notes, however, that she did not test modern inks.

Which choice is most strongly supported by the text?

A) The study was abandoned before any results were collected.

B) In the cases the study describes, the reported result lines up with the claim that iron-gall ink is associated with holes and cracks in the paper beneath it, though the text also marks a limit.

C) The study proves that iron-gall ink is associated with holes and cracks in the paper beneath it in every place and in every year.

D) Because she did not test modern inks, the result described in the text cannot be stated at all.

491. *Hard — inference from a literary text*
Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice is most strongly supported by the text?

A) A boat Ellis is watching for is later than the others that use the harbor.

B) The other crews refused to speak to him.

C) The missing boat has sunk.

D) Ellis is the harbor master.

492. *Medium — complete the inference*
Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. A further observation pointed the same way: The same rooftops had lower counts during a week of heavy smoke. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result contradicts the claim that rooftop hives in that city hold more bee species than the nearby park.

B) the later observation cancels the result, so the text supports no conclusion.

C) the result, that the rooftop count was higher than the park count, and the later observation point the same way.

D) the study never measured anything related to bees in rooftop hives and in a suburban park.

493. *Medium — inference with a stated limit*
Dr. Imani Cole has studied bees in rooftop hives and in a suburban park. Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. Cole notes, however, that one year cannot show whether the city is safer for bees over time.

Which choice is most strongly supported by the text?

A) In the cases the study describes, the reported result lines up with the claim that rooftop hives in that city hold more bee species than the nearby park, though the text also marks a limit.

B) Because one year cannot show whether the city is safer for bees over time, the result described in the text cannot be stated at all.

C) The study was abandoned before any results were collected.

D) The study proves that rooftop hives in that city hold more bee species than the nearby park in every place and in every year.

494. *Hard — inference from a literary text*
Lena labeled the last box and then opened it again to check the blue bowl. It was there, wrapped, where she had put it. She carried that box to the truck herself and set it behind the driver's seat, not with the stack of boxes she had told the movers to take.

Which choice is most strongly supported by the text?

A) The blue bowl was a gift from the movers.

B) The movers have stolen a box.

C) The blue bowl matters to Lena more than the ordinary contents of the other boxes.

D) Lena is moving to another country.

495. *Medium — complete the inference*
Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard. A further observation pointed the same way: The gap was larger in precincts that had low turnout the year before. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the result, that turnout was higher in the precincts that received the postcard, and the later observation point the same way.

C) the result contradicts the claim that a mailed reminder is associated with slightly higher turnout.

D) the study never measured anything related to turnout in a local election.

496. *Medium — inference with a stated limit*
Dr. Andrei Sokolov has studied algae on a melting glacier. Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae. Sokolov notes, however, that the team did not compare air temperatures above the plots.

Which choice is most strongly supported by the text?

A) The study proves that darker algae on the ice is associated with faster local melt in every place and in every year.

B) Because the team did not compare air temperatures above the plots, the result described in the text cannot be stated at all.

C) In the cases the study describes, the reported result lines up with the claim that darker algae on the ice is associated with faster local melt, though the text also marks a limit.

D) The study was abandoned before any results were collected.

497. *Hard — inference from a literary text*
James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice is most strongly supported by the text?

A) The person he wrote to has already forgiven him.

B) James does not believe he did anything wrong, and the letter says so.

C) The letter was too long for the mailbox.

D) James is not yet willing to send the apology he has written.

498. *Medium — complete the inference*
Dr. Grace Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. In the study, she recorded discussions and then scored the written summaries. The results showed that summaries from students who had switched languages scored as high as summaries from students who had not. A further observation pointed the same way: Teachers who had expected confusion found the written work orderly. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result, that summaries from students who had switched languages scored as high as summaries from students who had not, and the later observation point the same way.

B) the later observation cancels the result, so the text supports no conclusion.

C) the study never measured anything related to students who switch languages during class discussion.

D) the result contradicts the claim that students who switched languages in discussion still wrote clear summaries in the language of the exam.

499. *Medium — inference with a stated limit*
Dr. Marco Bell has studied clay pots from a riverside workshop. Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots. Bell notes, however, that he did not test whether the pots survived later use over a fire.

Which choice is most strongly supported by the text?

A) The study was abandoned before any results were collected.

B) In the cases the study describes, the reported result lines up with the claim that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand, though the text also marks a limit.

C) The study proves that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand in every place and in every year.

D) Because he did not test whether the pots survived later use over a fire, the result described in the text cannot be stated at all.

500. *Hard — inference from a literary text*
After the guests left, Rosa stayed in the kitchen and washed the same plate twice. The good glasses were still in the cupboard; she had served water in ordinary cups. She turned the porch light off only when the street was empty.

Which choice is most strongly supported by the text?

A) Rosa had been worried about how the visit would go.

B) The porch light is broken.

C) Rosa is about to move out of the house.

D) The guests refused to drink what she offered.

501. *Medium — complete the inference*
Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots. A further observation pointed the same way: Pots with no temper at all cracked most often. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the study never measured anything related to clay pots from a riverside workshop.

B) the result contradicts the claim that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.

C) the result, that fewer shell-tempered pots cracked than sand-tempered pots, and the later observation point the same way.

D) the later observation cancels the result, so the text supports no conclusion.

502. *Medium — inference with a stated limit*
Dr. Nora Feldman has studied a reef after a heat wave. Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them. Feldman notes, however, that the divers did not measure fish counts on the reef.

Which choice is most strongly supported by the text?

A) Because the divers did not measure fish counts on the reef, the result described in the text cannot be stated at all.

B) The study was abandoned before any results were collected.

C) In the cases the study describes, the reported result lines up with the claim that corals that kept their algal partners kept more of their color than corals that expelled them, though the text also marks a limit.

D) The study proves that corals that kept their algal partners kept more of their color than corals that expelled them in every place and in every year.

503. *Hard — inference from a literary text*
On the late bus, Malik reread the sentence he had underlined that morning. At his stop he did not get off. He rode to the end of the line, still mouthing the words, and only then walked back toward home.

Which choice is most strongly supported by the text?

A) Malik cannot read without saying the words aloud in class.

B) The underlined sentence holds Malik's attention more strongly than the routine of getting off at his stop.

C) The sentence he underlined is from a letter rejecting him.

D) Malik has missed the last bus home and will have to sleep at the station.

504. *Medium — complete the inference*
Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them. A further observation pointed the same way: The following cool month, some pale colonies regained color as algae returned. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the study never measured anything related to a reef after a heat wave.

C) the result, that colonies that kept their algae stayed darker than colonies that expelled them, and the later observation point the same way.

D) the result contradicts the claim that corals that kept their algal partners kept more of their color than corals that expelled them.

505. *Medium — inference with a stated limit*
Dr. Fatima Noor has studied small loans to market vendors. Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months. Noor notes, however, that the study does not show that every loan was spent on the business.

Which choice is most strongly supported by the text?

A) In the cases the study describes, the reported result lines up with the claim that vendors who received a loan were more likely to still be trading six months later than vendors who did not, though the text also marks a limit.

B) Because the study does not show that every loan was spent on the business, the result described in the text cannot be stated at all.

C) The study was abandoned before any results were collected.

D) The study proves that vendors who received a loan were more likely to still be trading six months later than vendors who did not in every place and in every year.

506. *Hard — inference from a literary text*
Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice is most strongly supported by the text?

A) The audience has already left.

B) Anya will forget her lines.

C) Anya dislikes the play she is about to perform.

D) Anya feels nervous before the performance and has a way of settling herself.

507. *Medium — complete the inference*
Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics. In the study, she played matched cylinders whose only known difference was the storage room. The results showed that more words were intelligible on the cool-room cylinders than on the attic cylinders. A further observation pointed the same way: A cylinder moved from an attic to a cool room did not regain the words already lost. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result contradicts the claim that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics.

B) the later observation cancels the result, so the text supports no conclusion.

C) the study never measured anything related to wax-cylinder recordings from the 1890s.

D) the result, that more words were intelligible on the cool-room cylinders than on the attic cylinders, and the later observation point the same way.

508. *Medium — inference with a stated limit*
Dr. Alice Peng has studied rehearsal notes for a 1936 production. Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand. Peng notes, however, that the notes do not say whether audiences liked the shorter version.

Which choice is most strongly supported by the text?

A) The study proves that the director cut a scene in order to keep the running time under two hours in every place and in every year.

B) Because the notes do not say whether audiences liked the shorter version, the result described in the text cannot be stated at all.

C) In the cases the study describes, the reported result lines up with the claim that the director cut a scene in order to keep the running time under two hours, though the text also marks a limit.

D) The study was abandoned before any results were collected.

509. *Hard — inference from a literary text*
The book had been due for a month. Sam slid it across the counter without the excuse he had rehearsed. The librarian stamped it, said nothing about the fine, and Sam, who had expected a lecture, thanked her twice.

Which choice is most strongly supported by the text?

A) The librarian does not notice that the book is late.

B) Sam cannot afford any fine and says so.

C) The book was never checked out in Sam's name.

D) Sam had expected to be rebuked for returning the book late.

510. *Medium — complete the inference*
Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday. In the study, her team compared blocks with measured canopy percentages. The results showed that blocks with more canopy had cooler midday surfaces. A further observation pointed the same way: A block that lost canopy to pruning warmed the next summer. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result, that blocks with more canopy had cooler midday surfaces, and the later observation point the same way.

B) the result contradicts the claim that larger canopy cover is associated with cooler surfaces at midday.

C) the study never measured anything related to summer surface temperatures under city trees.

D) the later observation cancels the result, so the text supports no conclusion.

511. *Medium — inference with a stated limit*
Dr. Rosa Nguyen has studied willows in a valley where wolves had returned. Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. Nguyen notes, however, that she did not measure bird nests in the willows.

Which choice is most strongly supported by the text?

A) Because she did not measure bird nests in the willows, the result described in the text cannot be stated at all.

B) In the cases the study describes, the reported result lines up with the claim that willow seedlings grew taller on banks where browsing decreased after wolves returned, though the text also marks a limit.

C) The study was abandoned before any results were collected.

D) The study proves that willow seedlings grew taller on banks where browsing decreased after wolves returned in every place and in every year.

512. *Hard — inference from a literary text*
It was still dark when Mr. Okonkwo unlocked the bakery. He set aside the first tray, the one with the cracked edge, for his own breakfast, and he put the even loaves in the window. By the time the streetlight went out, the window was full and the cracked tray was already half gone.

Which choice is most strongly supported by the text?

A) Mr. Okonkwo would rather sell the even loaves than the cracked ones.

B) He baked nothing that morning.

C) The streetlight is inside the bakery.

D) Customers refuse to buy bread from his shop.

513. *Medium — complete the inference*
Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand. A further observation pointed the same way: A later revival restored the scene and ran past two hours. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result, that the cut scene was the one marked 'too long' in the director's hand, and the later observation point the same way.

B) the study never measured anything related to rehearsal notes for a 1936 production.

C) the later observation cancels the result, so the text supports no conclusion.

D) the result contradicts the claim that the director cut a scene in order to keep the running time under two hours.

514. *Medium — inference with a stated limit*
Dr. Leo Martins has studied a restored wetland beside a river. Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry. Martins notes, however, that the gauges were not left in place over the winter.

Which choice is most strongly supported by the text?

A) Because the gauges were not left in place over the winter, the result described in the text cannot be stated at all.

B) In the cases the study describes, the reported result lines up with the claim that the wetland held floodwater that would otherwise have reached the road, though the text also marks a limit.

C) The study proves that the wetland held floodwater that would otherwise have reached the road in every place and in every year.

D) The study was abandoned before any results were collected.

515. *Hard — inference from a literary text*
The museum had closed, but Dana stayed on the step with her sketch of the statue she had not been allowed to finish. She added the hand from memory and then erased it. The guard who locked the side door nodded at the page and did not tell her to leave.

Which choice is most strongly supported by the text?

A) The museum will open again in a few minutes.

B) Dana is not satisfied with drawing the statue's hand from memory alone.

C) The guard is going to confiscate the sketch.

D) Dana has never seen the statue.

516. *Medium — complete the inference*
Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. A further observation pointed the same way: A fenced plot that excluded browsers grew tall willows even before wolf numbers rose. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the study never measured anything related to willows in a valley where wolves had returned.

B) the later observation cancels the result, so the text supports no conclusion.

C) the result, that banks with fewer signs of browsing had taller willow seedlings, and the later observation point the same way.

D) the result contradicts the claim that willow seedlings grew taller on banks where browsing decreased after wolves returned.

517. *Medium — inference with a stated limit*
Dr. Sophie Bernard has studied passive voice in lab reports. Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain. Bernard notes, however, that she did not test whether scientists themselves prefer one voice.

Which choice is most strongly supported by the text?

A) The study proves that readers judged reports written in the passive voice to sound more certain, even when the results were the same in every place and in every year.

B) Because she did not test whether scientists themselves prefer one voice, the result described in the text cannot be stated at all.

C) The study was abandoned before any results were collected.

D) In the cases the study describes, the reported result lines up with the claim that readers judged reports written in the passive voice to sound more certain, even when the results were the same, though the text also marks a limit.

518. *Medium — complete the inference*
Dr. Hannah Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores. In the study, she collected reported hours and quiz scores from the same students. The results showed that students with more reported hours had higher scores on average. A further observation pointed the same way: The top scores also belonged to students who had scored high before the homework was assigned. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result, that students with more reported hours had higher scores on average, and the later observation point the same way.

B) the result contradicts the claim that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores.

C) the study never measured anything related to homework hours and quiz scores in one course.

D) the later observation cancels the result, so the text supports no conclusion.

519. *Medium — inference with a stated limit*
Dr. June Harlow has studied murals painted for public buildings in the 1930s. Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. In the study, she compared contract language with dated sketches. The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work. Harlow notes, however, that she did not interview anyone who watched the murals being painted.

Which choice is most strongly supported by the text?

A) The study was abandoned before any results were collected.

B) Because she did not interview anyone who watched the murals being painted, the result described in the text cannot be stated at all.

C) In the cases the study describes, the reported result lines up with the claim that the contracts required the murals to show local work, and the surviving sketches match that requirement, though the text also marks a limit.

D) The study proves that the contracts required the murals to show local work, and the surviving sketches match that requirement in every place and in every year.

520. *Medium — complete the inference*
Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does. In the study, he compared dated letters with the notice printed the same year. The results showed that the letters name start and end times that add up to more hours than the notice lists. A further observation pointed the same way: A company ledger of wages for piecework does not list hours at all. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the result, that the letters name start and end times that add up to more hours than the notice lists, and the later observation point the same way.

C) the study never measured anything related to a mill town in the 1840s.

D) the result contradicts the claim that letters from workers describe longer hours than the company's posted notice does.

521. *Medium — inference with a stated limit*
Dr. Karen Ito has studied a city that stopped charging library overdue fines. Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended. Ito notes, however, that other changes, including longer open hours, happened in the same months.

Which choice is most strongly supported by the text?

A) The study was abandoned before any results were collected.

B) In the cases the study describes, the reported result lines up with the claim that more overdue books came back in the months after fines ended than in the months before, though the text also marks a limit.

C) The study proves that more overdue books came back in the months after fines ended than in the months before in every place and in every year.

D) Because other changes, including longer open hours, happened in the same months, the result described in the text cannot be stated at all.

522. *Medium — complete the inference*
Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain. A further observation pointed the same way: When she told a second group of readers to look only at the numbers, the ratings of certainty evened out. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the result, that readers rated the passive versions as more certain, and the later observation point the same way.

C) the result contradicts the claim that readers judged reports written in the passive voice to sound more certain, even when the results were the same.

D) the study never measured anything related to passive voice in lab reports.

523. *Medium — inference with a stated limit*
Dr. Clara Mendes has studied a 1602 coastal chart. Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey. Mendes notes, however, that she did not claim the coastline itself had moved.

Which choice is most strongly supported by the text?

A) In the cases the study describes, the reported result lines up with the claim that the 1602 chart shows a bay that later surveys place farther west, though the text also marks a limit.

B) Because she did not claim the coastline itself had moved, the result described in the text cannot be stated at all.

C) The study proves that the 1602 chart shows a bay that later surveys place farther west in every place and in every year.

D) The study was abandoned before any results were collected.

524. *Medium — complete the inference*
Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. In the study, she compared contract language with dated sketches. The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work. A further observation pointed the same way: A mural whose contract has been lost shows a similar harvest scene. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the result contradicts the claim that the contracts required the murals to show local work, and the surviving sketches match that requirement.

C) the study never measured anything related to murals painted for public buildings in the 1930s.

D) the result, that the sketches show occupations named in the contracts, such as harvesting and mill work, and the later observation point the same way.

525. *Medium — inference with a stated limit*
Dr. Yara Hassan has studied compost piles and weed seeds. Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. In the study, she buried seed packets at measured temperatures and then tried to sprout them. The results showed that fewer seeds sprouted from the hot center than from the cool edge. Hassan notes, however, that she did not test crop seeds that a gardener might want to survive.

Which choice is most strongly supported by the text?

A) The study proves that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge in every place and in every year.

B) The study was abandoned before any results were collected.

C) Because she did not test crop seeds that a gardener might want to survive, the result described in the text cannot be stated at all.

D) In the cases the study describes, the reported result lines up with the claim that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge, though the text also marks a limit.

526. *Medium — complete the inference*
Dr. Tanya Brooks claims that no-till fields lost less soil in heavy rain than plowed fields beside them. In the study, she weighed soil caught below both kinds of fields after the same storm. The results showed that less soil was caught below the no-till fields. A further observation pointed the same way: After the no-till fields were plowed for a new crop, the next storm carried more soil. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the result, that less soil was caught below the no-till fields, and the later observation point the same way.

C) the study never measured anything related to fields farmed without plowing.

D) the result contradicts the claim that no-till fields lost less soil in heavy rain than plowed fields beside them.

527. *Medium — inference with a stated limit*
Dr. Paolo Ricci has studied seedlings grown with soil fungi. Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks. Ricci notes, however, that he did not measure the seedlings' survival through winter.

Which choice is most strongly supported by the text?

A) The study was abandoned before any results were collected.

B) Because he did not measure the seedlings' survival through winter, the result described in the text cannot be stated at all.

C) The study proves that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them in every place and in every year.

D) In the cases the study describes, the reported result lines up with the claim that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them, though the text also marks a limit.

528. *Medium — complete the inference*
Dr. Omar Farid claims that the same vans traveled fewer miles per charge on cold mornings than on mild ones. In the study, drivers logged miles and temperature for identical routes. The results showed that miles per charge were lower when the morning temperature was lower. A further observation pointed the same way: Using a garage that kept the vans warm overnight reduced the loss. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the result contradicts the claim that the same vans traveled fewer miles per charge on cold mornings than on mild ones.

C) the study never measured anything related to range of electric delivery vans in cold weather.

D) the result, that miles per charge were lower when the morning temperature was lower, and the later observation point the same way.

529. *Medium — inference with a stated limit*
Dr. Sara Lind has studied a reading-speed test of two typefaces. Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same. Lind notes, however, that the study did not include children.

Which choice is most strongly supported by the text?

A) Because the study did not include children, the result described in the text cannot be stated at all.

B) The study was abandoned before any results were collected.

C) The study proves that the study found no reliable difference in reading speed between the two typefaces in every place and in every year.

D) In the cases the study describes, the reported result lines up with the claim that the study found no reliable difference in reading speed between the two typefaces, though the text also marks a limit.

530. *Medium — complete the inference*
Dr. Clara Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey. A further observation pointed the same way: A note on the 1602 chart says the bay was sketched from a moving ship. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the later observation cancels the result, so the text supports no conclusion.

B) the study never measured anything related to a 1602 coastal chart.

C) the result, that the bay drawn in 1602 sits east of the bay on the later survey, and the later observation point the same way.

D) the result contradicts the claim that the 1602 chart shows a bay that later surveys place farther west.

531. *Medium — inference with a stated limit*
Dr. Brian Holt has studied helmet use and head injuries in a city bike-share program. Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet. Holt notes, however, that the survey cannot separate the helmet from the other habits of the riders who wear one.

Which choice is most strongly supported by the text?

A) Because the survey cannot separate the helmet from the other habits of the riders who wear one, the result described in the text cannot be stated at all.

B) The study was abandoned before any results were collected.

C) In the cases the study describes, the reported result lines up with the claim that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational, though the text also marks a limit.

D) The study proves that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational in every place and in every year.

532. *Medium — complete the inference*
Dr. Yara Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. In the study, she buried seed packets at measured temperatures and then tried to sprout them. The results showed that fewer seeds sprouted from the hot center than from the cool edge. A further observation pointed the same way: Seeds held at the same high temperature in an oven also failed to sprout. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result contradicts the claim that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge.

B) the study never measured anything related to compost piles and weed seeds.

C) the result, that fewer seeds sprouted from the hot center than from the cool edge, and the later observation point the same way.

D) the later observation cancels the result, so the text supports no conclusion.

533. *Medium — inference with a stated limit*
Dr. Ellen Zhou has studied dust layers in an ice core. Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry. Zhou notes, however, that the core does not name the source of every grain of dust.

Which choice is most strongly supported by the text?

A) The study proves that thicker dust layers in the core line up with years the nearby valley recorded as drought in every place and in every year.

B) In the cases the study describes, the reported result lines up with the claim that thicker dust layers in the core line up with years the nearby valley recorded as drought, though the text also marks a limit.

C) The study was abandoned before any results were collected.

D) Because the core does not name the source of every grain of dust, the result described in the text cannot be stated at all.

534. *Medium — complete the inference*
Dr. Emily Cho claims that attendance was higher on days with a scheduled garden lesson than on other days that week. In the study, she compared attendance rolls within the same classrooms. The results showed that fewer students were absent on garden days. A further observation pointed the same way: The garden days were also days when a popular teacher was present. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result contradicts the claim that attendance was higher on days with a scheduled garden lesson than on other days that week.

B) the study never measured anything related to attendance on days when a school garden was used.

C) the later observation cancels the result, so the text supports no conclusion.

D) the result, that fewer students were absent on garden days, and the later observation point the same way.

535. *Medium — inference with a stated limit*
Dr. Nadia Korol has studied desert varnish on sunlit rocks. Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour. Korol notes, however, that she did not determine whether microbes or chemistry laid the varnish down.

Which choice is most strongly supported by the text?

A) In the cases the study describes, the reported result lines up with the claim that the varnish is thicker on rocks that stay damp longer after rare rains, though the text also marks a limit.

B) The study was abandoned before any results were collected.

C) The study proves that the varnish is thicker on rocks that stay damp longer after rare rains in every place and in every year.

D) Because she did not determine whether microbes or chemistry laid the varnish down, the result described in the text cannot be stated at all.

536. *Medium — complete the inference*
Dr. Lydia Grant claims that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday. In the study, she read both documents side by side. The results showed that the diary's Tuesday entry describes the fire, and the headline says Thursday. A further observation pointed the same way: A later correction in the newspaper moves the date to Tuesday. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the study never measured anything related to a newspaper and a diary from the week of a town fire.

B) the result contradicts the claim that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday.

C) the later observation cancels the result, so the text supports no conclusion.

D) the result, that the diary's Tuesday entry describes the fire, and the headline says Thursday, and the later observation point the same way.

537. *Medium — inference with a stated limit*
Dr. Sylvia Markham has studied recipes in an eighteenth-century household book. Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. In the study, she sorted the dated recipes by the season written beside them. The results showed that winter recipes list dried fruit more often and fresh herbs less often. Markham notes, however, that the book does not say which recipes were actually cooked.

Which choice is most strongly supported by the text?

A) Because the book does not say which recipes were actually cooked, the result described in the text cannot be stated at all.

B) The study proves that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes in every place and in every year.

C) In the cases the study describes, the reported result lines up with the claim that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes, though the text also marks a limit.

D) The study was abandoned before any results were collected.

538. *Medium — complete the inference*
Dr. Sara Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same. A further observation pointed the same way: Readers did report a preference, even though their speeds matched. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the result contradicts the claim that the study found no reliable difference in reading speed between the two typefaces.

B) the later observation cancels the result, so the text supports no conclusion.

C) the study never measured anything related to a reading-speed test of two typefaces.

D) the result, that average times for the two typefaces were nearly the same, and the later observation point the same way.

539. *Medium — inference with a stated limit*
Dr. Angela Brooks has studied audience copies of a poem and library loans of the same book. Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before. Brooks notes, however, that the loan records do not show whether the borrowers attended the reading.

Which choice is most strongly supported by the text?

A) In the cases the study describes, the reported result lines up with the claim that loans of the book rose in the month after a public reading and fell again later, though the text also marks a limit.

B) The study was abandoned before any results were collected.

C) Because the loan records do not show whether the borrowers attended the reading, the result described in the text cannot be stated at all.

D) The study proves that loans of the book rose in the month after a public reading and fell again later in every place and in every year.

540. *Medium — complete the inference*
Dr. Brian Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet. A further observation pointed the same way: Helmeted riders also reported slower average speeds. The most reasonable conclusion is that _____.

Which choice most logically completes the text?

A) the study never measured anything related to helmet use and head injuries in a city bike-share program.

B) the later observation cancels the result, so the text supports no conclusion.

C) the result, that helmeted riders reported fewer head injuries than riders who reported no helmet, and the later observation point the same way.

D) the result contradicts the claim that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational.

Standard English Conventions: Boundaries

541. *Easy — comma and a coordinating conjunction*
The harbor froze overnight_____ferry service was suspended until noon.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) , so

C) so

D) ; so

542. *Easy — no comma between subject and verb*
The bundle of maps _____ stored in the cedar chest.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; is

B) is

C) is,

D) , is

543. *Easy — semicolon between independent clauses*
Jonah collects postage stamps_____his sister collects coins.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) :

B) or

C) ;

D) ,

544. *Medium — colon before a list*
The field kit contained three tools_____a wrench, a file, and a clamp.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) :

B) .

C) ;

D) , and

545. *Medium — commas around a nonrestrictive phrase*
The violin_____was stored in a felt case.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , a gift from her aunt,

B) a gift from her aunt

C) a gift from her aunt,

D) , a gift from her aunt

546. *Medium — dashes around extra information*
The kiln _____ was heated too quickly.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) an old brick model —

B) — an old brick model —

C) — an old brick model,

D) — an old brick model

547. *Medium — no comma in a compound predicate*
Jonah finished the glaze_____checked the kiln temperature.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , and

B) ;

C) and

D) ,

548. *Medium — possessive form*
Both painters contributed to the show. The exhibit featured the two _____ sketches, one from each painter.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) artists'

B) artists's

C) artists

D) artist's

549. *Medium — semicolon with however*
The trail is steep at the start_____the last mile is nearly flat.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; however,

B) , however,

C) ; however

D) however,

550. *Medium — semicolon with therefore*
The kiln was heated too quickly_____the glaze blistered.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; therefore

B) therefore,

C) , therefore,

D) ; therefore,

551. *Hard — restrictive information, no extra commas*
Paintings _____ were removed from the exhibit, while the undamaged ones stayed.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) which were water-damaged

B) , which were water-damaged,

C) that were water-damaged

D) , that were water-damaged,

552. *Easy — comma and a coordinating conjunction*
Jonah finished the glaze_____his sister prepared the kiln.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , and

B) ; and

C) ,

D) and

553. *Easy — no comma between subject and verb*
Each of the swimmers _____ a spare cap in the bag.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) has

B) has,

C) , has

D) ; has

554. *Easy — semicolon between independent clauses*
The north gallery displays portraits_____the south gallery displays landscapes.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) :

C) ,

D) or

555. *Medium — colon before a list*
Mara packed only what she needed_____a pencil, a notebook, and a map.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , and

B) ;

C) .

D) :

556. *Medium — commas around a nonrestrictive phrase*
The courtyard_____is now a reading garden.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) once a stable yard,

B) , once a stable yard

C) , once a stable yard,

D) once a stable yard

557. *Medium — dashes around extra information*
Her violin _____ needed a new bridge.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) — a gift from her uncle,

B) — a gift from her uncle —

C) — a gift from her uncle

D) a gift from her uncle —

558. *Medium — no comma in a compound predicate*
Lina revised the caption_____sent the file to the printer.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , and

B) ,

C) and

D) ;

559. *Medium — possessive form*
The three students turned in a single shared paper. The teacher graded the _____ report before noon.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) students's

B) student's

C) students

D) students'

560. *Medium — semicolon with however*
The sky looked clear at dawn_____rain began before noon.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; however

B) ; however,

C) , however,

D) however,

561. *Medium — semicolon with therefore*
Salt had been left on the steel_____the tools rusted.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; therefore,

B) ; therefore

C) therefore,

D) , therefore,

562. *Hard — restrictive information, no extra commas*
_____ will be registered, but those who miss the deadline will not.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Students, that submit the form by Friday,

B) Students who, submit the form by Friday

C) Students who submit the form by Friday

D) Students, who submit the form by Friday,

563. *Easy — comma and a coordinating conjunction*
Rain soaked the clay court_____the match was moved indoors.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; so

B) , so

C) so

D) ,

564. *Easy — no comma between subject and verb*
Neither of the gates _____ open after dusk.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) is,

B) is

C) , is

D) ; is

565. *Easy — semicolon between independent clauses*
Tuesday's lecture is on glaciers_____Thursday's lecture is on rivers.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) ,

C) or

D) :

566. *Medium — colon before a list*
The recipe calls for three spices_____cumin, coriander, and cinnamon.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) :

B) , and

C) ;

D) .

567. *Medium — commas around a nonrestrictive phrase*
The sycamore_____shades the entire porch.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) the oldest tree on the block

B) , the oldest tree on the block

C) , the oldest tree on the block,

D) the oldest tree on the block,

568. *Medium — dashes around extra information*
The essay _____ appeared in the spring issue.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) — her first published piece

B) — her first published piece —

C) — her first published piece,

D) her first published piece —

569. *Medium — no comma in a compound predicate*
Maya tuned the violin_____rosined the bow.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) ;

C) and

D) , and

570. *Medium — possessive form*
Two cities issued a joint statement. The _____ statement was read at both city halls.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) city's

B) cities'

C) cities

D) citys'

571. *Medium — semicolon with however*
The recipe looks complicated_____it uses only four ingredients.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; however

B) however,

C) ; however,

D) , however,

572. *Medium — semicolon with therefore*
The seedlings received no water for a week_____most of them wilted.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) therefore,

B) ; therefore,

C) , therefore,

D) ; therefore

573. *Hard — restrictive information, no extra commas*
_____ rusted, although the tools stored in the shed did not.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Tools that were left outside

B) Tools which, were left outside

C) Tools, which were left outside,

D) Tools, that were left outside,

574. *Easy — comma and a coordinating conjunction*
The road was closed for repairs_____drivers followed the river route.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) so

C) ; so

D) , so

575. *Easy — no comma between subject and verb*
Everybody on the two crews _____ the revised schedule.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; has

B) has

C) has,

D) , has

576. *Easy — semicolon between independent clauses*
The first letter is dated 1864_____the second letter is dated 1867.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) :

C) or

D) ;

577. *Medium — colon before a list*
The scholarship covers three costs_____tuition, housing, and books.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) :

C) .

D) , and

578. *Medium — commas around a nonrestrictive phrase*
Captain Ruiz_____kept a daily log.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , commander of the second expedition

B) commander of the second expedition

C) commander of the second expedition,

D) , commander of the second expedition,

579. *Medium — dashes around extra information*
The clock _____ was left on the mantel.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) — stopped since April

B) stopped since April —

C) — stopped since April —

D) — stopped since April,

580. *Medium — no comma in a compound predicate*
Omar printed the chart_____taped it beside the door.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) , and

C) and

D) ,

581. *Medium — possessive form*
Several workers left their helmets in a row. The supervisor collected the _____ helmets after the shift.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) workers

B) worker's

C) workers's

D) workers'

582. *Medium — semicolon with however*
The outer wall is plain_____the interior is richly painted.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; however,

B) , however,

C) ; however

D) however,

583. *Medium — semicolon with therefore*
A page was missing from the score_____the quartet stopped in the third movement.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; therefore,

B) ; therefore

C) therefore,

D) , therefore,

584. *Hard — restrictive information, no extra commas*
_____ may enter before noon, and visitors without tickets must wait.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Visitors, that have tickets,

B) Visitors who have tickets

C) Visitors, who have tickets,

D) Visitors who, have tickets

585. *Easy — comma and a coordinating conjunction*
The lamp flickered_____the electrician replaced the wiring that afternoon.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) , so

C) so

D) ; so

586. *Easy — no comma between subject and verb*
One of the hinges _____ still missing from the tin.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , is

B) is

C) is,

D) ; is

587. *Easy — semicolon between independent clauses*
One path follows the creek_____the other path follows the fence.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) ;

C) or

D) :

588. *Medium — colon before a list*
The display features four objects_____a compass, a sextant, a logbook, and a flag.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) .

C) , and

D) :

589. *Medium — commas around a nonrestrictive phrase*
Dr. Shah_____finished the operation after midnight.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , the only surgeon on duty,

B) the only surgeon on duty

C) , the only surgeon on duty

D) the only surgeon on duty,

590. *Medium — dashes around extra information*
The lab _____ shares a sink with the bakery.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) — two rooms above the shop —

B) — two rooms above the shop

C) two rooms above the shop —

D) — two rooms above the shop,

591. *Medium — no comma in a compound predicate*
The editor cut the last line_____read the paragraph aloud.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) and

B) , and

C) ,

D) ;

592. *Medium — possessive form*
The two poets read from a book they wrote together. Listeners praised the _____ collaboration.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) poets

B) poets'

C) poets's

D) poet's

593. *Medium — semicolon with however*
The novel begins quietly_____its final chapter is abrupt.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; however

B) however,

C) , however,

D) ; however,

594. *Medium — semicolon with therefore*
The invitation went out late_____several guests never arrived.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , therefore,

B) therefore,

C) ; therefore

D) ; therefore,

595. *Hard — restrictive information, no extra commas*
_____ were discarded, but the samples that passed were kept.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) The samples, failing the first test,

B) Samples, that failed the first test,

C) Samples that failed the first test

D) Samples, which failed the first test,

596. *Easy — comma and a coordinating conjunction*
The pond had frozen_____the ducks remained near the open inlet.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) ; yet

C) yet

D) , yet

597. *Easy — no comma between subject and verb*
The pair of boots _____ found under the bench.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) was,

B) ; was

C) was

D) , was

598. *Easy — semicolon between independent clauses*
The poet lived in Lisbon_____the translator lived in Porto.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) :

C) or

D) ;

599. *Medium — colon before a list*
The chorus will sing three songs_____a hymn, a work song, and a lullaby.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) :

B) , and

C) .

D) ;

600. *Medium — commas around a nonrestrictive phrase*
Nova Cafe_____sits beside the theater door.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , a former ticket booth,

B) a former ticket booth

C) a former ticket booth,

D) , a former ticket booth

601. *Medium — dashes around extra information*
The recipe _____ calls for cold butter.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) — copied from a torn card —

B) — copied from a torn card,

C) copied from a torn card —

D) — copied from a torn card

602. *Medium — no comma in a compound predicate*
The mechanic tightened the bolt_____wiped oil off the rim.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) ,

C) and

D) , and

603. *Medium — possessive form*
All of the teachers shared one lounge. A notice on the board listed the _____ meeting time.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) teachers's

B) teachers'

C) teacher's

D) teachers

604. *Medium — semicolon with however*
The instructions filled one page_____the assembly still took an hour.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) however,

B) ; however

C) , however,

D) ; however,

605. *Medium — semicolon with therefore*
Ice had formed on the step_____the entrance was closed.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; therefore,

B) , therefore,

C) therefore,

D) ; therefore

606. *Hard — restrictive information, no extra commas*
_____ were elevated, whereas the houses on higher ground were left as they stood.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Houses that sit on the flood plain

B) Houses, which sit on the flood plain,

C) Houses, that sit on the flood plain,

D) Houses which sit, on the flood plain

607. *Easy — comma and a coordinating conjunction*
The novel sold steadily_____the author declined every interview.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , but

B) ,

C) but

D) ; but

608. *Easy — no comma between subject and verb*
The news about the trains _____ posted before dawn.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) was

B) , was

C) ; was

D) was,

609. *Easy — semicolon between independent clauses*
Camila coaches the novice team_____Luis coaches the advanced team.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) or

C) :

D) ,

610. *Medium — colon before a list*
The grant supports two activities_____fieldwork and laboratory analysis.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) .

B) ;

C) :

D) , and

611. *Medium — commas around a nonrestrictive phrase*
Professor Nguyen_____introduced the speaker.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , chair of the history department,

B) , chair of the history department

C) chair of the history department

D) chair of the history department,

612. *Medium — dashes around extra information*
The garden _____ now grows tomatoes.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) — once a parking lot —

B) — once a parking lot,

C) once a parking lot —

D) — once a parking lot

613. *Medium — no comma in a compound predicate*
The gardener mulched the beds_____coiled the hose.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) and

C) ,

D) , and

614. *Medium — possessive form*
The two editors marked the same page. The _____ notes appear in the margin.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) editors'

B) editor's

C) editors's

D) editors

615. *Hard — semicolon with however*
The first draft was disorganized_____the revision was clear.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; however,

B) however,

C) ; however

D) , however,

616. *Hard — semicolon with therefore*
The trail markers had been removed_____the hikers lost the route.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; therefore,

B) ; therefore

C) , therefore,

D) therefore,

617. *Hard — restrictive information, no extra commas*
_____ missed the briefing, while the players who arrived on time attended it.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Players, who arrived late,

B) Players who arrived late

C) Players, that arrived late,

D) Players who, arrived late

618. *Easy — comma and a coordinating conjunction*
Visitors may tour the garden_____they may remain in the gallery.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) ; or

C) or

D) , or

619. *Medium — no comma between subject and verb*
The list of guests _____ posted beside the kiln.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , is

B) is

C) ; is

D) is,

620. *Easy — semicolon between independent clauses*
Alicia wrote the introduction_____Ben wrote the conclusion.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) :

C) or

D) ,

621. *Medium — colon before a list*
The box held the entire correspondence_____letters, postcards, and telegrams.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) :

B) ;

C) .

D) , and

622. *Medium — commas around a nonrestrictive phrase*
Ellis Island_____processed millions of arrivals.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) a major immigration station

B) , a major immigration station,

C) , a major immigration station

D) a major immigration station,

623. *Hard — dashes around extra information*
The archive _____ opens only on Thursdays.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) a former schoolhouse —

B) — a former schoolhouse —

C) — a former schoolhouse

D) — a former schoolhouse,

624. *Hard — no comma in a compound predicate*
The archivist opened the folder_____copied the date onto a card.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) ;

C) and

D) , and

625. *Hard — possessive form*
One chemist kept a private record. She stored the reaction in the _____ notebook.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) chemists's

B) chemist's

C) chemists

D) chemists'

626. *Hard — semicolon with however*
The device is small_____it stores a large archive.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , however,

B) ; however,

C) ; however

D) however,

627. *Hard — semicolon with therefore*
The room was not ventilated_____the fumes lingered.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; therefore

B) therefore,

C) , therefore,

D) ; therefore,

628. *Hard — restrictive information, no extra commas*
_____ were filed separately from the letters that never mention it.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Letters, that mention the strike,

B) Letters, which mention the strike,

C) Letters that mention the strike

D) Letters which, mention the strike

629. *Easy — comma and a coordinating conjunction*
Elena labeled the jars_____Chris entered the dates in the notebook.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ; and

B) and

C) ,

D) , and

630. *Medium — no comma between subject and verb*
The collection of maps _____ kept in one drawer.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) , is

B) is,

C) is

D) ; is

631. *Medium — semicolon between independent clauses*
The museum opens at ten_____the library opens at noon.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ;

B) ,

C) or

D) :

632. *Medium — colon before a list*
The course has one prerequisite_____a passing grade in introductory biology.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) :

B) .

C) ;

D) , and

633. *Medium — commas around a nonrestrictive phrase*
Harlem_____appears in nearly every poem.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) the neighborhood where she grew up

B) , the neighborhood where she grew up,

C) the neighborhood where she grew up,

D) , the neighborhood where she grew up

634. *Hard — dashes around extra information*
The harbor _____ now handles mostly ferries.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) once a fishing port —

B) — once a fishing port

C) — once a fishing port,

D) — once a fishing port —

635. *Hard — no comma in a compound predicate*
The crew measured the wall_____marked the studs with chalk.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,

B) ;

C) and

D) , and

636. *Hard — possessive form*
Each child wrote a separate card. The teacher hung every _____ card on the wall.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) child's

B) childrens'

C) children

D) childs

745. *Medium — parallel structure*
Successful notes are dated, legible, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) being specific

B) with specifics included

C) they have specificity

D) specific

746. *Medium — plural pronoun they*
When the musicians reach the chorus, _____ should watch the conductor.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) you

B) he or she

C) they

D) it

747. *Medium — singular subject, singular verb*
The box of nails _____ left on the bench yesterday.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) was

B) are

C) were

D) have been

748. *Hard — verb agrees with the nearer subject*
This morning, either the interns or the director _____ answering the main phone.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) have been

B) were

C) are

D) is

749. *Hard — whom as the object*
The coach _____ the players chose spoke briefly after the game.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) whom

B) who

C) whose

D) which

750. *Easy — its, not it's*
The river altered _____ course after the flood.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) its

B) their

C) theirs

D) it's

751. *Easy — simple past after a past marker*
In 2004 the lab published the paper and _____ the raw data online.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) posted

B) posts

C) has posted

D) will post

752. *Medium — compound subject joined by and*
Last winter the plumber and the carpenter _____ the leak.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) found

B) will find

C) has found

D) finds

753. *Medium — modifier next to the right noun*
_____, the student circled the unfamiliar term.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Reading the assignment

B) Printed in small type

C) Discussed in the previous class

D) Assigned on Monday

754. *Medium — parallel structure*
The chef told the apprentices to wash the greens, to dry them, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) to dress the salad

B) the salad is dressed

C) they dressed the salad

D) dressing the salad

755. *Medium — plural pronoun they*
After the hikers cross the bridge, _____ will see the cabin.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) you

B) one

C) they

D) it

756. *Medium — singular subject, singular verb*
Everybody in the two sections _____ received the new schedule.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) are

B) has

C) have

D) is

757. *Hard — verb agrees with the nearer subject*
This morning, either the director or the interns _____ sorting the mail.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) has been

B) was

C) are

D) is

758. *Hard — whom as the object*
The witness _____ the lawyer questioned answered without notes.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) whose

B) who

C) whom

D) which

759. *Easy — its, not it's*
The orchestra postponed _____ opening concert.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) it's

B) its

C) theirs

D) their

760. *Easy — simple past after a past marker*
Last night the actor forgot a line and _____ until the prompt came.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) pauses

B) has paused

C) will pause

D) paused

761. *Medium — compound subject joined by and*
Yesterday the guide and the ranger _____ the washed-out trail.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) has closed

B) closed

C) will close

D) closes

762. *Medium — modifier next to the right noun*
_____, the nurse checked the chart again.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Clipped to the bed rail

B) Updated by the night shift

C) Entering the room

D) Filled out in blue ink

763. *Hard — parallel structure*
The plan calls for raising the wall, widening the gate, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) the roof is replaced

B) replacement of roofing

C) to replace the roof

D) replacing the roof

764. *Medium — plural pronoun they*
If the authors approve the edits, _____ will sign the form.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) he

B) you

C) it

D) they

765. *Medium — singular subject, singular verb*
The set of instructions _____ taped inside the lid.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) are

B) were

C) is

D) have been

766. *Hard — verb agrees with the nearer subject*
At noon, neither the violin nor the flutes _____ in tune.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) is

B) were

C) are

D) was

767. *Easy — its, not it's*
The phone dropped _____ signal inside the tunnel.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) it's

B) their

C) theirs

D) its

768. *Easy — simple past after a past marker*
In 1972 the council banned the dye and _____ local workshops to comply.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) requires

B) will require

C) has required

D) required

769. *Medium — compound subject joined by and*
In 1881 the inventor and the machinist _____ the first model.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) will test

B) has tested

C) tested

D) tests

770. *Medium — modifier next to the right noun*
_____, the photographer waited for the cloud to pass.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Purchased at a local shop

B) Loaded with fresh film

C) Left on the tripod

D) Raising the camera

771. *Hard — parallel structure*
The course trains students in reading closely, writing clearly, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) they cite sources

B) to cite sources

C) citing sources

D) citation of a source is done

772. *Medium — plural pronoun they*
When the jurors leave the room, _____ may not discuss the case.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) you

B) it

C) they

D) he or she

773. *Medium — singular subject, singular verb*
Each of the paintings _____ photographed last week.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) were

B) was

C) are

D) have been

774. *Hard — verb agrees with the nearer subject*
At noon, neither the flutes nor the violin _____ ready for the downbeat.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) are

B) were

C) been

D) was

775. *Easy — its, not it's*
The museum expanded _____ hours on Sundays.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) its

B) their

C) theirs

D) it's

776. *Easy — simple past after a past marker*
Yesterday the storm knocked out the power and _____ several roads.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) will flood

B) has flooded

C) flooded

D) floods

777. *Medium — compound subject joined by and*
Last week the author and the editor _____ the disputed date.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) checked

B) has checked

C) will check

D) checks

778. *Medium — modifier next to the right noun*
_____, the baker reduced the oven temperature.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Left to rise for an hour

B) Watching the crust darken

C) Mixed with cold butter

D) Scored across the top

779. *Hard — parallel structure*
We can store the prints, lend them to the school, or _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) to archive them

B) archiving them

C) they are archived

D) archive them

780. *Medium — plural pronoun they*
Once the cooks taste the soup, _____ can adjust the salt.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) they

B) it

C) you

D) one

781. *Medium — singular subject, singular verb*
In 1920 the row of houses _____ painted the same color.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) have been

B) was

C) were

D) are

782. *Hard — verb agrees with the nearer subject*
Last spring, neither the oak nor the elms _____ pruned.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) were

B) was

C) is

D) are

783. *Easy — its, not it's*
The engine lost _____ power on the hill.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) its

B) theirs

C) it's

D) their

784. *Easy — simple past after a past marker*
In 1901 the inventor tested the device and _____ a patent.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) filed

B) has filed

C) will file

D) files

785. *Medium — compound subject joined by and*
Yesterday the drummer and the pianist _____ before the doors opened.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) has rehearsed

B) will rehearse

C) rehearsed

D) rehearses

786. *Medium — modifier next to the right noun*
_____, the pilot requested a new altitude.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Noticing ice on the wing

B) Printed on the flight plan

C) Cleared by the tower

D) Filed before departure

787. *Hard — parallel structure*
The speech should open with the question, present the evidence, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ending with the recommendation

B) it ended with the recommendation

C) to end with the recommendation

D) end with the recommendation

788. *Medium — plural pronoun they*
If the neighbors hear the alarm, _____ should call the office.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) it

B) you

C) they

D) he

789. *Medium — singular subject, singular verb*
One of the gears _____ still missing from the box.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) have been

B) is

C) were

D) are

790. *Hard — verb agrees with the nearer subject*
Last spring, neither the elms nor the oak _____ marked on the map.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) have been

B) was

C) are

D) were

791. *Easy — its, not it's*
The newspaper corrected _____ headline the next day.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) theirs

B) their

C) it's

D) its

792. *Easy — simple past after a past marker*
Last winter the pipes froze and _____ before the plumber arrived.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) has burst

B) bursts

C) will burst

D) burst

793. *Medium — modifier next to the right noun*
_____, the librarian set the fragile book on a cushion.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Missing its title page

B) Removing it from the case

C) Printed in 1780

D) Cataloged under poetry

794. *Medium — singular subject, singular verb*
The stack of reports _____ grown taller this month.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) are

B) have

C) is

D) has

795. *Hard — verb agrees with the nearer subject*
Today, either the chart or the photographs _____ needed in the meeting.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) was

B) are

C) has been

D) is

796. *Easy — its, not it's*
The tree shed _____ leaves earlier than usual.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) its

B) their

C) it's

D) theirs

797. *Easy — simple past after a past marker*
In 2016 the school adopted the policy and _____ it to every family.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) will send

B) sent

C) sends

D) has sent

798. *Medium — modifier next to the right noun*
_____, the coach called a timeout.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) Drawn up during halftime

B) Seeing the players lose their positions

C) Posted on the locker-room wall

D) Used in last week's game

799. *Medium — singular subject, singular verb*
Every specimen in the drawers _____ checked twice.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) were

B) are

C) was

D) have been

800. *Hard — verb agrees with the nearer subject*
Today, either the photographs or the chart _____ sufficient for the briefing.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) have been

B) are

C) were

D) is

Expression of Ideas: Rhetorical Synthesis

801. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: kelp forests along the California coast.
- Researcher: Dr. Elena Voss.
- Result reported: juvenile counts were higher in standing kelp than on bare rock.
- Caution the researcher notes: the divers did not count adult rockfish.
- A later observation: After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

B) Dr. Elena Voss studies kelp forests along the California coast.

C) Voss cautions that the divers did not count adult rockfish.

D) Dr. Elena Voss studies kelp forests along the California coast and reports that juvenile counts were higher in standing kelp than on bare rock.

802. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: kelp forests along the California coast.
- Researcher: Dr. Elena Voss.
- Result reported: juvenile counts were higher in standing kelp than on bare rock.
- Caution the researcher notes: the divers did not count adult rockfish.
- A later observation: After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) After a storm stripped the kelp from one cove, the juvenile count in that cove fell, and Voss cautions that the divers did not count adult rockfish.

B) Voss reports that it was not the case that juvenile counts were higher in standing kelp than on bare rock.

C) Voss cautions that the divers did not count adult rockfish.

D) Voss reports that juvenile counts were higher in standing kelp than on bare rock.

803. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: kelp forests along the California coast.
- Researcher: Dr. Elena Voss.
- Result reported: juvenile counts were higher in standing kelp than on bare rock.
- Caution the researcher notes: the divers did not count adult rockfish.
- A later observation: After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Voss cautions that the divers did not count adult rockfish.

B) After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

C) Voss reports that juvenile counts were higher in standing kelp than on bare rock.

D) Voss reports that it was not the case that the divers did not count adult rockfish.

804. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: kelp forests along the California coast.
- Researcher: Dr. Elena Voss.
- Result reported: juvenile counts were higher in standing kelp than on bare rock.
- Caution the researcher notes: the divers did not count adult rockfish.
- A later observation: After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

B) Voss reports that juvenile counts were higher in standing kelp than on bare rock, which removes any need for caution about the finding.

C) Voss reports that juvenile counts were higher in standing kelp than on bare rock, but cautions that the divers did not count adult rockfish.

D) Voss reports that it was not the case that juvenile counts were higher in standing kelp than on bare rock.

805. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: kelp forests along the California coast.
- Researcher: Dr. Elena Voss.
- Result reported: juvenile counts were higher in standing kelp than on bare rock.
- Caution the researcher notes: the divers did not count adult rockfish.
- A later observation: After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

B) Voss reports that juvenile counts were higher in standing kelp than on bare rock.

C) Voss reports that juvenile counts were higher in standing kelp than on bare rock, whereas a later observation was that After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

D) Voss reports that juvenile counts were higher in standing kelp than on bare rock, but cautions that the divers did not count adult rockfish.

806. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: iron-gall ink on nineteenth-century letters.
- Researcher: Dr. Helen Cho.
- Result reported: the inked lines were often the places where the paper had cracked or fallen out.
- Caution the researcher notes: she did not test modern inks.
- A later observation: Letters written in pencil on the same desks showed no such holes.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Cho cautions that she did not test modern inks.

B) Dr. Helen Cho studies iron-gall ink on nineteenth-century letters.

C) Letters written in pencil on the same desks showed no such holes.

D) Dr. Helen Cho studies iron-gall ink on nineteenth-century letters and reports that the inked lines were often the places where the paper had cracked or fallen out.

807. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: bus trips on Center Avenue.
- Researcher: Dr. Luis Ortega.
- Result reported: afternoon bus trips were shorter after the lane opened than before it.
- Caution the researcher notes: the study did not survey riders' satisfaction.
- A later observation: The same buses were no faster at dawn, when the avenue was already empty.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The same buses were no faster at dawn, when the avenue was already empty, and Ortega cautions that the study did not survey riders' satisfaction.

B) Ortega cautions that the study did not survey riders' satisfaction.

C) Ortega reports that it was not the case that afternoon bus trips were shorter after the lane opened than before it.

D) Ortega reports that afternoon bus trips were shorter after the lane opened than before it.

808. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: afternoon pavement temperatures in one neighborhood.
- Researcher: Dr. Priya Raman.
- Result reported: pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- Caution the researcher notes: she did not measure temperatures inside houses.
- A later observation: After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

B) Raman reports that it was not the case that she did not measure temperatures inside houses.

C) Raman cautions that she did not measure temperatures inside houses.

D) After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

809. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: iron-gall ink on nineteenth-century letters.
- Researcher: Dr. Helen Cho.
- Result reported: the inked lines were often the places where the paper had cracked or fallen out.
- Caution the researcher notes: she did not test modern inks.
- A later observation: Letters written in pencil on the same desks showed no such holes.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Letters written in pencil on the same desks showed no such holes.

B) Cho reports that it was not the case that the inked lines were often the places where the paper had cracked or fallen out.

C) Cho reports that the inked lines were often the places where the paper had cracked or fallen out, but cautions that she did not test modern inks.

D) Cho reports that the inked lines were often the places where the paper had cracked or fallen out, which removes any need for caution about the finding.

810. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: afternoon pavement temperatures in one neighborhood.
- Researcher: Dr. Priya Raman.
- Result reported: pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- Caution the researcher notes: she did not measure temperatures inside houses.
- A later observation: After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks, whereas a later observation was that After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

B) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks, but cautions that she did not measure temperatures inside houses.

C) After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

D) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

811. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: bees in rooftop hives and in a suburban park.
- Researcher: Dr. Imani Cole.
- Result reported: the rooftop count was higher than the park count.
- Caution the researcher notes: one year cannot show whether the city is safer for bees over time.
- A later observation: The same rooftops had lower counts during a week of heavy smoke.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Imani Cole studies bees in rooftop hives and in a suburban park and reports that the rooftop count was higher than the park count.

B) Cole cautions that one year cannot show whether the city is safer for bees over time.

C) The same rooftops had lower counts during a week of heavy smoke.

D) Dr. Imani Cole studies bees in rooftop hives and in a suburban park.

812. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: algae on a melting glacier.
- Researcher: Dr. Andrei Sokolov.
- Result reported: plots with more algae lost more ice that week than plots with less algae.
- Caution the researcher notes: the team did not compare air temperatures above the plots.
- A later observation: When the algae was washed off one plot, that plot's melt slowed.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Sokolov reports that it was not the case that plots with more algae lost more ice that week than plots with less algae.

B) Sokolov cautions that the team did not compare air temperatures above the plots.

C) Sokolov reports that plots with more algae lost more ice that week than plots with less algae.

D) When the algae was washed off one plot, that plot's melt slowed, and Sokolov cautions that the team did not compare air temperatures above the plots.

813. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: iron-gall ink on nineteenth-century letters.
- Researcher: Dr. Helen Cho.
- Result reported: the inked lines were often the places where the paper had cracked or fallen out.
- Caution the researcher notes: she did not test modern inks.
- A later observation: Letters written in pencil on the same desks showed no such holes.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Letters written in pencil on the same desks showed no such holes.

B) Cho reports that the inked lines were often the places where the paper had cracked or fallen out.

C) Cho reports that it was not the case that she did not test modern inks.

D) Cho cautions that she did not test modern inks.

814. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: bees in rooftop hives and in a suburban park.
- Researcher: Dr. Imani Cole.
- Result reported: the rooftop count was higher than the park count.
- Caution the researcher notes: one year cannot show whether the city is safer for bees over time.
- A later observation: The same rooftops had lower counts during a week of heavy smoke.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The same rooftops had lower counts during a week of heavy smoke.

B) Cole reports that the rooftop count was higher than the park count, which removes any need for caution about the finding.

C) Cole reports that it was not the case that the rooftop count was higher than the park count.

D) Cole reports that the rooftop count was higher than the park count, but cautions that one year cannot show whether the city is safer for bees over time.

815. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: iron-gall ink on nineteenth-century letters.
- Researcher: Dr. Helen Cho.
- Result reported: the inked lines were often the places where the paper had cracked or fallen out.
- Caution the researcher notes: she did not test modern inks.
- A later observation: Letters written in pencil on the same desks showed no such holes.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Cho reports that the inked lines were often the places where the paper had cracked or fallen out.

B) Cho reports that the inked lines were often the places where the paper had cracked or fallen out, whereas a later observation was that Letters written in pencil on the same desks showed no such holes.

C) Cho reports that the inked lines were often the places where the paper had cracked or fallen out, but cautions that she did not test modern inks.

D) Letters written in pencil on the same desks showed no such holes.

816. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: algae on a melting glacier.
- Researcher: Dr. Andrei Sokolov.
- Result reported: plots with more algae lost more ice that week than plots with less algae.
- Caution the researcher notes: the team did not compare air temperatures above the plots.
- A later observation: When the algae was washed off one plot, that plot's melt slowed.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Andrei Sokolov studies algae on a melting glacier.

B) When the algae was washed off one plot, that plot's melt slowed.

C) Dr. Andrei Sokolov studies algae on a melting glacier and reports that plots with more algae lost more ice that week than plots with less algae.

D) Sokolov cautions that the team did not compare air temperatures above the plots.

817. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: a high school that moved its start time later.
- Researcher: Dr. Joan Ekstrom.
- Result reported: first-period absences fell in the semester after the change.
- Caution the researcher notes: she did not measure how long students actually slept.
- A later observation: Absences in the last period of the day did not fall.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ekstrom reports that it was not the case that first-period absences fell in the semester after the change.

B) Ekstrom cautions that she did not measure how long students actually slept.

C) Ekstrom reports that first-period absences fell in the semester after the change.

D) Absences in the last period of the day did not fall, and Ekstrom cautions that she did not measure how long students actually slept.

818. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: bus trips on Center Avenue.
- Researcher: Dr. Luis Ortega.
- Result reported: afternoon bus trips were shorter after the lane opened than before it.
- Caution the researcher notes: the study did not survey riders' satisfaction.
- A later observation: The same buses were no faster at dawn, when the avenue was already empty.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The same buses were no faster at dawn, when the avenue was already empty.

B) Ortega reports that afternoon bus trips were shorter after the lane opened than before it.

C) Ortega reports that it was not the case that the study did not survey riders' satisfaction.

D) Ortega cautions that the study did not survey riders' satisfaction.

819. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: algae on a melting glacier.
- Researcher: Dr. Andrei Sokolov.
- Result reported: plots with more algae lost more ice that week than plots with less algae.
- Caution the researcher notes: the team did not compare air temperatures above the plots.
- A later observation: When the algae was washed off one plot, that plot's melt slowed.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Sokolov reports that plots with more algae lost more ice that week than plots with less algae, but cautions that the team did not compare air temperatures above the plots.

B) Sokolov reports that it was not the case that plots with more algae lost more ice that week than plots with less algae.

C) Sokolov reports that plots with more algae lost more ice that week than plots with less algae, which removes any need for caution about the finding.

D) When the algae was washed off one plot, that plot's melt slowed.

820. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: bus trips on Center Avenue.
- Researcher: Dr. Luis Ortega.
- Result reported: afternoon bus trips were shorter after the lane opened than before it.
- Caution the researcher notes: the study did not survey riders' satisfaction.
- A later observation: The same buses were no faster at dawn, when the avenue was already empty.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ortega reports that afternoon bus trips were shorter after the lane opened than before it.

B) Ortega reports that afternoon bus trips were shorter after the lane opened than before it, but cautions that the study did not survey riders' satisfaction.

C) The same buses were no faster at dawn, when the avenue was already empty.

D) Ortega reports that afternoon bus trips were shorter after the lane opened than before it, whereas a later observation was that The same buses were no faster at dawn, when the avenue was already empty.

821. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: clay pots from a riverside workshop.
- Researcher: Dr. Marco Bell.
- Result reported: fewer shell-tempered pots cracked than sand-tempered pots.
- Caution the researcher notes: he did not test whether the pots survived later use over a fire.
- A later observation: Pots with no temper at all cracked most often.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Bell cautions that he did not test whether the pots survived later use over a fire.

B) Dr. Marco Bell studies clay pots from a riverside workshop and reports that fewer shell-tempered pots cracked than sand-tempered pots.

C) Dr. Marco Bell studies clay pots from a riverside workshop.

D) Pots with no temper at all cracked most often.

822. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: small loans to market vendors.
- Researcher: Dr. Fatima Noor.
- Result reported: a larger share of the loan group was still trading after six months.
- Caution the researcher notes: the study does not show that every loan was spent on the business.
- A later observation: The gap was smaller among vendors who already had a stall of their own.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The gap was smaller among vendors who already had a stall of their own, and Noor cautions that the study does not show that every loan was spent on the business.

B) Noor reports that it was not the case that a larger share of the loan group was still trading after six months.

C) Noor cautions that the study does not show that every loan was spent on the business.

D) Noor reports that a larger share of the loan group was still trading after six months.

823. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: bees in rooftop hives and in a suburban park.
- Researcher: Dr. Imani Cole.
- Result reported: the rooftop count was higher than the park count.
- Caution the researcher notes: one year cannot show whether the city is safer for bees over time.
- A later observation: The same rooftops had lower counts during a week of heavy smoke.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Cole reports that the rooftop count was higher than the park count.

B) Cole cautions that one year cannot show whether the city is safer for bees over time.

C) Cole reports that it was not the case that one year cannot show whether the city is safer for bees over time.

D) The same rooftops had lower counts during a week of heavy smoke.

824. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: clay pots from a riverside workshop.
- Researcher: Dr. Marco Bell.
- Result reported: fewer shell-tempered pots cracked than sand-tempered pots.
- Caution the researcher notes: he did not test whether the pots survived later use over a fire.
- A later observation: Pots with no temper at all cracked most often.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Bell reports that it was not the case that fewer shell-tempered pots cracked than sand-tempered pots.

B) Bell reports that fewer shell-tempered pots cracked than sand-tempered pots, but cautions that he did not test whether the pots survived later use over a fire.

C) Pots with no temper at all cracked most often.

D) Bell reports that fewer shell-tempered pots cracked than sand-tempered pots, which removes any need for caution about the finding.

825. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: bees in rooftop hives and in a suburban park.
- Researcher: Dr. Imani Cole.
- Result reported: the rooftop count was higher than the park count.
- Caution the researcher notes: one year cannot show whether the city is safer for bees over time.
- A later observation: The same rooftops had lower counts during a week of heavy smoke.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Cole reports that the rooftop count was higher than the park count, whereas a later observation was that The same rooftops had lower counts during a week of heavy smoke.

B) Cole reports that the rooftop count was higher than the park count.

C) Cole reports that the rooftop count was higher than the park count, but cautions that one year cannot show whether the city is safer for bees over time.

D) The same rooftops had lower counts during a week of heavy smoke.

826. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: a reef after a heat wave.
- Researcher: Dr. Nora Feldman.
- Result reported: colonies that kept their algae stayed darker than colonies that expelled them.
- Caution the researcher notes: the divers did not measure fish counts on the reef.
- A later observation: The following cool month, some pale colonies regained color as algae returned.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The following cool month, some pale colonies regained color as algae returned.

B) Feldman cautions that the divers did not measure fish counts on the reef.

C) Dr. Nora Feldman studies a reef after a heat wave and reports that colonies that kept their algae stayed darker than colonies that expelled them.

D) Dr. Nora Feldman studies a reef after a heat wave.

827. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: county health reports from 1957.
- Researcher: Dr. Edith Lang.
- Result reported: the count of new cases was lower in the summer after the clinics.
- Caution the researcher notes: a drop in one county's report does not by itself prove the clinics caused it.
- A later observation: A neighboring county that held no clinics did not show a similar drop.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Lang cautions that a drop in one county's report does not by itself prove the clinics caused it.

B) A neighboring county that held no clinics did not show a similar drop, and Lang cautions that a drop in one county's report does not by itself prove the clinics caused it.

C) Lang reports that it was not the case that the count of new cases was lower in the summer after the clinics.

D) Lang reports that the count of new cases was lower in the summer after the clinics.

828. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: turnout in a local election.
- Researcher: Dr. Nina Patel.
- Result reported: turnout was higher in the precincts that received the postcard.
- Caution the researcher notes: the study cannot show that every recipient read the card.
- A later observation: The gap was larger in precincts that had low turnout the year before.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The gap was larger in precincts that had low turnout the year before.

B) Patel reports that turnout was higher in the precincts that received the postcard.

C) Patel reports that it was not the case that the study cannot show that every recipient read the card.

D) Patel cautions that the study cannot show that every recipient read the card.

829. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: a reef after a heat wave.
- Researcher: Dr. Nora Feldman.
- Result reported: colonies that kept their algae stayed darker than colonies that expelled them.
- Caution the researcher notes: the divers did not measure fish counts on the reef.
- A later observation: The following cool month, some pale colonies regained color as algae returned.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them, which removes any need for caution about the finding.

B) The following cool month, some pale colonies regained color as algae returned.

C) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them, but cautions that the divers did not measure fish counts on the reef.

D) Feldman reports that it was not the case that colonies that kept their algae stayed darker than colonies that expelled them.

830. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: turnout in a local election.
- Researcher: Dr. Nina Patel.
- Result reported: turnout was higher in the precincts that received the postcard.
- Caution the researcher notes: the study cannot show that every recipient read the card.
- A later observation: The gap was larger in precincts that had low turnout the year before.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Patel reports that turnout was higher in the precincts that received the postcard.

B) The gap was larger in precincts that had low turnout the year before.

C) Patel reports that turnout was higher in the precincts that received the postcard, but cautions that the study cannot show that every recipient read the card.

D) Patel reports that turnout was higher in the precincts that received the postcard, whereas a later observation was that The gap was larger in precincts that had low turnout the year before.

831. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: small loans to market vendors.
- Researcher: Dr. Fatima Noor.
- Result reported: a larger share of the loan group was still trading after six months.
- Caution the researcher notes: the study does not show that every loan was spent on the business.
- A later observation: The gap was smaller among vendors who already had a stall of their own.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The gap was smaller among vendors who already had a stall of their own.

B) Dr. Fatima Noor studies small loans to market vendors and reports that a larger share of the loan group was still trading after six months.

C) Noor cautions that the study does not show that every loan was spent on the business.

D) Dr. Fatima Noor studies small loans to market vendors.

832. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: a restored wetland beside a river.
- Researcher: Dr. Leo Martins.
- Result reported: the wetland depth rose while the road remained dry.
- Caution the researcher notes: the gauges were not left in place over the winter.
- A later observation: In a larger storm the wetland filled and the road flooded anyway.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Martins reports that it was not the case that the wetland depth rose while the road remained dry.

B) In a larger storm the wetland filled and the road flooded anyway, and Martins cautions that the gauges were not left in place over the winter.

C) Martins cautions that the gauges were not left in place over the winter.

D) Martins reports that the wetland depth rose while the road remained dry.

833. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: algae on a melting glacier.
- Researcher: Dr. Andrei Sokolov.
- Result reported: plots with more algae lost more ice that week than plots with less algae.
- Caution the researcher notes: the team did not compare air temperatures above the plots.
- A later observation: When the algae was washed off one plot, that plot's melt slowed.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) When the algae was washed off one plot, that plot's melt slowed.

B) Sokolov cautions that the team did not compare air temperatures above the plots.

C) Sokolov reports that it was not the case that the team did not compare air temperatures above the plots.

D) Sokolov reports that plots with more algae lost more ice that week than plots with less algae.

834. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: small loans to market vendors.
- Researcher: Dr. Fatima Noor.
- Result reported: a larger share of the loan group was still trading after six months.
- Caution the researcher notes: the study does not show that every loan was spent on the business.
- A later observation: The gap was smaller among vendors who already had a stall of their own.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Noor reports that a larger share of the loan group was still trading after six months, but cautions that the study does not show that every loan was spent on the business.

B) The gap was smaller among vendors who already had a stall of their own.

C) Noor reports that it was not the case that a larger share of the loan group was still trading after six months.

D) Noor reports that a larger share of the loan group was still trading after six months, which removes any need for caution about the finding.

835. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: algae on a melting glacier.
- Researcher: Dr. Andrei Sokolov.
- Result reported: plots with more algae lost more ice that week than plots with less algae.
- Caution the researcher notes: the team did not compare air temperatures above the plots.
- A later observation: When the algae was washed off one plot, that plot's melt slowed.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) When the algae was washed off one plot, that plot's melt slowed.

B) Sokolov reports that plots with more algae lost more ice that week than plots with less algae, whereas a later observation was that When the algae was washed off one plot, that plot's melt slowed.

C) Sokolov reports that plots with more algae lost more ice that week than plots with less algae, but cautions that the team did not compare air temperatures above the plots.

D) Sokolov reports that plots with more algae lost more ice that week than plots with less algae.

836. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: rehearsal notes for a 1936 production.
- Researcher: Dr. Alice Peng.
- Result reported: the cut scene was the one marked 'too long' in the director's hand.
- Caution the researcher notes: the notes do not say whether audiences liked the shorter version.
- A later observation: A later revival restored the scene and ran past two hours.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Alice Peng studies rehearsal notes for a 1936 production and reports that the cut scene was the one marked 'too long' in the director's hand.

B) Peng cautions that the notes do not say whether audiences liked the shorter version.

C) Dr. Alice Peng studies rehearsal notes for a 1936 production.

D) A later revival restored the scene and ran past two hours.

837. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: steel bridges in hot weather.
- Researcher: Dr. Miguel Santos.
- Result reported: the gaps at the joints were narrower in the afternoon than at dawn.
- Caution the researcher notes: the crews did not measure traffic weight.
- A later observation: On a cool cloudy day the afternoon gaps barely changed.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Santos cautions that the crews did not measure traffic weight.

B) On a cool cloudy day the afternoon gaps barely changed, and Santos cautions that the crews did not measure traffic weight.

C) Santos reports that it was not the case that the gaps at the joints were narrower in the afternoon than at dawn.

D) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn.

838. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: students who switch languages during class discussion.
- Researcher: Dr. Grace Adeyemi.
- Result reported: summaries from students who had switched languages scored as high as summaries from students who had not.
- Caution the researcher notes: the study did not score spoken answers on the exam.
- A later observation: Teachers who had expected confusion found the written work orderly.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Adeyemi reports that it was not the case that the study did not score spoken answers on the exam.

B) Teachers who had expected confusion found the written work orderly.

C) Adeyemi reports that summaries from students who had switched languages scored as high as summaries from students who had not.

D) Adeyemi cautions that the study did not score spoken answers on the exam.

839. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: rehearsal notes for a 1936 production.
- Researcher: Dr. Alice Peng.
- Result reported: the cut scene was the one marked 'too long' in the director's hand.
- Caution the researcher notes: the notes do not say whether audiences liked the shorter version.
- A later observation: A later revival restored the scene and ran past two hours.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Peng reports that it was not the case that the cut scene was the one marked 'too long' in the director's hand.

B) A later revival restored the scene and ran past two hours.

C) Peng reports that the cut scene was the one marked 'too long' in the director's hand, but cautions that the notes do not say whether audiences liked the shorter version.

D) Peng reports that the cut scene was the one marked 'too long' in the director's hand, which removes any need for caution about the finding.

840. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: students who switch languages during class discussion.
- Researcher: Dr. Grace Adeyemi.
- Result reported: summaries from students who had switched languages scored as high as summaries from students who had not.
- Caution the researcher notes: the study did not score spoken answers on the exam.
- A later observation: Teachers who had expected confusion found the written work orderly.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Adeyemi reports that summaries from students who had switched languages scored as high as summaries from students who had not, whereas a later observation was that Teachers who had expected confusion found the written work orderly.

B) Adeyemi reports that summaries from students who had switched languages scored as high as summaries from students who had not.

C) Adeyemi reports that summaries from students who had switched languages scored as high as summaries from students who had not, but cautions that the study did not score spoken answers on the exam.

D) Teachers who had expected confusion found the written work orderly.

841. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: willows in a valley where wolves had returned.
- Researcher: Dr. Rosa Nguyen.
- Result reported: banks with fewer signs of browsing had taller willow seedlings.
- Caution the researcher notes: she did not measure bird nests in the willows.
- A later observation: A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Rosa Nguyen studies willows in a valley where wolves had returned and reports that banks with fewer signs of browsing had taller willow seedlings.

B) Dr. Rosa Nguyen studies willows in a valley where wolves had returned.

C) A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

D) Nguyen cautions that she did not measure bird nests in the willows.

842. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: a city that stopped charging library overdue fines.
- Researcher: Dr. Karen Ito.
- Result reported: returns of overdue books rose after fines ended.
- Caution the researcher notes: other changes, including longer open hours, happened in the same months.
- A later observation: New checkouts also rose, so the library was busier overall.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) New checkouts also rose, so the library was busier overall, and Ito cautions that other changes, including longer open hours, happened in the same months.

B) Ito cautions that other changes, including longer open hours, happened in the same months.

C) Ito reports that returns of overdue books rose after fines ended.

D) Ito reports that it was not the case that returns of overdue books rose after fines ended.

843. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: clay pots from a riverside workshop.
- Researcher: Dr. Marco Bell.
- Result reported: fewer shell-tempered pots cracked than sand-tempered pots.
- Caution the researcher notes: he did not test whether the pots survived later use over a fire.
- A later observation: Pots with no temper at all cracked most often.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Bell cautions that he did not test whether the pots survived later use over a fire.

B) Bell reports that it was not the case that he did not test whether the pots survived later use over a fire.

C) Bell reports that fewer shell-tempered pots cracked than sand-tempered pots.

D) Pots with no temper at all cracked most often.

844. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: willows in a valley where wolves had returned.
- Researcher: Dr. Rosa Nguyen.
- Result reported: banks with fewer signs of browsing had taller willow seedlings.
- Caution the researcher notes: she did not measure bird nests in the willows.
- A later observation: A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings, which removes any need for caution about the finding.

B) A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

C) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings, but cautions that she did not measure bird nests in the willows.

D) Nguyen reports that it was not the case that banks with fewer signs of browsing had taller willow seedlings.

845. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: clay pots from a riverside workshop.
- Researcher: Dr. Marco Bell.
- Result reported: fewer shell-tempered pots cracked than sand-tempered pots.
- Caution the researcher notes: he did not test whether the pots survived later use over a fire.
- A later observation: Pots with no temper at all cracked most often.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Bell reports that fewer shell-tempered pots cracked than sand-tempered pots, whereas a later observation was that Pots with no temper at all cracked most often.

B) Bell reports that fewer shell-tempered pots cracked than sand-tempered pots.

C) Pots with no temper at all cracked most often.

D) Bell reports that fewer shell-tempered pots cracked than sand-tempered pots, but cautions that he did not test whether the pots survived later use over a fire.

846. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: a restored wetland beside a river.
- Researcher: Dr. Leo Martins.
- Result reported: the wetland depth rose while the road remained dry.
- Caution the researcher notes: the gauges were not left in place over the winter.
- A later observation: In a larger storm the wetland filled and the road flooded anyway.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Martins cautions that the gauges were not left in place over the winter.

B) Dr. Leo Martins studies a restored wetland beside a river and reports that the wetland depth rose while the road remained dry.

C) In a larger storm the wetland filled and the road flooded anyway.

D) Dr. Leo Martins studies a restored wetland beside a river.

847. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: two oral versions of a star story.
- Researcher: Dr. Naomi Feldman.
- Result reported: the named stars match, and the plots of the stories do not.
- Caution the researcher notes: she did not claim that one story is older than the other.
- A later observation: A third community farther inland does not tell a story about that group at all.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Feldman reports that it was not the case that the named stars match, and the plots of the stories do not.

B) Feldman reports that the named stars match, and the plots of the stories do not.

C) Feldman cautions that she did not claim that one story is older than the other.

D) A third community farther inland does not tell a story about that group at all, and Feldman cautions that she did not claim that one story is older than the other.

848. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: a high school that moved its start time later.
- Researcher: Dr. Joan Ekstrom.
- Result reported: first-period absences fell in the semester after the change.
- Caution the researcher notes: she did not measure how long students actually slept.
- A later observation: Absences in the last period of the day did not fall.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ekstrom cautions that she did not measure how long students actually slept.

B) Ekstrom reports that it was not the case that she did not measure how long students actually slept.

C) Ekstrom reports that first-period absences fell in the semester after the change.

D) Absences in the last period of the day did not fall.

849. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: a restored wetland beside a river.
- Researcher: Dr. Leo Martins.
- Result reported: the wetland depth rose while the road remained dry.
- Caution the researcher notes: the gauges were not left in place over the winter.
- A later observation: In a larger storm the wetland filled and the road flooded anyway.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Martins reports that the wetland depth rose while the road remained dry, but cautions that the gauges were not left in place over the winter.

B) In a larger storm the wetland filled and the road flooded anyway.

C) Martins reports that it was not the case that the wetland depth rose while the road remained dry.

D) Martins reports that the wetland depth rose while the road remained dry, which removes any need for caution about the finding.

850. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: a high school that moved its start time later.
- Researcher: Dr. Joan Ekstrom.
- Result reported: first-period absences fell in the semester after the change.
- Caution the researcher notes: she did not measure how long students actually slept.
- A later observation: Absences in the last period of the day did not fall.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ekstrom reports that first-period absences fell in the semester after the change.

B) Ekstrom reports that first-period absences fell in the semester after the change, whereas a later observation was that Absences in the last period of the day did not fall.

C) Absences in the last period of the day did not fall.

D) Ekstrom reports that first-period absences fell in the semester after the change, but cautions that she did not measure how long students actually slept.

851. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: passive voice in lab reports.
- Researcher: Dr. Sophie Bernard.
- Result reported: readers rated the passive versions as more certain.
- Caution the researcher notes: she did not test whether scientists themselves prefer one voice.
- A later observation: When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

B) Dr. Sophie Bernard studies passive voice in lab reports and reports that readers rated the passive versions as more certain.

C) Bernard cautions that she did not test whether scientists themselves prefer one voice.

D) Dr. Sophie Bernard studies passive voice in lab reports.

852. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: seedlings grown with soil fungi.
- Researcher: Dr. Paolo Ricci.
- Result reported: the fungi group weighed more at eight weeks.
- Caution the researcher notes: he did not measure the seedlings' survival through winter.
- A later observation: When he sterilized the soil after four weeks, the weight gap stopped growing.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ricci reports that it was not the case that the fungi group weighed more at eight weeks.

B) Ricci cautions that he did not measure the seedlings' survival through winter.

C) Ricci reports that the fungi group weighed more at eight weeks.

D) When he sterilized the soil after four weeks, the weight gap stopped growing, and Ricci cautions that he did not measure the seedlings' survival through winter.

853. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: a reef after a heat wave.
- Researcher: Dr. Nora Feldman.
- Result reported: colonies that kept their algae stayed darker than colonies that expelled them.
- Caution the researcher notes: the divers did not measure fish counts on the reef.
- A later observation: The following cool month, some pale colonies regained color as algae returned.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The following cool month, some pale colonies regained color as algae returned.

B) Feldman cautions that the divers did not measure fish counts on the reef.

C) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them.

D) Feldman reports that it was not the case that the divers did not measure fish counts on the reef.

854. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: passive voice in lab reports.
- Researcher: Dr. Sophie Bernard.
- Result reported: readers rated the passive versions as more certain.
- Caution the researcher notes: she did not test whether scientists themselves prefer one voice.
- A later observation: When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Bernard reports that readers rated the passive versions as more certain, which removes any need for caution about the finding.

B) When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

C) Bernard reports that readers rated the passive versions as more certain, but cautions that she did not test whether scientists themselves prefer one voice.

D) Bernard reports that it was not the case that readers rated the passive versions as more certain.

855. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: a reef after a heat wave.
- Researcher: Dr. Nora Feldman.
- Result reported: colonies that kept their algae stayed darker than colonies that expelled them.
- Caution the researcher notes: the divers did not measure fish counts on the reef.
- A later observation: The following cool month, some pale colonies regained color as algae returned.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them, whereas a later observation was that The following cool month, some pale colonies regained color as algae returned.

B) The following cool month, some pale colonies regained color as algae returned.

C) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them, but cautions that the divers did not measure fish counts on the reef.

D) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them.

856. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: murals painted for public buildings in the 1930s.
- Researcher: Dr. June Harlow.
- Result reported: the sketches show occupations named in the contracts, such as harvesting and mill work.
- Caution the researcher notes: she did not interview anyone who watched the murals being painted.
- A later observation: A mural whose contract has been lost shows a similar harvest scene.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Harlow cautions that she did not interview anyone who watched the murals being painted.

B) Dr. June Harlow studies murals painted for public buildings in the 1930s and reports that the sketches show occupations named in the contracts, such as harvesting and mill work.

C) A mural whose contract has been lost shows a similar harvest scene.

D) Dr. June Harlow studies murals painted for public buildings in the 1930s.

857. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: pigment on an outdoor fresco.
- Researcher: Dr. Irene Solano.
- Result reported: the sunny red sections had lightened more than the sunny earth-colored sections.
- Caution the researcher notes: she did not remove any pigment for a laboratory test.
- A later observation: A shaded red section had barely lightened.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Solano reports that it was not the case that the sunny red sections had lightened more than the sunny earth-colored sections.

B) Solano cautions that she did not remove any pigment for a laboratory test.

C) Solano reports that the sunny red sections had lightened more than the sunny earth-colored sections.

D) A shaded red section had barely lightened, and Solano cautions that she did not remove any pigment for a laboratory test.

858. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: wax-cylinder recordings from the 1890s.
- Researcher: Dr. Ruth Adelman.
- Result reported: more words were intelligible on the cool-room cylinders than on the attic cylinders.
- Caution the researcher notes: she did not compare cylinders of music with cylinders of speech.
- A later observation: A cylinder moved from an attic to a cool room did not regain the words already lost.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Adelman reports that it was not the case that she did not compare cylinders of music with cylinders of speech.

B) Adelman cautions that she did not compare cylinders of music with cylinders of speech.

C) Adelman reports that more words were intelligible on the cool-room cylinders than on the attic cylinders.

D) A cylinder moved from an attic to a cool room did not regain the words already lost.

859. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: murals painted for public buildings in the 1930s.
- Researcher: Dr. June Harlow.
- Result reported: the sketches show occupations named in the contracts, such as harvesting and mill work.
- Caution the researcher notes: she did not interview anyone who watched the murals being painted.
- A later observation: A mural whose contract has been lost shows a similar harvest scene.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Harlow reports that the sketches show occupations named in the contracts, such as harvesting and mill work, which removes any need for caution about the finding.

B) A mural whose contract has been lost shows a similar harvest scene.

C) Harlow reports that the sketches show occupations named in the contracts, such as harvesting and mill work, but cautions that she did not interview anyone who watched the murals being painted.

D) Harlow reports that it was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.

860. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: wax-cylinder recordings from the 1890s.
- Researcher: Dr. Ruth Adelman.
- Result reported: more words were intelligible on the cool-room cylinders than on the attic cylinders.
- Caution the researcher notes: she did not compare cylinders of music with cylinders of speech.
- A later observation: A cylinder moved from an attic to a cool room did not regain the words already lost.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Adelman reports that more words were intelligible on the cool-room cylinders than on the attic cylinders, but cautions that she did not compare cylinders of music with cylinders of speech.

B) A cylinder moved from an attic to a cool room did not regain the words already lost.

C) Adelman reports that more words were intelligible on the cool-room cylinders than on the attic cylinders.

D) Adelman reports that more words were intelligible on the cool-room cylinders than on the attic cylinders, whereas a later observation was that A cylinder moved from an attic to a cool room did not regain the words already lost.

861. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: a city that stopped charging library overdue fines.
- Researcher: Dr. Karen Ito.
- Result reported: returns of overdue books rose after fines ended.
- Caution the researcher notes: other changes, including longer open hours, happened in the same months.
- A later observation: New checkouts also rose, so the library was busier overall.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Karen Ito studies a city that stopped charging library overdue fines.

B) Ito cautions that other changes, including longer open hours, happened in the same months.

C) Dr. Karen Ito studies a city that stopped charging library overdue fines and reports that returns of overdue books rose after fines ended.

D) New checkouts also rose, so the library was busier overall.

862. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: dust layers in an ice core.
- Researcher: Dr. Ellen Zhou.
- Result reported: the thickest dust layers fell in years the notes call dry.
- Caution the researcher notes: the core does not name the source of every grain of dust.
- A later observation: A thick layer also appears in a year the notes call wet and windy.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Zhou cautions that the core does not name the source of every grain of dust.

B) Zhou reports that it was not the case that the thickest dust layers fell in years the notes call dry.

C) A thick layer also appears in a year the notes call wet and windy, and Zhou cautions that the core does not name the source of every grain of dust.

D) Zhou reports that the thickest dust layers fell in years the notes call dry.

863. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: small loans to market vendors.
- Researcher: Dr. Fatima Noor.
- Result reported: a larger share of the loan group was still trading after six months.
- Caution the researcher notes: the study does not show that every loan was spent on the business.
- A later observation: The gap was smaller among vendors who already had a stall of their own.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The gap was smaller among vendors who already had a stall of their own.

B) Noor reports that a larger share of the loan group was still trading after six months.

C) Noor reports that it was not the case that the study does not show that every loan was spent on the business.

D) Noor cautions that the study does not show that every loan was spent on the business.

864. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: a city that stopped charging library overdue fines.
- Researcher: Dr. Karen Ito.
- Result reported: returns of overdue books rose after fines ended.
- Caution the researcher notes: other changes, including longer open hours, happened in the same months.
- A later observation: New checkouts also rose, so the library was busier overall.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ito reports that returns of overdue books rose after fines ended, which removes any need for caution about the finding.

B) Ito reports that it was not the case that returns of overdue books rose after fines ended.

C) Ito reports that returns of overdue books rose after fines ended, but cautions that other changes, including longer open hours, happened in the same months.

D) New checkouts also rose, so the library was busier overall.

865. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: small loans to market vendors.
- Researcher: Dr. Fatima Noor.
- Result reported: a larger share of the loan group was still trading after six months.
- Caution the researcher notes: the study does not show that every loan was spent on the business.
- A later observation: The gap was smaller among vendors who already had a stall of their own.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Noor reports that a larger share of the loan group was still trading after six months, whereas a later observation was that The gap was smaller among vendors who already had a stall of their own.

B) The gap was smaller among vendors who already had a stall of their own.

C) Noor reports that a larger share of the loan group was still trading after six months, but cautions that the study does not show that every loan was spent on the business.

D) Noor reports that a larger share of the loan group was still trading after six months.

866. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: a 1602 coastal chart.
- Researcher: Dr. Clara Mendes.
- Result reported: the bay drawn in 1602 sits east of the bay on the later survey.
- Caution the researcher notes: she did not claim the coastline itself had moved.
- A later observation: A note on the 1602 chart says the bay was sketched from a moving ship.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) A note on the 1602 chart says the bay was sketched from a moving ship.

B) Mendes cautions that she did not claim the coastline itself had moved.

C) Dr. Clara Mendes studies a 1602 coastal chart and reports that the bay drawn in 1602 sits east of the bay on the later survey.

D) Dr. Clara Mendes studies a 1602 coastal chart.

867. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: a reminder text and missed clinic appointments.
- Researcher: Dr. Rachel Stein.
- Result reported: the texting clinics had a lower miss rate.
- Caution the researcher notes: the comparison does not isolate the text from the new evening hour.
- A later observation: The texting clinics also added an evening hour in the same month.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Stein reports that it was not the case that the texting clinics had a lower miss rate.

B) Stein cautions that the comparison does not isolate the text from the new evening hour.

C) The texting clinics also added an evening hour in the same month, and Stein cautions that the comparison does not isolate the text from the new evening hour.

D) Stein reports that the texting clinics had a lower miss rate.

868. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: summer surface temperatures under city trees.
- Researcher: Dr. Camille Duval.
- Result reported: blocks with more canopy had cooler midday surfaces.
- Caution the researcher notes: the team did not measure winter temperatures.
- A later observation: A block that lost canopy to pruning warmed the next summer.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Duval cautions that the team did not measure winter temperatures.

B) Duval reports that it was not the case that the team did not measure winter temperatures.

C) A block that lost canopy to pruning warmed the next summer.

D) Duval reports that blocks with more canopy had cooler midday surfaces.

869. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: a 1602 coastal chart.
- Researcher: Dr. Clara Mendes.
- Result reported: the bay drawn in 1602 sits east of the bay on the later survey.
- Caution the researcher notes: she did not claim the coastline itself had moved.
- A later observation: A note on the 1602 chart says the bay was sketched from a moving ship.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) A note on the 1602 chart says the bay was sketched from a moving ship.

B) Mendes reports that the bay drawn in 1602 sits east of the bay on the later survey, but cautions that she did not claim the coastline itself had moved.

C) Mendes reports that the bay drawn in 1602 sits east of the bay on the later survey, which removes any need for caution about the finding.

D) Mendes reports that it was not the case that the bay drawn in 1602 sits east of the bay on the later survey.

870. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: summer surface temperatures under city trees.
- Researcher: Dr. Camille Duval.
- Result reported: blocks with more canopy had cooler midday surfaces.
- Caution the researcher notes: the team did not measure winter temperatures.
- A later observation: A block that lost canopy to pruning warmed the next summer.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) A block that lost canopy to pruning warmed the next summer.

B) Duval reports that blocks with more canopy had cooler midday surfaces, whereas a later observation was that A block that lost canopy to pruning warmed the next summer.

C) Duval reports that blocks with more canopy had cooler midday surfaces, but cautions that the team did not measure winter temperatures.

D) Duval reports that blocks with more canopy had cooler midday surfaces.

871. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: compost piles and weed seeds.
- Researcher: Dr. Yara Hassan.
- Result reported: fewer seeds sprouted from the hot center than from the cool edge.
- Caution the researcher notes: she did not test crop seeds that a gardener might want to survive.
- A later observation: Seeds held at the same high temperature in an oven also failed to sprout.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Yara Hassan studies compost piles and weed seeds and reports that fewer seeds sprouted from the hot center than from the cool edge.

B) Seeds held at the same high temperature in an oven also failed to sprout.

C) Hassan cautions that she did not test crop seeds that a gardener might want to survive.

D) Dr. Yara Hassan studies compost piles and weed seeds.

872. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: audience copies of a poem and library loans of the same book.
- Researcher: Dr. Angela Brooks.
- Result reported: the loan count was higher in the month after the reading than in the month before.
- Caution the researcher notes: the loan records do not show whether the borrowers attended the reading.
- A later observation: A second reading in another city was followed by a similar brief rise.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Brooks cautions that the loan records do not show whether the borrowers attended the reading.

B) Brooks reports that it was not the case that the loan count was higher in the month after the reading than in the month before.

C) Brooks reports that the loan count was higher in the month after the reading than in the month before.

D) A second reading in another city was followed by a similar brief rise, and Brooks cautions that the loan records do not show whether the borrowers attended the reading.

873. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: rehearsal notes for a 1936 production.
- Researcher: Dr. Alice Peng.
- Result reported: the cut scene was the one marked 'too long' in the director's hand.
- Caution the researcher notes: the notes do not say whether audiences liked the shorter version.
- A later observation: A later revival restored the scene and ran past two hours.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Peng reports that it was not the case that the notes do not say whether audiences liked the shorter version.

B) A later revival restored the scene and ran past two hours.

C) Peng cautions that the notes do not say whether audiences liked the shorter version.

D) Peng reports that the cut scene was the one marked 'too long' in the director's hand.

874. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: compost piles and weed seeds.
- Researcher: Dr. Yara Hassan.
- Result reported: fewer seeds sprouted from the hot center than from the cool edge.
- Caution the researcher notes: she did not test crop seeds that a gardener might want to survive.
- A later observation: Seeds held at the same high temperature in an oven also failed to sprout.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Hassan reports that fewer seeds sprouted from the hot center than from the cool edge, which removes any need for caution about the finding.

B) Seeds held at the same high temperature in an oven also failed to sprout.

C) Hassan reports that it was not the case that fewer seeds sprouted from the hot center than from the cool edge.

D) Hassan reports that fewer seeds sprouted from the hot center than from the cool edge, but cautions that she did not test crop seeds that a gardener might want to survive.

875. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: rehearsal notes for a 1936 production.
- Researcher: Dr. Alice Peng.
- Result reported: the cut scene was the one marked 'too long' in the director's hand.
- Caution the researcher notes: the notes do not say whether audiences liked the shorter version.
- A later observation: A later revival restored the scene and ran past two hours.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Peng reports that the cut scene was the one marked 'too long' in the director's hand.

B) A later revival restored the scene and ran past two hours.

C) Peng reports that the cut scene was the one marked 'too long' in the director's hand, whereas a later observation was that A later revival restored the scene and ran past two hours.

D) Peng reports that the cut scene was the one marked 'too long' in the director's hand, but cautions that the notes do not say whether audiences liked the shorter version.

876. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: seedlings grown with soil fungi.
- Researcher: Dr. Paolo Ricci.
- Result reported: the fungi group weighed more at eight weeks.
- Caution the researcher notes: he did not measure the seedlings' survival through winter.
- A later observation: When he sterilized the soil after four weeks, the weight gap stopped growing.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Paolo Ricci studies seedlings grown with soil fungi and reports that the fungi group weighed more at eight weeks.

B) Ricci cautions that he did not measure the seedlings' survival through winter.

C) Dr. Paolo Ricci studies seedlings grown with soil fungi.

D) When he sterilized the soil after four weeks, the weight gap stopped growing.

877. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: tutoring hours and a skills quiz.
- Researcher: Dr. Olivia Grant.
- Result reported: higher hours lined up with higher scores.
- Caution the researcher notes: the log does not show that the tutoring produced the scores.
- A later observation: Students with high scores the week before also tended to attend more hours.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Students with high scores the week before also tended to attend more hours, and Grant cautions that the log does not show that the tutoring produced the scores.

B) Grant reports that higher hours lined up with higher scores.

C) Grant cautions that the log does not show that the tutoring produced the scores.

D) Grant reports that it was not the case that higher hours lined up with higher scores.

878. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: county health reports from 1957.
- Researcher: Dr. Edith Lang.
- Result reported: the count of new cases was lower in the summer after the clinics.
- Caution the researcher notes: a drop in one county's report does not by itself prove the clinics caused it.
- A later observation: A neighboring county that held no clinics did not show a similar drop.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Lang reports that it was not the case that a drop in one county's report does not by itself prove the clinics caused it.

B) A neighboring county that held no clinics did not show a similar drop.

C) Lang reports that the count of new cases was lower in the summer after the clinics.

D) Lang cautions that a drop in one county's report does not by itself prove the clinics caused it.

879. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: seedlings grown with soil fungi.
- Researcher: Dr. Paolo Ricci.
- Result reported: the fungi group weighed more at eight weeks.
- Caution the researcher notes: he did not measure the seedlings' survival through winter.
- A later observation: When he sterilized the soil after four weeks, the weight gap stopped growing.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ricci reports that the fungi group weighed more at eight weeks, but cautions that he did not measure the seedlings' survival through winter.

B) When he sterilized the soil after four weeks, the weight gap stopped growing.

C) Ricci reports that the fungi group weighed more at eight weeks, which removes any need for caution about the finding.

D) Ricci reports that it was not the case that the fungi group weighed more at eight weeks.

880. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: county health reports from 1957.
- Researcher: Dr. Edith Lang.
- Result reported: the count of new cases was lower in the summer after the clinics.
- Caution the researcher notes: a drop in one county's report does not by itself prove the clinics caused it.
- A later observation: A neighboring county that held no clinics did not show a similar drop.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Lang reports that the count of new cases was lower in the summer after the clinics, whereas a later observation was that A neighboring county that held no clinics did not show a similar drop.

B) A neighboring county that held no clinics did not show a similar drop.

C) Lang reports that the count of new cases was lower in the summer after the clinics.

D) Lang reports that the count of new cases was lower in the summer after the clinics, but cautions that a drop in one county's report does not by itself prove the clinics caused it.

881. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: a reading-speed test of two typefaces.
- Researcher: Dr. Sara Lind.
- Result reported: average times for the two typefaces were nearly the same.
- Caution the researcher notes: the study did not include children.
- A later observation: Readers did report a preference, even though their speeds matched.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Lind cautions that the study did not include children.

B) Readers did report a preference, even though their speeds matched.

C) Dr. Sara Lind studies a reading-speed test of two typefaces and reports that average times for the two typefaces were nearly the same.

D) Dr. Sara Lind studies a reading-speed test of two typefaces.

882. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: a windbreak of shrubs beside crop rows.
- Researcher: Dr. Hassan Ali.
- Result reported: the rows nearest the shrubs lost less soil than the open rows.
- Caution the researcher notes: he did not measure the crop's yield.
- A later observation: Rows upwind of the shrubs, with no shelter, lost as much as the open rows.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Ali cautions that he did not measure the crop's yield.

B) Ali reports that it was not the case that the rows nearest the shrubs lost less soil than the open rows.

C) Rows upwind of the shrubs, with no shelter, lost as much as the open rows, and Ali cautions that he did not measure the crop's yield.

D) Ali reports that the rows nearest the shrubs lost less soil than the open rows.

883. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: willows in a valley where wolves had returned.
- Researcher: Dr. Rosa Nguyen.
- Result reported: banks with fewer signs of browsing had taller willow seedlings.
- Caution the researcher notes: she did not measure bird nests in the willows.
- A later observation: A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Nguyen reports that it was not the case that she did not measure bird nests in the willows.

B) A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

C) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings.

D) Nguyen cautions that she did not measure bird nests in the willows.

884. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: a reading-speed test of two typefaces.
- Researcher: Dr. Sara Lind.
- Result reported: average times for the two typefaces were nearly the same.
- Caution the researcher notes: the study did not include children.
- A later observation: Readers did report a preference, even though their speeds matched.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Lind reports that average times for the two typefaces were nearly the same, but cautions that the study did not include children.

B) Readers did report a preference, even though their speeds matched.

C) Lind reports that it was not the case that average times for the two typefaces were nearly the same.

D) Lind reports that average times for the two typefaces were nearly the same, which removes any need for caution about the finding.

885. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: willows in a valley where wolves had returned.
- Researcher: Dr. Rosa Nguyen.
- Result reported: banks with fewer signs of browsing had taller willow seedlings.
- Caution the researcher notes: she did not measure bird nests in the willows.
- A later observation: A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings, whereas a later observation was that A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

B) A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

C) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings.

D) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings, but cautions that she did not measure bird nests in the willows.

886. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: helmet use and head injuries in a city bike-share program.
- Researcher: Dr. Brian Holt.
- Result reported: helmeted riders reported fewer head injuries than riders who reported no helmet.
- Caution the researcher notes: the survey cannot separate the helmet from the other habits of the riders who wear one.
- A later observation: Helmeted riders also reported slower average speeds.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Helmeted riders also reported slower average speeds.

B) Dr. Brian Holt studies helmet use and head injuries in a city bike-share program and reports that helmeted riders reported fewer head injuries than riders who reported no helmet.

C) Dr. Brian Holt studies helmet use and head injuries in a city bike-share program.

D) Holt cautions that the survey cannot separate the helmet from the other habits of the riders who wear one.

887. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: a cap on class size in an after-school program.
- Researcher: Dr. Christine Dahl.
- Result reported: the smaller sections finished a larger share of students.
- Caution the researcher notes: the comparison does not separate class size from the instructor.
- A later observation: The smaller sections were also taught by the most experienced instructors.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The smaller sections were also taught by the most experienced instructors, and Dahl cautions that the comparison does not separate class size from the instructor.

B) Dahl reports that the smaller sections finished a larger share of students.

C) Dahl cautions that the comparison does not separate class size from the instructor.

D) Dahl reports that it was not the case that the smaller sections finished a larger share of students.

888. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: homework hours and quiz scores in one course.
- Researcher: Dr. Hannah Weiss.
- Result reported: students with more reported hours had higher scores on average.
- Caution the researcher notes: the study did not observe whether the reported hours were accurate.
- A later observation: The top scores also belonged to students who had scored high before the homework was assigned.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Weiss reports that it was not the case that the study did not observe whether the reported hours were accurate.

B) The top scores also belonged to students who had scored high before the homework was assigned.

C) Weiss cautions that the study did not observe whether the reported hours were accurate.

D) Weiss reports that students with more reported hours had higher scores on average.

889. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: helmet use and head injuries in a city bike-share program.
- Researcher: Dr. Brian Holt.
- Result reported: helmeted riders reported fewer head injuries than riders who reported no helmet.
- Caution the researcher notes: the survey cannot separate the helmet from the other habits of the riders who wear one.
- A later observation: Helmeted riders also reported slower average speeds.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Holt reports that helmeted riders reported fewer head injuries than riders who reported no helmet, which removes any need for caution about the finding.

B) Holt reports that it was not the case that helmeted riders reported fewer head injuries than riders who reported no helmet.

C) Helmeted riders also reported slower average speeds.

D) Holt reports that helmeted riders reported fewer head injuries than riders who reported no helmet, but cautions that the survey cannot separate the helmet from the other habits of the riders who wear one.

890. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: homework hours and quiz scores in one course.
- Researcher: Dr. Hannah Weiss.
- Result reported: students with more reported hours had higher scores on average.
- Caution the researcher notes: the study did not observe whether the reported hours were accurate.
- A later observation: The top scores also belonged to students who had scored high before the homework was assigned.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The top scores also belonged to students who had scored high before the homework was assigned.

B) Weiss reports that students with more reported hours had higher scores on average.

C) Weiss reports that students with more reported hours had higher scores on average, whereas a later observation was that The top scores also belonged to students who had scored high before the homework was assigned.

D) Weiss reports that students with more reported hours had higher scores on average, but cautions that the study did not observe whether the reported hours were accurate.

891. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: dust layers in an ice core.
- Researcher: Dr. Ellen Zhou.
- Result reported: the thickest dust layers fell in years the notes call dry.
- Caution the researcher notes: the core does not name the source of every grain of dust.
- A later observation: A thick layer also appears in a year the notes call wet and windy.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Ellen Zhou studies dust layers in an ice core.

B) A thick layer also appears in a year the notes call wet and windy.

C) Dr. Ellen Zhou studies dust layers in an ice core and reports that the thickest dust layers fell in years the notes call dry.

D) Zhou cautions that the core does not name the source of every grain of dust.

892. *Easy — result only*
While researching a paper, a student took the following notes:
- Subject studied: ration cards and a grocer's ledger from 1943.
- Researcher: Dr. Anita Shah.
- Result reported: sugar sales were higher on the inspection days.
- Caution the researcher notes: the ledger cannot show that inspectors caused shoppers to buy.
- A later observation: Tea sales, which were not rationed, did not rise on those days.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Shah cautions that the ledger cannot show that inspectors caused shoppers to buy.

B) Shah reports that sugar sales were higher on the inspection days.

C) Shah reports that it was not the case that sugar sales were higher on the inspection days.

D) Tea sales, which were not rationed, did not rise on those days, and Shah cautions that the ledger cannot show that inspectors caused shoppers to buy.

893. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: a restored wetland beside a river.
- Researcher: Dr. Leo Martins.
- Result reported: the wetland depth rose while the road remained dry.
- Caution the researcher notes: the gauges were not left in place over the winter.
- A later observation: In a larger storm the wetland filled and the road flooded anyway.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Martins reports that it was not the case that the gauges were not left in place over the winter.

B) Martins reports that the wetland depth rose while the road remained dry.

C) Martins cautions that the gauges were not left in place over the winter.

D) In a larger storm the wetland filled and the road flooded anyway.

894. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: dust layers in an ice core.
- Researcher: Dr. Ellen Zhou.
- Result reported: the thickest dust layers fell in years the notes call dry.
- Caution the researcher notes: the core does not name the source of every grain of dust.
- A later observation: A thick layer also appears in a year the notes call wet and windy.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Zhou reports that the thickest dust layers fell in years the notes call dry, but cautions that the core does not name the source of every grain of dust.

B) A thick layer also appears in a year the notes call wet and windy.

C) Zhou reports that the thickest dust layers fell in years the notes call dry, which removes any need for caution about the finding.

D) Zhou reports that it was not the case that the thickest dust layers fell in years the notes call dry.

895. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: a restored wetland beside a river.
- Researcher: Dr. Leo Martins.
- Result reported: the wetland depth rose while the road remained dry.
- Caution the researcher notes: the gauges were not left in place over the winter.
- A later observation: In a larger storm the wetland filled and the road flooded anyway.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) In a larger storm the wetland filled and the road flooded anyway.

B) Martins reports that the wetland depth rose while the road remained dry, but cautions that the gauges were not left in place over the winter.

C) Martins reports that the wetland depth rose while the road remained dry, whereas a later observation was that In a larger storm the wetland filled and the road flooded anyway.

D) Martins reports that the wetland depth rose while the road remained dry.

896. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: desert varnish on sunlit rocks.
- Researcher: Dr. Nadia Korol.
- Result reported: rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- Caution the researcher notes: she did not determine whether microbes or chemistry laid the varnish down.
- A later observation: A rock newly exposed by a slide had almost no varnish.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Dr. Nadia Korol studies desert varnish on sunlit rocks and reports that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

B) A rock newly exposed by a slide had almost no varnish.

C) Dr. Nadia Korol studies desert varnish on sunlit rocks.

D) Korol cautions that she did not determine whether microbes or chemistry laid the varnish down.

897. *Medium — result only*
While researching a paper, a student took the following notes:
- Subject studied: afternoon pavement temperatures in one neighborhood.
- Researcher: Dr. Priya Raman.
- Result reported: pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- Caution the researcher notes: she did not measure temperatures inside houses.
- A later observation: After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

B) After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before, and Raman cautions that she did not measure temperatures inside houses.

C) Raman cautions that she did not measure temperatures inside houses.

D) Raman reports that it was not the case that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

898. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: a mill town in the 1840s.
- Researcher: Dr. Patrick Doyle.
- Result reported: the letters name start and end times that add up to more hours than the notice lists.
- Caution the researcher notes: he found no letters from the mill owner about the schedule.
- A later observation: A company ledger of wages for piecework does not list hours at all.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Doyle cautions that he found no letters from the mill owner about the schedule.

B) A company ledger of wages for piecework does not list hours at all.

C) Doyle reports that it was not the case that he found no letters from the mill owner about the schedule.

D) Doyle reports that the letters name start and end times that add up to more hours than the notice lists.

899. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: desert varnish on sunlit rocks.
- Researcher: Dr. Nadia Korol.
- Result reported: rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- Caution the researcher notes: she did not determine whether microbes or chemistry laid the varnish down.
- A later observation: A rock newly exposed by a slide had almost no varnish.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Korol reports that it was not the case that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

B) Korol reports that rocks that dried slowly had thicker varnish than rocks that dried within an hour, but cautions that she did not determine whether microbes or chemistry laid the varnish down.

C) Korol reports that rocks that dried slowly had thicker varnish than rocks that dried within an hour, which removes any need for caution about the finding.

D) A rock newly exposed by a slide had almost no varnish.

900. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: a mill town in the 1840s.
- Researcher: Dr. Patrick Doyle.
- Result reported: the letters name start and end times that add up to more hours than the notice lists.
- Caution the researcher notes: he found no letters from the mill owner about the schedule.
- A later observation: A company ledger of wages for piecework does not list hours at all.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Doyle reports that the letters name start and end times that add up to more hours than the notice lists, but cautions that he found no letters from the mill owner about the schedule.

B) Doyle reports that the letters name start and end times that add up to more hours than the notice lists, whereas a later observation was that A company ledger of wages for piecework does not list hours at all.

C) A company ledger of wages for piecework does not list hours at all.

D) Doyle reports that the letters name start and end times that add up to more hours than the notice lists.

901. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: recipes in an eighteenth-century household book.
- Researcher: Dr. Sylvia Markham.
- Result reported: winter recipes list dried fruit more often and fresh herbs less often.
- Caution the researcher notes: the book does not say which recipes were actually cooked.
- A later observation: A recipe with no season marked uses both.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Markham cautions that the book does not say which recipes were actually cooked.

B) Dr. Sylvia Markham studies recipes in an eighteenth-century household book and reports that winter recipes list dried fruit more often and fresh herbs less often.

C) A recipe with no season marked uses both.

D) Dr. Sylvia Markham studies recipes in an eighteenth-century household book.

902. *Medium — result only*
While researching a paper, a student took the following notes:
- Subject studied: iron-gall ink on nineteenth-century letters.
- Researcher: Dr. Helen Cho.
- Result reported: the inked lines were often the places where the paper had cracked or fallen out.
- Caution the researcher notes: she did not test modern inks.
- A later observation: Letters written in pencil on the same desks showed no such holes.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Cho reports that the inked lines were often the places where the paper had cracked or fallen out.

B) Letters written in pencil on the same desks showed no such holes, and Cho cautions that she did not test modern inks.

C) Cho cautions that she did not test modern inks.

D) Cho reports that it was not the case that the inked lines were often the places where the paper had cracked or fallen out.

903. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: passive voice in lab reports.
- Researcher: Dr. Sophie Bernard.
- Result reported: readers rated the passive versions as more certain.
- Caution the researcher notes: she did not test whether scientists themselves prefer one voice.
- A later observation: When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

B) Bernard reports that it was not the case that she did not test whether scientists themselves prefer one voice.

C) Bernard reports that readers rated the passive versions as more certain.

D) Bernard cautions that she did not test whether scientists themselves prefer one voice.

904. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: recipes in an eighteenth-century household book.
- Researcher: Dr. Sylvia Markham.
- Result reported: winter recipes list dried fruit more often and fresh herbs less often.
- Caution the researcher notes: the book does not say which recipes were actually cooked.
- A later observation: A recipe with no season marked uses both.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Markham reports that winter recipes list dried fruit more often and fresh herbs less often, which removes any need for caution about the finding.

B) Markham reports that winter recipes list dried fruit more often and fresh herbs less often, but cautions that the book does not say which recipes were actually cooked.

C) Markham reports that it was not the case that winter recipes list dried fruit more often and fresh herbs less often.

D) A recipe with no season marked uses both.

905. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: passive voice in lab reports.
- Researcher: Dr. Sophie Bernard.
- Result reported: readers rated the passive versions as more certain.
- Caution the researcher notes: she did not test whether scientists themselves prefer one voice.
- A later observation: When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Bernard reports that readers rated the passive versions as more certain, but cautions that she did not test whether scientists themselves prefer one voice.

B) Bernard reports that readers rated the passive versions as more certain, whereas a later observation was that When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

C) When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

D) Bernard reports that readers rated the passive versions as more certain.

906. *Easy — researcher and subject only*
While researching a paper, a student took the following notes:
- Subject studied: audience copies of a poem and library loans of the same book.
- Researcher: Dr. Angela Brooks.
- Result reported: the loan count was higher in the month after the reading than in the month before.
- Caution the researcher notes: the loan records do not show whether the borrowers attended the reading.
- A later observation: A second reading in another city was followed by a similar brief rise.

The student wants to introduce the researcher and the subject only, without a result, a caution, or a later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Brooks cautions that the loan records do not show whether the borrowers attended the reading.

B) A second reading in another city was followed by a similar brief rise.

C) Dr. Angela Brooks studies audience copies of a poem and library loans of the same book and reports that the loan count was higher in the month after the reading than in the month before.

D) Dr. Angela Brooks studies audience copies of a poem and library loans of the same book.

907. *Medium — result only*
While researching a paper, a student took the following notes:
- Subject studied: bees in rooftop hives and in a suburban park.
- Researcher: Dr. Imani Cole.
- Result reported: the rooftop count was higher than the park count.
- Caution the researcher notes: one year cannot show whether the city is safer for bees over time.
- A later observation: The same rooftops had lower counts during a week of heavy smoke.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) The same rooftops had lower counts during a week of heavy smoke, and Cole cautions that one year cannot show whether the city is safer for bees over time.

B) Cole reports that it was not the case that the rooftop count was higher than the park count.

C) Cole cautions that one year cannot show whether the city is safer for bees over time.

D) Cole reports that the rooftop count was higher than the park count.

908. *Medium — caution only*
While researching a paper, a student took the following notes:
- Subject studied: steel bridges in hot weather.
- Researcher: Dr. Miguel Santos.
- Result reported: the gaps at the joints were narrower in the afternoon than at dawn.
- Caution the researcher notes: the crews did not measure traffic weight.
- A later observation: On a cool cloudy day the afternoon gaps barely changed.

The student wants to state the caution only, without the result or the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Santos cautions that the crews did not measure traffic weight.

B) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn.

C) Santos reports that it was not the case that the crews did not measure traffic weight.

D) On a cool cloudy day the afternoon gaps barely changed.

909. *Medium — result plus a limit*
While researching a paper, a student took the following notes:
- Subject studied: audience copies of a poem and library loans of the same book.
- Researcher: Dr. Angela Brooks.
- Result reported: the loan count was higher in the month after the reading than in the month before.
- Caution the researcher notes: the loan records do not show whether the borrowers attended the reading.
- A later observation: A second reading in another city was followed by a similar brief rise.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Brooks reports that it was not the case that the loan count was higher in the month after the reading than in the month before.

B) Brooks reports that the loan count was higher in the month after the reading than in the month before, which removes any need for caution about the finding.

C) A second reading in another city was followed by a similar brief rise.

D) Brooks reports that the loan count was higher in the month after the reading than in the month before, but cautions that the loan records do not show whether the borrowers attended the reading.

910. *Hard — result contrasted with a later observation*
While researching a paper, a student took the following notes:
- Subject studied: steel bridges in hot weather.
- Researcher: Dr. Miguel Santos.
- Result reported: the gaps at the joints were narrower in the afternoon than at dawn.
- Caution the researcher notes: the crews did not measure traffic weight.
- A later observation: On a cool cloudy day the afternoon gaps barely changed.

The student wants to contrast the result with the later observation.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

A) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn, whereas a later observation was that On a cool cloudy day the afternoon gaps barely changed.

B) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn.

C) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn, but cautions that the crews did not measure traffic weight.

D) On a cool cloudy day the afternoon gaps barely changed.

Expression of Ideas: Transitions

911. *Easy — addition*
The trail is steep. _____, the last mile is unmarked.

Which choice completes the text with the most logical transition?

A) Nevertheless

B) As a result

C) In addition

D) For example

912. *Easy — cause and result*
The kiln was heated too quickly. _____, the glaze blistered and pulled away from the clay.

Which choice completes the text with the most logical transition?

A) Moreover

B) For instance

C) As a result

D) However

913. *Medium — contrast*
The trail is steep for the first hour. _____, the last mile is nearly flat.

Which choice completes the text with the most logical transition?

A) As a result

B) Moreover

C) However

D) For instance

914. *Medium — sequence*
At 6:10 the night clerk unlocked the Cedar Room. _____, she logged the temperature of Kiln B.

Which choice completes the text with the most logical transition?

A) For example

B) As a result

C) Then

D) Nevertheless

915. *Hard — concession*
The Cedar Dock survey covered only one winter. _____, the same crack pattern showed up in the spring photographs.

Which choice completes the text with the most logical transition?

A) Still

B) As a result

C) Nevertheless

D) For example

916. *Hard — example*
Several desert plants store water in their tissues. _____, the saguaro holds water in its pleated stem and swells after rain.

Which choice completes the text with the most logical transition?

A) As a result

B) Moreover

C) For example

D) Nevertheless

917. *Easy — addition*
The novel quotes two diaries. _____, it includes a map of the 1850 route.

Which choice completes the text with the most logical transition?

A) Furthermore

B) For instance

C) Therefore

D) By contrast

918. *Easy — cause and result*
The soil was sandy and drained within minutes. _____, the tomato plants wilted the day after each watering.

Which choice completes the text with the most logical transition?

A) In addition

B) Nevertheless

C) For example

D) Therefore

919. *Medium — contrast*
The first draft was disorganized. _____, the revision was tight and clear.

Which choice completes the text with the most logical transition?

A) In addition

B) Therefore

C) Nevertheless

D) For example

920. *Medium — sequence*
The archivist set the mill ledger on a cushion. _____, she copied the 1881 date onto a card.

Which choice completes the text with the most logical transition?

A) For instance

B) Therefore

C) By contrast

D) Next

921. *Hard — concession*
The first batch from Kiln B was small. _____, every later batch from that kiln cracked in the same place.

Which choice completes the text with the most logical transition?

A) For instance

B) By contrast

C) All the same

D) Therefore

922. *Hard — example*
Some migratory birds travel thousands of miles without a long stop. _____, the bar-tailed godwit can fly from Alaska to New Zealand in a single journey.

Which choice completes the text with the most logical transition?

A) By contrast

B) For instance

C) In addition

D) Therefore

923. *Easy — addition*
The lab replaced the cracked beakers. _____, it ordered a backup thermometer.

Which choice completes the text with the most logical transition?

A) Moreover

B) Even so

C) Consequently

D) For example

924. *Easy — cause and result*
The invitation was sent to an old address. _____, several guests never received it.

Which choice completes the text with the most logical transition?

A) By contrast

B) Furthermore

C) For instance

D) Consequently

925. *Medium — contrast*
The sky was clear at dawn. _____, rain began before noon.

Which choice completes the text with the most logical transition?

A) Consequently

B) Furthermore

C) For instance

D) By contrast

926. *Medium — sequence*
Jonah wiped the rim of the bowl. _____, he dipped the piece in the glaze.

Which choice completes the text with the most logical transition?

A) Consequently

B) For example

C) Even so

D) After that

927. *Hard — concession*
Room 12 has only twelve desks. _____, the workshop still finished the census of the ledgers.

Which choice completes the text with the most logical transition?

A) For example

B) Even so

C) Consequently

D) That said

928. *Hard — example*
A few city programs measure success by returns, not by fines. _____, after Reed dropped overdue fees, more books came back within a month.

Which choice completes the text with the most logical transition?

A) Even so

B) For example

C) Furthermore

D) Consequently

929. *Easy — addition*
The city planted oaks along the avenue. _____, it widened the sidewalks.

Which choice completes the text with the most logical transition?

A) In addition

B) For this reason

C) For instance

D) However

930. *Easy — cause and result*
Ice covered the front step. _____, the building manager closed the entrance.

Which choice completes the text with the most logical transition?

A) Even so

B) For this reason

C) For example

D) Moreover

931. *Medium — contrast*
The device fits in a coat pocket. _____, it stores several thousand photographs.

Which choice completes the text with the most logical transition?

A) Even so

B) For this reason

C) Moreover

D) For example

932. *Medium — sequence*
The crew chalked the east wall. _____, they measured the studs a second time.

Which choice completes the text with the most logical transition?

A) For instance

B) However

C) Subsequently

D) For this reason

933. *Hard — concession*
The Mill Creek notes are written in a hard hand. _____, the dates in them match the newspaper.

Which choice completes the text with the most logical transition?

A) Nonetheless

B) For this reason

C) However

D) For instance

934. *Hard — example*
Certain alloys expand very little when heated. _____, Invar, a nickel-iron alloy, is used where a change in length would ruin a measurement.

Which choice completes the text with the most logical transition?

A) Moreover

B) For this reason

C) However

D) For instance

935. *Easy — addition*
The essay cites the 1910 speech. _____, it quotes a letter written the same week.

Which choice completes the text with the most logical transition?

A) Nevertheless

B) Furthermore

C) As a result

D) For example

936. *Easy — cause and result*
The musician skipped two weeks of practice. _____, the difficult passage fell apart at the recital.

Which choice completes the text with the most logical transition?

A) In addition

B) For instance

C) However

D) As a result

937. *Medium — contrast*
The recipe looks elaborate. _____, it uses only four ingredients.

Which choice completes the text with the most logical transition?

A) In addition

B) For instance

C) However

D) As a result

938. *Medium — sequence*
Maya rosined the bow. _____, she played the four measures without stopping.

Which choice completes the text with the most logical transition?

A) Then

B) For example

C) Nevertheless

D) As a result

939. *Hard — concession*
The North Haven sample left out the newest cottages. _____, the erosion line still moved inland in every older lot.

Which choice completes the text with the most logical transition?

A) As a result

B) Nevertheless

C) For example

D) Still

940. *Hard — example*
Some archives preserve sound as well as paper. _____, the library holds wax cylinders of speeches recorded in the 1890s.

Which choice completes the text with the most logical transition?

A) In addition

B) As a result

C) For example

D) Nevertheless

941. *Easy — addition*
The bakery stopped using the old oven. _____, it hired a second baker for the morning shift.

Which choice completes the text with the most logical transition?

A) By contrast

B) Therefore

C) Moreover

D) For instance

942. *Easy — cause and result*
A page was missing from the score. _____, the quartet stopped in the third movement.

Which choice completes the text with the most logical transition?

A) Therefore

B) For example

C) Nevertheless

D) Furthermore

943. *Medium — contrast*
Attendance at the lectures fell in March. _____, it rose steadily in April.

Which choice completes the text with the most logical transition?

A) Therefore

B) Furthermore

C) For example

D) Nevertheless

944. *Medium — sequence*
The baker scored the top of the loaf. _____, he slid it onto the hot stone.

Which choice completes the text with the most logical transition?

A) Therefore

B) By contrast

C) For instance

D) Next

945. *Hard — concession*
The chapbook used a cheap paper. _____, the poems were the ones the class kept quoting.

Which choice completes the text with the most logical transition?

A) By contrast

B) All the same

C) For instance

D) Therefore

946. *Hard — example*
A number of coastal towns have moved houses away from eroding bluffs. _____, in 2018 North Haven relocated six cottages farther inland.

Which choice completes the text with the most logical transition?

A) For instance

B) Furthermore

C) Therefore

D) By contrast

947. *Easy — addition*
The museum repaired the torn canvas. _____, it improved the lighting in that gallery.

Which choice completes the text with the most logical transition?

A) Consequently

B) For example

C) Even so

D) In addition

948. *Easy — cause and result*
The filter had not been changed. _____, the pump overheated before noon.

Which choice completes the text with the most logical transition?

A) For instance

B) Moreover

C) By contrast

D) Consequently

949. *Medium — contrast*
The outer wall of the chapel is plain brick. _____, the interior is covered with painted figures.

Which choice completes the text with the most logical transition?

A) Moreover

B) Consequently

C) For instance

D) By contrast

950. *Medium — sequence*
Omar printed the chart for Room 12. _____, he taped it beside the door.

Which choice completes the text with the most logical transition?

A) Consequently

B) For example

C) Even so

D) After that

951. *Hard — concession*
The night clerk had only a pencil. _____, she recorded every temperature the kiln reached.

Which choice completes the text with the most logical transition?

A) For example

B) Consequently

C) That said

D) Even so

952. *Hard — example*
Several painters ground their own pigments. _____, Joan Mitchell's studio notes list the stones she crushed for a blue.

Which choice completes the text with the most logical transition?

A) Even so

B) Consequently

C) For example

D) Moreover

953. *Easy — addition*
The class read the poem aloud. _____, the students annotated the final couplet.

Which choice completes the text with the most logical transition?

A) Furthermore

B) For instance

C) However

D) For this reason

954. *Easy — cause and result*
The seedlings were left in full sun. _____, their leaves scorched by midafternoon.

Which choice completes the text with the most logical transition?

A) In addition

B) Even so

C) For this reason

D) For example

955. *Medium — contrast*
The sample contained only twelve households. _____, the same pattern appeared in every one of them.

Which choice completes the text with the most logical transition?

A) For this reason

B) In addition

C) Even so

D) For example

956. *Medium — sequence*
The guide filled the bottles at the pump. _____, she handed one to each hiker.

Which choice completes the text with the most logical transition?

A) Subsequently

B) However

C) For instance

D) For this reason

957. *Hard — concession*
The footbridge sways when a bus crosses. _____, it has passed the safety test for six years.

Which choice completes the text with the most logical transition?

A) For instance

B) Nonetheless

C) However

D) For this reason

958. *Hard — example*
Some bridges are designed to flex in high wind. _____, the deck of the river bridge can sway slightly without cracking.

Which choice completes the text with the most logical transition?

A) However

B) In addition

C) For instance

D) For this reason

959. *Easy — addition*
The engineer shortened the bolt. _____, she added a lock washer.

Which choice completes the text with the most logical transition?

A) Moreover

B) For example

C) Nevertheless

D) As a result

960. *Easy — cause and result*
The alarm clock failed. _____, Nora missed the first train.

Which choice completes the text with the most logical transition?

A) For instance

B) As a result

C) Furthermore

D) However

961. *Medium — contrast*
The novel opens in a quiet kitchen. _____, its last chapter is loud and abrupt.

Which choice completes the text with the most logical transition?

A) Furthermore

B) However

C) For instance

D) As a result

962. *Medium — sequence*
The editor read the last paragraph aloud. _____, she cut the repeated sentence.

Which choice completes the text with the most logical transition?

A) Nevertheless

B) For example

C) As a result

D) Then

963. *Hard — concession*
The caption is only eight words. _____, visitors stop at that case longer than at the others.

Which choice completes the text with the most logical transition?

A) Nevertheless

B) For example

C) Still

D) As a result

964. *Hard — example*
A few mathematical proofs are short enough to fit in a margin. _____, the modern proof that there are infinitely many primes takes only a few lines.

Which choice completes the text with the most logical transition?

A) For example

B) Furthermore

C) As a result

D) Nevertheless

965. *Easy — addition*
The report describes the survey method. _____, it prints the questionnaire in an appendix.

Which choice completes the text with the most logical transition?

A) By contrast

B) Therefore

C) In addition

D) For instance

966. *Easy — cause and result*
Salt was left on the steel tools. _____, they rusted over the weekend.

Which choice completes the text with the most logical transition?

A) For example

B) Therefore

C) Moreover

D) Nevertheless

967. *Medium — contrast*
The footbridge looks delicate. _____, it carries buses as well as pedestrians.

Which choice completes the text with the most logical transition?

A) Moreover

B) For example

C) Nevertheless

D) Therefore

968. *Medium — sequence*
The nurse checked the wristband. _____, she logged the dose on the chart.

Which choice completes the text with the most logical transition?

A) Next

B) For instance

C) By contrast

D) Therefore

969. *Hard — concession*
The 1910 speech fills less than a page. _____, the letter written that week depends on it.

Which choice completes the text with the most logical transition?

A) By contrast

B) For instance

C) Therefore

D) All the same

970. *Hard — example*
Some foods were dried to last through winter. _____, apple rings hung in the farmhouse attic until spring.

Which choice completes the text with the most logical transition?

A) For instance

B) Therefore

C) By contrast

D) Moreover

971. *Easy — addition*
The garden lost its tomatoes to frost. _____, the basil turned black.

Which choice completes the text with the most logical transition?

A) Consequently

B) Even so

C) For example

D) Furthermore

972. *Easy — cause and result*
The trail markers had been taken down. _____, the afternoon group lost the route.

Which choice completes the text with the most logical transition?

A) Consequently

B) In addition

C) By contrast

D) For instance

973. *Medium — contrast*
The instructions filled less than a page. _____, assembling the frame still took an hour.

Which choice completes the text with the most logical transition?

A) For instance

B) In addition

C) Consequently

D) By contrast

974. *Medium — sequence*
The mechanic lifted the wheel. _____, he tightened the loose bolt.

Which choice completes the text with the most logical transition?

A) After that

B) For example

C) Even so

D) Consequently

975. *Hard — concession*
The tomato starts were crowded in the tray. _____, nearly all of them survived the move outside.

Which choice completes the text with the most logical transition?

A) Even so

B) Consequently

C) That said

D) For example

976. *Hard — example*
Certain plays depend on a single stage object. _____, in this production a wooden chair is the only furniture.

Which choice completes the text with the most logical transition?

A) Consequently

B) Even so

C) For example

D) In addition

977. *Easy — addition*
The archive digitized the letters. _____, it transcribed the ones written in faded ink.

Which choice completes the text with the most logical transition?

A) However

B) For this reason

C) For instance

D) Moreover

978. *Easy — cause and result*
The room had no working fan. _____, the paint fumes lingered for hours.

Which choice completes the text with the most logical transition?

A) Even so

B) Furthermore

C) For this reason

D) For example

979. *Medium — contrast*
The singer was unknown in January. _____, by June the hall was sold out.

Which choice completes the text with the most logical transition?

A) For this reason

B) Furthermore

C) For example

D) Even so

980. *Medium — sequence*
The student underlined the claim. _____, she wrote a question in the margin.

Which choice completes the text with the most logical transition?

A) For this reason

B) For instance

C) Subsequently

D) However

981. *Hard — concession*
The recorder battery was down to one bar. _____, the interview was captured through the last question.

Which choice completes the text with the most logical transition?

A) However

B) Nonetheless

C) For instance

D) For this reason

982. *Hard — example*
Some letters reveal more in a postscript than in the body. _____, a note added at the bottom of the 1864 letter names the person the writer would not mention above.

Which choice completes the text with the most logical transition?

A) Furthermore

B) However

C) For instance

D) For this reason

983. *Easy — addition*
The team measured the bridge at dawn. _____, they measured it again at midafternoon.

Which choice completes the text with the most logical transition?

A) As a result

B) For example

C) Nevertheless

D) In addition

984. *Easy — cause and result*
The lens was smudged. _____, every photograph from that roll looked hazy.

Which choice completes the text with the most logical transition?

A) Moreover

B) However

C) For instance

D) As a result

985. *Medium — contrast*
The chemical is harmless in dry form. _____, it irritates skin when mixed with water.

Which choice completes the text with the most logical transition?

A) Moreover

B) As a result

C) However

D) For instance

986. *Medium — sequence*
The gardener coiled the hose. _____, he mulched the tomato beds.

Which choice completes the text with the most logical transition?

A) Nevertheless

B) Then

C) As a result

D) For example

987. *Hard — concession*
The trail map is a decade old. _____, the switchbacks above Mill Creek are still where it draws them.

Which choice completes the text with the most logical transition?

A) Still

B) As a result

C) Nevertheless

D) For example

988. *Hard — example*
A few laboratories keep null results on file. _____, the lab's 2016 folder records a reading-speed study that found no difference between two typefaces.

Which choice completes the text with the most logical transition?

A) As a result

B) For example

C) Moreover

D) Nevertheless

989. *Easy — addition*
The cookbook explains the dough. _____, it shows a photograph of the finished loaf.

Which choice completes the text with the most logical transition?

A) For instance

B) Therefore

C) Furthermore

D) By contrast

990. *Easy — cause and result*
The deadline was never announced. _____, half the class missed it.

Which choice completes the text with the most logical transition?

A) In addition

B) For example

C) Nevertheless

D) Therefore

991. *Medium — contrast*
The town's population is small. _____, its archive holds records going back to 1710.

Which choice completes the text with the most logical transition?

A) Nevertheless

B) Therefore

C) In addition

D) For example

992. *Medium — sequence*
The clerk stamped the form. _____, she returned the carbon copy.

Which choice completes the text with the most logical transition?

A) By contrast

B) For instance

C) Next

D) Therefore

993. *Hard — concession*
The glaze recipe skips the brand of clay. _____, potters who follow the times and temperatures get the same finish.

Which choice completes the text with the most logical transition?

A) Therefore

B) By contrast

C) All the same

D) For instance

994. *Hard — example*
Some trails are rebuilt with water bars to slow runoff. _____, the switchbacks above Mill Creek now include a low log at every turn.

Which choice completes the text with the most logical transition?

A) In addition

B) For instance

C) By contrast

D) Therefore

995. *Easy — addition*
The policy caps class size. _____, it adds a study hour after school.

Which choice completes the text with the most logical transition?

A) Consequently

B) Even so

C) For example

D) Moreover

996. *Easy — cause and result*
The gate latch was broken. _____, the sheep wandered into the lane.

Which choice completes the text with the most logical transition?

A) Furthermore

B) For instance

C) Consequently

D) By contrast

997. *Medium — contrast*
The experiment failed on the first attempt. _____, the second attempt produced a clear result.

Which choice completes the text with the most logical transition?

A) By contrast

B) For instance

C) Consequently

D) Furthermore

998. *Medium — sequence*
Lina saved the caption file. _____, she sent it to the printer.

Which choice completes the text with the most logical transition?

A) For example

B) Even so

C) Consequently

D) After that

999. *Hard — concession*
The orchestra had not rehearsed the new ending. _____, the chorus stayed together at the concert.

Which choice completes the text with the most logical transition?

A) Even so

B) Consequently

C) For example

D) That said

1000. *Hard — example*
Certain oral histories correct a date printed in the newspaper. _____, Mrs. Adelman's interview places the fire on a Tuesday, not on the Thursday the headline claimed.

Which choice completes the text with the most logical transition?

A) Even so

B) Consequently

C) Furthermore

D) For example
