

Digital SAT Reading and Writing

1,000 Practice Questions

This booklet is original practice in the style of the Digital SAT Reading and Writing section. It is not produced by the College Board and is not an official SAT. Each question has its own short text and four choices, as on the current test. The mix follows the College Board’s domain weights: Craft and Structure about 28 percent, Information and Ideas about 26 percent, Standard English Conventions about 26 percent, and Expression of Ideas about 20 percent. Within each skill, questions run from easier to harder. The answer key is at the end.

Passages, studies, and data are written for practice. Do not treat the fictional studies as real research findings.

How the section is weighted

Craft and Structure	280 questions
Information and Ideas	260 questions
Standard English Conventions	260 questions
Expression of Ideas	200 questions

Craft and Structure: Words in Context

1. *Easy*

The desert flowers were _____: they bloomed after the rain and were gone within a week.

Which choice completes the text with the most logical and precise word or phrase?

- A) ephemeral
- B) fragrant
- C) underground

- D) secret

116. Hard

The effect was _____: the pain faded within an hour, and by evening it was gone.

Which choice completes the text with the most logical and precise word or phrase?

- A) lasting
- B) severe
- C) transient
- D) imagined

117. Hard

The critique is _____, cutting to a contradiction in the book's central chapter rather than scolding its style.

Which choice completes the text with the most logical and precise word or phrase?

- A) personal
- B) mild
- C) trenchant
- D) late

118. Hard

The villagers were _____ of the contract and would not sign until a lawyer read every clause aloud.

Which choice completes the text with the most logical and precise word or phrase?

- A) unable
- B) wary
- C) eager
- D) absent

119. Hard

The melody is _____, and nothing in it suggests celebration.

Which choice completes the text with the most logical and precise word or phrase?

- A) joyful
- B) somber
- C) brief
- D) loud

120. Hard

The claim is _____, because no record of the alleged meeting survives.

Which choice completes the text with the most logical and precise word or phrase?

- A) documented
- B) unverifiable
- C) popular
- D) recent

121. Hard

The design is _____, limited to bare concrete and a single window.

Which choice completes the text with the most logical and precise word or phrase?

- A) fragile
- B) temporary
- C) ornate
- D) austere

122. Hard

The note in the margin is _____, and even the author's biographer cannot say what the initials mean.

Which choice completes the text with the most logical and precise word or phrase?

- A) cryptic
- B) plain
- C) lengthy
- D) forged

123. Hard

The alliance was _____, formed to win one vote and abandoned the following week.

Which choice completes the text with the most logical and precise word or phrase?

- A) expedient
- B) ancient
- C) principled
- D) secret

124. Hard

The narrator's grief is _____, and the spare sentences do not hide it.

Which choice completes the text with the most logical and precise word or phrase?

- A) hidden
- B) feigned
- C) brief
- D) palpable

125. Hard

The order was _____: identical applications were approved or denied with no stated difference.

Which choice completes the text with the most logical and precise word or phrase?

- A) written
- B) consistent
- C) early
- D) arbitrary

126. Hard

The soil is _____, and even weeds fail within a month of planting.

Which choice completes the text with the most logical and precise word or phrase?

- A) wet
- B) barren
- C) public
- D) fertile

127. Hard

The apology was _____, and she named the specific harm rather than offering a general regret.

Which choice completes the text with the most logical and precise word or phrase?

- A) heartfelt
- B) perfunctory
- C) late
- D) public

128. Hard

The procedure is _____, requiring four forms and a waiting period for a simple request.

Which choice completes the text with the most logical and precise word or phrase?

- A) secret
- B) cumbersome
- C) optional
- D) simple

129. Hard

The light was _____, with no hard shadows, because clouds covered the sun.

Which choice completes the text with the most logical and precise word or phrase?

- A) dim
- B) direct
- C) colored
- D) diffuse

130. Hard

The argument is _____: the conclusion simply repeats the assumption made in the first sentence.

Which choice completes the text with the most logical and precise word or phrase?

- A) circular
- B) popular
- C) published
- D) linear

131. Hard

The welcome was _____, with speeches, flowers, and praise far beyond the occasion.

Which choice completes the text with the most logical and precise word or phrase?

- A) official
- B) late
- C) restrained
- D) effusive

132. Hard

The texture is _____, and no stripe or knot breaks the surface.

Which choice completes the text with the most logical and precise word or phrase?

- A) varied
- B) thin
- C) rough
- D) uniform

133. Hard

The response was _____, a short note that neither praised the plan nor opposed it.

Which choice completes the text with the most logical and precise word or phrase?

- A) public
- B) heated
- C) tepid
- D) late

134. Hard

The frontier on this map is _____, and each nation shades the same valley as its own.

Which choice completes the text with the most logical and precise word or phrase?

- A) settled
- B) coastal
- C) disputed
- D) ancient

135. Hard

The remedy is _____: it eases the cough but does not treat the infection causing it.

Which choice completes the text with the most logical and precise word or phrase?

- A) curative
- B) palliative
- C) costly
- D) rare

136. Hard

The prose is _____, and the author cuts every adjective that is not needed for the sense.

Which choice completes the text with the most logical and precise word or phrase?

- A) spare
- B) confusing
- C) copied
- D) ornate

137. Hard

The tribute was _____, and the speaker avoided the grand phrases the occasion seemed to invite.

Which choice completes the text with the most logical and precise word or phrase?

- A) musical
- B) effusive
- C) late
- D) restrained

138. Hard

The finding is _____: every other site showed a decline, and this one showed a sharp rise.

Which choice completes the text with the most logical and precise word or phrase?

- A) small
- B) anomalous
- C) typical
- D) recent

139. Hard

Her reasoning is _____, and she flags each place where the evidence is thinner than the prose.

Which choice completes the text with the most logical and precise word or phrase?

- A) scrupulous
- B) careless
- C) brief
- D) public

140. Hard

The humor is _____, delivered without a smile, so that a listener may miss the joke.

Which choice completes the text with the most logical and precise word or phrase?

- A) broad
- B) visual
- C) deadpan
- D) cruel

141. Hard

The report is _____, giving each side's strongest evidence before offering a judgment.

Which choice completes the text with the most logical and precise word or phrase?

- A) brief
- B) evenhanded
- C) biased
- D) oral

142. Hard

The phrase is _____, and a word-for-word translation misses the meaning it has in this region.

Which choice completes the text with the most logical and precise word or phrase?

- A) literal
- B) long
- C) idiomatic
- D) new

143. Hard

The calm was _____, and the letters from that week show the council already preparing for a strike.

Which choice completes the text with the most logical and precise word or phrase?

- A) revealing
- B) brief
- C) deceptive
- D) public

144. Hard

The reform was _____, changing one clause of the code and leaving the rest in place.

Which choice completes the text with the most logical and precise word or phrase?

- A) secret
- B) popular
- C) incremental
- D) sweeping

145. Hard

The tone is _____, praising the plan in words that clearly mean the opposite.

Which choice completes the text with the most logical and precise word or phrase?

- A) earnest
- B) sardonic
- C) plain
- D) brief

146. Hard

The document is _____: it appears in no archive from the period, and the paper itself is modern.

Which choice completes the text with the most logical and precise word or phrase?

- A) lengthy
- B) authentic
- C) apocryphal
- D) translated

147. Hard

The pain was _____, sharp enough that she stopped speaking until it passed.

Which choice completes the text with the most logical and precise word or phrase?

- A) acute
- B) imagined
- C) mild
- D) chronic

148. Hard

The commentary is _____, pausing to correct a minor date that does not affect the story.

Which choice completes the text with the most logical and precise word or phrase?

- A) pedantic
- B) brief
- C) oral
- D) careless

149. Hard

The agreement looks _____, covering price, delivery, and what happens if a shipment is lost.

Which choice completes the text with the most logical and precise word or phrase?

- A) verbal
- B) comprehensive
- C) partial
- D) secret

150. Hard

The gesture was _____, and she offered the other side the wording it had asked for.

Which choice completes the text with the most logical and precise word or phrase?

- A) private
- B) late
- C) hostile
- D) conciliatory

151. Hard

The style is _____, leaving out steps that a specialist can supply but a new reader cannot.

Which choice completes the text with the most logical and precise word or phrase?

- A) elliptical
- B) ornate
- C) explicit
- D) copied

152. Hard

The charge is _____, and a conviction would bar him from holding office.

Which choice completes the text with the most logical and precise word or phrase?

- A) public
- B) grave
- C) trivial
- D) recent

153. Hard

The description is _____, recording the wound's size and location without any comment on the suffering.

Which choice completes the text with the most logical and precise word or phrase?

- A) emotional
- B) brief
- C) clinical
- D) vague

154. Hard

The use of the hall is _____, and the company must leave if the school needs the room.

Which choice completes the text with the most logical and precise word or phrase?

- A) provisional
- B) popular
- C) permanent
- D) illegal

155. Hard

The essay is _____, written to win a dispute rather than to describe both sides.

Which choice completes the text with the most logical and precise word or phrase?

- A) neutral
- B) narrative
- C) polemical
- D) short

156. Hard

The light is _____, and the harsh overhead bulb flattens every face on the stage.

Which choice completes the text with the most logical and precise word or phrase?

- A) dim
- B) garish
- C) colored
- D) soft

157. Hard

The summary is _____ to the chapter, changing the wording without changing the claim.

Which choice completes the text with the most logical and precise word or phrase?

- A) distorted
- B) oral
- C) brief
- D) faithful

158. Hard

The response was _____, and he answered the accusation without raising his voice or adding a new one.

Which choice completes the text with the most logical and precise word or phrase?

- A) late
- B) measured
- C) reckless
- D) silent

159. Hard

The motif is _____, returning in the first chapter, the middle, and the last scene.

Which choice completes the text with the most logical and precise word or phrase?

- A) hidden
- B) unique
- C) recurrent
- D) musical

160. Hard

The order was _____, meant to penalize the shop rather than to repair the harm.

Which choice completes the text with the most logical and precise word or phrase?

- A) written
- B) temporary
- C) compensatory
- D) punitive

Craft and Structure: Text Structure and Purpose**161. Medium**

On the night before the recital, Marisol played the same four measures until the notes were even. She let her brother's call ring unanswered. When she finally turned out the light, she left the music open on the stand.

Which choice best states the main purpose of the text?

- A) It explains why Marisol has decided to quit music.
- B) It portrays Marisol's focused preparation on the night before a recital.
- C) It compares Marisol's practice habits with her brother's.
- D) It argues that practicing the night before a performance is useless.

162. Medium

Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice best states the main purpose of the text?

- A) It explains why fishing has declined at this pier.
- B) It instructs the reader in tying a sailor's knot.
- C) It shows Ellis waiting uneasily after the other boats have returned.
- D) It argues that the harbor should replace its bell.

163. Medium

James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice best states the main purpose of the text?

- A) It argues that apologies should never be put in writing.
- B) It describes a successful reconciliation between two friends.
- C) It gives instructions for writing a formal letter.
- D) It traces James's hesitation over whether to send an apology.

164. Medium

After the guests left, Rosa stayed in the kitchen and washed the same plate twice. The good glasses were still in the cupboard; she had served water in ordinary cups. She turned the porch light off only when the street was empty.

Which choice best states the main purpose of the text?

- A) It explains how to set a formal table.
- B) It suggests, through small actions, that Rosa was strained by having guests.
- C) It describes a party that is still going on.
- D) It argues that neighbors should visit more often.

165. Medium

Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice best states the main purpose of the text?

- A) It shows Anya calming herself with a routine just before she performs.
- B) It describes the audience's reaction to the play.
- C) It argues that stages should have more scenery.
- D) It explains why Anya has been removed from the cast.

166. Medium

The book had been due for a month. Sam slid it across the counter without the excuse he had rehearsed. The librarian stamped it, said nothing about the fine, and Sam, who had expected a lecture, thanked her twice.

Which choice best states the main purpose of the text?

- A) It presents a small scene in which Sam's fear of being scolded turns out to be unnecessary.
- B) It describes Sam's favorite book in detail.
- C) It explains why Sam stole the book.
- D) It argues that libraries should charge higher fines.

167. Medium

The museum had closed, but Dana stayed on the step with her sketch of the statue she had not been allowed to finish. She added the hand from memory and then erased it. The guard who locked the side door nodded at the page and did not tell her to leave.

Which choice best states the main purpose of the text?

- A) It criticizes the museum for owning the statue.
- B) It shows Dana persisting with a sketch after she has been kept from finishing it in front of the statue.
- C) It explains how the guard lost his key.
- D) It describes a tour Dana will lead in the morning.

168. Medium

Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. In the study, she measured pavement temperature on tree-lined blocks and on bare blocks. The results showed that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks. After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It presents a debate between two researchers and does not report a finding.

169. Medium

Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out. Letters written in pencil on the same desks showed no such holes.

Which choice best describes the overall structure of the text?

- A) It presents a debate between two researchers and does not report a finding.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

170. Medium

Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. The same rooftops had lower counts during a week of heavy smoke.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It presents a debate between two researchers and does not report a finding.

171. Medium

Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard. The gap was larger in precincts that had low turnout the year before.

Which choice best describes the overall structure of the text?

- A) It defines a technical term and then traces the history of a field from ancient times to the present.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

172. Medium

Dr. Grace Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. In the study, she recorded discussions and then scored the written summaries. The results showed that summaries from students who had switched languages scored as high as summaries from students who had not. Teachers who had expected confusion found the written work orderly.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

173. Medium

Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots. Pots with no temper at all cracked most often.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

174. Medium

Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them. The following cool month, some pale colonies regained color as algae returned.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- C) It presents a debate between two researchers and does not report a finding.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

175. Medium

Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months. The gap was smaller among vendors who already had a stall of their own.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It presents a debate between two researchers and does not report a finding.
- D) It states a claim and then rejects the claim because the study produced no result.

176. Medium

Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday. In the study, her team compared blocks with measured canopy percentages. The results showed that blocks with more canopy had cooler midday surfaces. A block that lost canopy to pruning warmed the next summer.

Which choice best describes the overall structure of the text?

- A) It defines a technical term and then traces the history of a field from ancient times to the present.
- B) It states a claim and then rejects the claim because the study produced no result.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It presents a debate between two researchers and does not report a finding.

177. Medium

Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. In the study, she compared the county's own case counts for the two summers. The results showed that the count of new cases was lower in the summer after the clinics. A neighboring county that held no clinics did not show a similar drop.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It presents a debate between two researchers and does not report a finding.

178. Medium

Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It presents a debate between two researchers and does not report a finding.

179. Medium

Dr. Leo Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry. In a larger storm the wetland filled and the road flooded anyway.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It presents a debate between two researchers and does not report a finding.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

180. Medium

Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does. In the study, he compared dated letters with the notice printed the same year. The results showed that the letters name start and end times that add up to more hours than the notice lists. A company ledger of wages for piecework does not list hours at all.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It presents a debate between two researchers and does not report a finding.
- D) It states a claim and then rejects the claim because the study produced no result.

181. Medium

Dr. Miguel Santos claims that bridge decks grew longer on hot afternoons than on cool mornings. In the study, crews measured the same joints at dawn and at midafternoon. The results showed that the gaps at the joints were narrower in the afternoon than at dawn. On a cool cloudy day the afternoon gaps barely changed.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

182. Medium

Dr. Tanya Brooks claims that no-till fields lost less soil in heavy rain than plowed fields beside them. In the study, she weighed soil caught below both kinds of fields after the same storm. The results showed that less soil was caught below the no-till fields. After the no-till fields were plowed for a new crop, the next storm carried more soil.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It presents a debate between two researchers and does not report a finding.

183. Medium

Dr. Karen Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended. New checkouts also rose, so the library was busier overall.

Which choice best describes the overall structure of the text?

- A) It defines a technical term and then traces the history of a field from ancient times to the present.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

184. Medium

Dr. Clara Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey. A note on the 1602 chart says the bay was sketched from a moving ship.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It states a claim and then rejects the claim because the study produced no result.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It presents a debate between two researchers and does not report a finding.

185. Medium

Dr. Naomi Feldman claims that the two communities tell different stories about the same group of stars. In the study, she recorded tellers in both communities while they pointed out the stars. The results showed that the named stars match, and the plots of the stories do not. A third community farther inland does not tell a story about that group at all.

Which choice best describes the overall structure of the text?

- A) It defines a technical term and then traces the history of a field from ancient times to the present.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It states a claim and then rejects the claim because the study produced no result.

186. Medium

Dr. Emily Cho claims that attendance was higher on days with a scheduled garden lesson than on other days that week. In the study, she compared attendance rolls within the same classrooms. The results showed that fewer students were absent on garden days. The garden days were also days when a popular teacher was present.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It presents a debate between two researchers and does not report a finding.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

187. Medium

Dr. Paolo Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks. When he sterilized the soil after four weeks, the weight gap stopped growing.

Which choice best describes the overall structure of the text?

- A) It presents a debate between two researchers and does not report a finding.
- B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It states a claim and then rejects the claim because the study produced no result.

188. Medium

Dr. Sara Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same. Readers did report a preference, even though their speeds matched.

Which choice best describes the overall structure of the text?

- A) It defines a technical term and then traces the history of a field from ancient times to the present.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

189. Medium

Dr. Brian Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet. Helmeted riders also reported slower average speeds.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It presents a debate between two researchers and does not report a finding.

190. Medium

Dr. Margaret Poe claims that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels. In the study, she tracked remarks about the same barrels across the log. The results showed that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled. A barrel that got wet was called spoiled even though it had been heavily salted.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It presents a debate between two researchers and does not report a finding.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

191. Medium

Dr. Charles Ito claims that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign. In the study, he compared reports from before and during the restriction. The results showed that the marks in those subjects were lower in the restriction years. Marks in drawing, which had not been taught in sign, stayed about the same.

Which choice best describes the overall structure of the text?

- A) It presents a debate between two researchers and does not report a finding.
- B) It states a claim and then rejects the claim because the study produced no result.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

192. Medium

Dr. Nadia Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour. A rock newly exposed by a slide had almost no varnish.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- C) It presents a debate between two researchers and does not report a finding.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

193. Medium

Dr. Sylvia Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. In the study, she sorted the dated recipes by the season written beside them. The results showed that winter recipes list dried fruit more often and fresh herbs less often. A recipe with no season marked uses both.

Which choice best describes the overall structure of the text?

- A) It presents a debate between two researchers and does not report a finding.
- B) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

194. Medium

Dr. Angela Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before. A second reading in another city was followed by a similar brief rise.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It states a claim and then rejects the claim because the study produced no result.
- C) It presents a debate between two researchers and does not report a finding.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

195. Medium

Dr. Ingrid Solberg claims that batteries stored half charged held more of their capacity after six months than batteries stored fully charged. In the study, she measured capacity before and after storage. The results showed that the half-charged batteries lost less capacity. Batteries stored in a hot shed lost capacity regardless of the charge level.

Which choice best describes the overall structure of the text?

- A) It defines a technical term and then traces the history of a field from ancient times to the present.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

196. Medium

Dr. Olivia Grant claims that students who attended more tutoring hours scored higher on the quiz given that Friday. In the study, the school logged hours and quiz scores for one class. The results showed that higher hours lined up with higher scores. Students with high scores the week before also tended to attend more hours.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It presents a debate between two researchers and does not report a finding.

197. Medium

Dr. Felix Nguyen claims that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day. In the study, he measured mussels at marked heights on the same rock. The results showed that mussels lower down, in the wetter band, were larger. After a month of unusually high tides, mussels in the higher band grew faster than before.

Which choice best describes the overall structure of the text?

- A) It defines a technical term and then traces the history of a field from ancient times to the present.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim and then rejects the claim because the study produced no result.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

198. Medium

Dr. Hassan Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. In the study, he collected soil at several distances after one storm. The results showed that the rows nearest the shrubs lost less soil than the open rows. Rows upwind of the shrubs, with no shelter, lost as much as the open rows.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It presents a debate between two researchers and does not report a finding.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

199. Medium

Dr. Eleanor Voss claims that the second edition softens a sentence that the first edition states as a direct accusation. In the study, she compared the same paragraph in both editions. The results showed that the first edition names a person as responsible, and the second edition says only that mistakes were made. A handwritten note in one copy of the second edition says 'safer'.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It presents a debate between two researchers and does not report a finding.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It states a claim and then rejects the claim because the study produced no result.

200. Medium

Dr. Christine Dahl claims that sections kept under fifteen students had higher completion rates than larger sections of the same course. In the study, she compared completion in sections of the same subject. The results showed that the smaller sections finished a larger share of students. The smaller sections were also taught by the most experienced instructors.

Which choice best describes the overall structure of the text?

- A) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- B) It states a claim and then rejects the claim because the study produced no result.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It presents a debate between two researchers and does not report a finding.

201. Medium

Dr. Laura Kim claims that marshes with denser grass had lower peak water on the landward side during the same tide. In the study, she measured grass density and water height along one creek. The results showed that the denser stretches had lower landward peaks. Where the grass had been cut, the landward peak rose to match the open stretches.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It presents a debate between two researchers and does not report a finding.
- C) It defines a technical term and then traces the history of a field from ancient times to the present.
- D) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.

202. Medium

Dr. Anita Shah claims that the ledger records more sugar sold on days the ledger also notes a card inspection. In the study, she totaled sales on inspection days and on ordinary days in the same month. The results showed that sugar sales were higher on the inspection days. Tea sales, which were not rationed, did not rise on those days.

Which choice best describes the overall structure of the text?

- A) It states a claim and then rejects the claim because the study produced no result.
- B) It defines a technical term and then traces the history of a field from ancient times to the present.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It presents a debate between two researchers and does not report a finding.

203. Medium

Dr. Monica Reyes claims that households that received the simplified notice were more likely to pay before the deadline. In the study, she randomly assigned the simplified notice or the old notice. The results showed that a larger share of the simplified group paid on time. The simplified notice was also printed on colored paper.

Which choice best describes the overall structure of the text?

- A) It presents a debate between two researchers and does not report a finding.
- B) It states a claim and then rejects the claim because the study produced no result.
- C) It states a claim, describes a study and its result, and then adds a later observation consistent with the claim.
- D) It defines a technical term and then traces the history of a field from ancient times to the present.

204. Medium

Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock. After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It reports a result that supports the claim stated in the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It explains why the study could not be completed.

205. Medium

Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. The same rooftops had lower counts during a week of heavy smoke.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It explains why the study could not be completed.
- C) It defines a technical term that the last sentence depends on.
- D) It reports a result that supports the claim stated in the first sentence.

206. Medium

Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae. When the algae was washed off one plot, that plot's melt slowed.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It introduces a new claim that contradicts the first sentence.
- C) It explains why the study could not be completed.
- D) It reports a result that supports the claim stated in the first sentence.

207. Medium

Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them. The following cool month, some pale colonies regained color as algae returned.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It introduces a new claim that contradicts the first sentence.
- C) It explains why the study could not be completed.
- D) It defines a technical term that the last sentence depends on.

208. Medium

Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand. A later revival restored the scene and ran past two hours.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It explains why the study could not be completed.
- B) It introduces a new claim that contradicts the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It reports a result that supports the claim stated in the first sentence.

209. Medium

Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It explains why the study could not be completed.
- C) It defines a technical term that the last sentence depends on.
- D) It introduces a new claim that contradicts the first sentence.

210. Medium

Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain. When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It explains why the study could not be completed.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It introduces a new claim that contradicts the first sentence.

211. Medium

Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. In the study, she compared contract language with dated sketches. The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work. A mural whose contract has been lost shows a similar harvest scene.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It introduces a new claim that contradicts the first sentence.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It explains why the study could not be completed.

212. Medium

Dr. Clara Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey. A note on the 1602 chart says the bay was sketched from a moving ship.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It explains why the study could not be completed.
- C) It introduces a new claim that contradicts the first sentence.
- D) It reports a result that supports the claim stated in the first sentence.

213. Medium

Dr. Yara Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. In the study, she buried seed packets at measured temperatures and then tried to sprout them. The results showed that fewer seeds sprouted from the hot center than from the cool edge. Seeds held at the same high temperature in an oven also failed to sprout.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It explains why the study could not be completed.
- B) It introduces a new claim that contradicts the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It reports a result that supports the claim stated in the first sentence.

214. Medium

Dr. Sara Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same. Readers did report a preference, even though their speeds matched.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It defines a technical term that the last sentence depends on.
- C) It introduces a new claim that contradicts the first sentence.
- D) It explains why the study could not be completed.

215. Medium

Dr. Ellen Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry. A thick layer also appears in a year the notes call wet and windy.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It reports a result that supports the claim stated in the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It explains why the study could not be completed.

216. Medium

Dr. Nadia Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour. A rock newly exposed by a slide had almost no varnish.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It explains why the study could not be completed.
- C) It introduces a new claim that contradicts the first sentence.
- D) It defines a technical term that the last sentence depends on.

217. Medium

Dr. Angela Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before. A second reading in another city was followed by a similar brief rise.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It explains why the study could not be completed.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It defines a technical term that the last sentence depends on.

218. Medium

Dr. William Drake claims that the diary names more children in one family than the manifest lists for that surname. In the study, he lined up the surname in both documents. The results showed that the diary lists three children and the manifest lists two. A later manifest from the same ship, filed at a second port, lists three.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It explains why the study could not be completed.
- C) It introduces a new claim that contradicts the first sentence.
- D) It defines a technical term that the last sentence depends on.

219. Medium

Dr. Hassan Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. In the study, he collected soil at several distances after one storm. The results showed that the rows nearest the shrubs lost less soil than the open rows. Rows upwind of the shrubs, with no shelter, lost as much as the open rows.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It explains why the study could not be completed.
- B) It defines a technical term that the last sentence depends on.
- C) It introduces a new claim that contradicts the first sentence.
- D) It reports a result that supports the claim stated in the first sentence.

220. Medium

Dr. George Salim claims that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure. In the study, he counted repetitions in the rehearsal tape and then surveyed listeners of the concert. The results showed that the most repeated passage received the highest security ratings. A passage played only once was the one listeners called unsteady.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It explains why the study could not be completed.
- C) It introduces a new claim that contradicts the first sentence.
- D) It reports a result that supports the claim stated in the first sentence.

221. Medium

Dr. Anita Shah claims that the ledger records more sugar sold on days the ledger also notes a card inspection. In the study, she totaled sales on inspection days and on ordinary days in the same month. The results showed that sugar sales were higher on the inspection days. Tea sales, which were not rationed, did not rise on those days.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It explains why the study could not be completed.
- B) It defines a technical term that the last sentence depends on.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It introduces a new claim that contradicts the first sentence.

222. Hard

On the night before the recital, Marisol played the same four measures until the notes were even. She let her brother's call ring unanswered. When she finally turned out the light, she left the music open on the stand.

Which choice best describes the function of the last sentence in the text?

- A) It introduces a new character who will perform instead.
- B) It shows that she has given up on the recital.
- C) It reinforces her focus by suggesting she expects to return to the music.
- D) It states the exact time the recital will begin.

223. Hard

Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice best describes the function of the second sentence in the text?

- A) It explains a safety rule about tangled lines.
- B) It introduces the boat he is waiting for by name.
- C) It shows that his repeated work with the line is a sign of restlessness, not a needed repair.
- D) It shows that he has finished his work and can go home.

224. Hard

James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice best describes the function of the last sentence in the text?

- A) It shows that, at the last moment, he keeps the letter instead of sending it.
- B) It reveals the name of the person he is writing to.
- C) It shows that the mailbox was out of order.
- D) It explains why the first two drafts were better.

225. Hard

After the guests left, Rosa stayed in the kitchen and washed the same plate twice. The good glasses were still in the cupboard; she had served water in ordinary cups. She turned the porch light off only when the street was empty.

Which choice best describes the function of the second sentence in the text?

- A) It hints that she avoided using the glasses she considered too good for the occasion.
- B) It shows that the guests broke the good glasses.
- C) It explains that the town was under a water restriction.
- D) It introduces a guest who stayed behind.

226. Hard

Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice best describes the function of the last sentence in the text?

- A) It shows that the repeated walk has the effect of steadying her.
- B) It explains that the table is unsafe.
- C) It shows that she is becoming more frightened as the curtain approaches.
- D) It introduces another actor who will replace her.

227. Hard

It was still dark when Mr. Okonkwo unlocked the bakery. He set aside the first tray, the one with the cracked edge, for his own breakfast, and he put the even loaves in the window. By the time the streetlight went out, the window was full and the cracked tray was already half gone.

Which choice best describes the function of the second sentence in the text?

- A) It explains that the window is broken.
- B) It introduces a customer who demands the cracked loaves.
- C) It shows that he throws the cracked tray away.
- D) It contrasts what he keeps for himself with what he is willing to display.

228. Hard

The museum had closed, but Dana stayed on the step with her sketch of the statue she had not been allowed to finish. She added the hand from memory and then erased it. The guard who locked the side door nodded at the page and did not tell her to leave.

Which choice best describes the function of the second sentence in the text?

- A) It explains that the statue has no hand.
- B) It introduces a second artist who draws the hand for her.
- C) It shows that she has decided the sketch is finished.
- D) It shows her trying to complete the sketch from memory and then rejecting that attempt.

229. Hard

Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. In the study, his team timed buses before and after the lane was painted. The results showed that afternoon bus trips were shorter after the lane opened than before it. The same buses were no faster at dawn, when the avenue was already empty.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It introduces a new claim that contradicts the first sentence.
- C) It explains why the study could not be completed.
- D) It defines a technical term that the last sentence depends on.

230. Hard

Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard. The gap was larger in precincts that had low turnout the year before.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It defines a technical term that the last sentence depends on.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It explains why the study could not be completed.

231. Hard

Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences. In the study, she compared absence logs before and after the start moved from 7:30 to 8:30. The results showed that first-period absences fell in the semester after the change. Absences in the last period of the day did not fall.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It introduces a new claim that contradicts the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It explains why the study could not be completed.

232. Hard

Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics. In the study, she played matched cylinders whose only known difference was the storage room. The results showed that more words were intelligible on the cool-room cylinders than on the attic cylinders. A cylinder moved from an attic to a cool room did not regain the words already lost.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It explains why the study could not be completed.
- B) It reports a result that supports the claim stated in the first sentence.
- C) It introduces a new claim that contradicts the first sentence.
- D) It defines a technical term that the last sentence depends on.

233. Hard

Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. In the study, she compared the county's own case counts for the two summers. The results showed that the count of new cases was lower in the summer after the clinics. A neighboring county that held no clinics did not show a similar drop.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It explains why the study could not be completed.
- C) It defines a technical term that the last sentence depends on.
- D) It reports a result that supports the claim stated in the first sentence.

234. Hard

Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does. In the study, he compared dated letters with the notice printed the same year. The results showed that the letters name start and end times that add up to more hours than the notice lists. A company ledger of wages for piecework does not list hours at all.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It reports a result that supports the claim stated in the first sentence.
- B) It introduces a new claim that contradicts the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It explains why the study could not be completed.

235. Hard

Dr. Miguel Santos claims that bridge decks grew longer on hot afternoons than on cool mornings. In the study, crews measured the same joints at dawn and at midafternoon. The results showed that the gaps at the joints were narrower in the afternoon than at dawn. On a cool cloudy day the afternoon gaps barely changed.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It reports a result that supports the claim stated in the first sentence.
- C) It introduces a new claim that contradicts the first sentence.
- D) It explains why the study could not be completed.

236. Hard

Dr. Omar Farid claims that the same vans traveled fewer miles per charge on cold mornings than on mild ones. In the study, drivers logged miles and temperature for identical routes. The results showed that miles per charge were lower when the morning temperature was lower. Using a garage that kept the vans warm overnight reduced the loss.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It explains why the study could not be completed.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It defines a technical term that the last sentence depends on.

237. Hard

Dr. Naomi Feldman claims that the two communities tell different stories about the same group of stars. In the study, she recorded tellers in both communities while they pointed out the stars. The results showed that the named stars match, and the plots of the stories do not. A third community farther inland does not tell a story about that group at all.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It explains why the study could not be completed.
- C) It introduces a new claim that contradicts the first sentence.
- D) It reports a result that supports the claim stated in the first sentence.

238. Hard

Dr. Lydia Grant claims that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday. In the study, she read both documents side by side. The results showed that the diary's Tuesday entry describes the fire, and the headline says Thursday. A later correction in the newspaper moves the date to Tuesday.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It explains why the study could not be completed.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It defines a technical term that the last sentence depends on.

239. Hard

Dr. Irene Solano claims that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment. In the study, she compared shaded and sunny parts of the same wall. The results showed that the sunny red sections had lightened more than the sunny earth-colored sections. A shaded red section had barely lightened.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It explains why the study could not be completed.
- B) It introduces a new claim that contradicts the first sentence.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It defines a technical term that the last sentence depends on.

240. Hard

Dr. Charles Ito claims that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign. In the study, he compared reports from before and during the restriction. The results showed that the marks in those subjects were lower in the restriction years. Marks in drawing, which had not been taught in sign, stayed about the same.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It explains why the study could not be completed.
- B) It defines a technical term that the last sentence depends on.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It introduces a new claim that contradicts the first sentence.

241. Hard

Dr. Thomas Berger claims that nests placed farther from the path were more likely to hatch than nests beside it. In the study, volunteers mapped nests and recorded which ones hatched. The results showed that a larger share of the distant nests hatched. When the path was closed for a month, nests beside it hatched as often as distant nests.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It reports a result that supports the claim stated in the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It explains why the study could not be completed.

242. Hard

Dr. Ingrid Solberg claims that batteries stored half charged held more of their capacity after six months than batteries stored fully charged. In the study, she measured capacity before and after storage. The results showed that the half-charged batteries lost less capacity. Batteries stored in a hot shed lost capacity regardless of the charge level.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It reports a result that supports the claim stated in the first sentence.
- C) It explains why the study could not be completed.
- D) It defines a technical term that the last sentence depends on.

243. Hard

Dr. Judith Hale claims that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left. In the study, she asked matched groups, one shown the long caption and one shown a short label. The results showed that a larger share of the long-caption group stated the claim accurately. When both captions stated the claim in the first sentence, the gap narrowed.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It introduces a new claim that contradicts the first sentence.
- B) It reports a result that supports the claim stated in the first sentence.
- C) It defines a technical term that the last sentence depends on.
- D) It explains why the study could not be completed.

244. Hard

Dr. Eleanor Voss claims that the second edition softens a sentence that the first edition states as a direct accusation. In the study, she compared the same paragraph in both editions. The results showed that the first edition names a person as responsible, and the second edition says only that mistakes were made. A handwritten note in one copy of the second edition says 'safer'.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It explains why the study could not be completed.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It introduces a new claim that contradicts the first sentence.

245. Hard

Dr. Laura Kim claims that marshes with denser grass had lower peak water on the landward side during the same tide. In the study, she measured grass density and water height along one creek. The results showed that the denser stretches had lower landward peaks. Where the grass had been cut, the landward peak rose to match the open stretches.

Which choice best describes the function of the third sentence in the overall structure of the text?

- A) It defines a technical term that the last sentence depends on.
- B) It introduces a new claim that contradicts the first sentence.
- C) It reports a result that supports the claim stated in the first sentence.
- D) It explains why the study could not be completed.

Craft and Structure: Cross-Text Connections

246. Hard

Text 1

Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. The reported evidence is that juvenile counts were higher in standing kelp than on bare rock.

Text 2

Dr. Malik Orth reports a further check: in a warmer year the kelp remained, yet juvenile counts still fell.

Based on the texts, how would Orth most likely respond to the claim in Text 1?

- A) Orth would say the pattern in Text 1 may not hold under every condition, pointing out that in a warmer year the kelp remained, yet juvenile counts still fell.
- B) Orth would say the evidence in Text 1 was invented and should be ignored.
- C) Orth is writing about an unrelated subject and would have no response to the claim.
- D) Orth would agree that there are no exceptions to the claim in Text 1.

247. Hard

Text 1

Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. The reported evidence is that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

Text 2

Dr. Owen Blake reports a further check: during a windy week the temperature gap between tree-lined and bare blocks nearly disappeared.

Based on the texts, how would Blake most likely respond to the claim in Text 1?

- A) Blake is writing about an unrelated subject and would have no response to the claim.
- B) Blake would say the evidence in Text 1 was invented and should be ignored.
- C) Blake would say the pattern in Text 1 may not hold under every condition, pointing out that during a windy week the temperature gap between tree-lined and bare blocks nearly disappeared.
- D) Blake would agree that there are no exceptions to the claim in Text 1.

248. Hard

Text 1

Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. The reported evidence is that afternoon bus trips were shorter after the lane opened than before it.

Text 2

Dr. Amy Ng reports a further check: during rush hour after the lane opened, buses were faster only when they also skipped stops, and buses that made every stop were no faster than before.

Based on the texts, how would Ng most likely respond to the claim in Text 1?

- A) Ng would say the evidence in Text 1 was invented and should be ignored.
- B) Ng would say the pattern in Text 1 may not hold under every condition, pointing out that during rush hour after the lane opened, buses were faster only when they also skipped stops, and buses that made every stop were no faster than before.
- C) Ng is writing about an unrelated subject and would have no response to the claim.
- D) Ng would agree that there are no exceptions to the claim in Text 1.

249. Hard

Text 1

Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park. The reported evidence is that the rooftop count was higher than the park count.

Text 2

Dr. Ruth Keller reports a further check: the following spring the park count exceeded the rooftop count.

Based on the texts, how would Keller most likely respond to the claim in Text 1?

- A) Keller would agree that there are no exceptions to the claim in Text 1.
- B) Keller would say the pattern in Text 1 may not hold under every condition, pointing out that the following spring the park count exceeded the rooftop count.
- C) Keller is writing about an unrelated subject and would have no response to the claim.
- D) Keller would say the evidence in Text 1 was invented and should be ignored.

250. Hard

Text 1

Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt. The reported evidence is that plots with more algae lost more ice that week than plots with less algae.

Text 2

Dr. Lila Chen reports a further check: during a cloudy week the algae-covered plots melted no faster than the bare plots.

Based on the texts, how would Chen most likely respond to the claim in Text 1?

- A) Chen would say the evidence in Text 1 was invented and should be ignored.
- B) Chen would agree that there are no exceptions to the claim in Text 1.
- C) Chen is writing about an unrelated subject and would have no response to the claim.
- D) Chen would say the pattern in Text 1 may not hold under every condition, pointing out that during a cloudy week the algae-covered plots melted no faster than the bare plots.

251. Hard

Text 1

Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. The reported evidence is that fewer shell-tempered pots cracked than sand-tempered pots.

Text 2

Dr. Asha Reddy reports a further check: in a cooler kiln the sand-tempered pots cracked no more often than the shell-tempered ones.

Based on the texts, how would Reddy most likely respond to the claim in Text 1?

- A) Reddy would say the pattern in Text 1 may not hold under every condition, pointing out that in a cooler kiln the sand-tempered pots cracked no more often than the shell-tempered ones.
- B) Reddy is writing about an unrelated subject and would have no response to the claim.
- C) Reddy would agree that there are no exceptions to the claim in Text 1.
- D) Reddy would say the evidence in Text 1 was invented and should be ignored.

252. Hard

Text 1

Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences. The reported evidence is that first-period absences fell in the semester after the change.

Text 2

Dr. Tom Bradley reports a further check: at a school that moved to the later start but also lengthened the first-period commute for most students, first-period absences did not fall.

Based on the texts, how would Bradley most likely respond to the claim in Text 1?

- A) Bradley would say the evidence in Text 1 was invented and should be ignored.
- B) Bradley would say the pattern in Text 1 may not hold under every condition, pointing out that at a school that moved to the later start but also lengthened the first-period commute for most students, first-period absences did not fall.
- C) Bradley is writing about an unrelated subject and would have no response to the claim.
- D) Bradley would agree that there are no exceptions to the claim in Text 1.

253. Hard

Text 1

Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics. The reported evidence is that more words were intelligible on the cool-room cylinders than on the attic cylinders.

Text 2

Dr. Ian Brooks reports a further check: cylinders that had been played many times were faint even when they had been stored in a cool room.

Based on the texts, how would Brooks most likely respond to the claim in Text 1?

- A) Brooks is writing about an unrelated subject and would have no response to the claim.
- B) Brooks would agree that there are no exceptions to the claim in Text 1.
- C) Brooks would say the pattern in Text 1 may not hold under every condition, pointing out that cylinders that had been played many times were faint even when they had been stored in a cool room.
- D) Brooks would say the evidence in Text 1 was invented and should be ignored.

254. Hard

Text 1

Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday. The reported evidence is that blocks with more canopy had cooler midday surfaces.

Text 2

Dr. Seth Kaplan reports a further check: at midday in a strong wind, blocks with more canopy were not cooler than open blocks.

Based on the texts, how would Kaplan most likely respond to the claim in Text 1?

- A) Kaplan would agree that there are no exceptions to the claim in Text 1.
- B) Kaplan would say the pattern in Text 1 may not hold under every condition, pointing out that at midday in a strong wind, blocks with more canopy were not cooler than open blocks.
- C) Kaplan would say the evidence in Text 1 was invented and should be ignored.
- D) Kaplan is writing about an unrelated subject and would have no response to the claim.

255. Hard

Text 1

Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. The reported evidence is that the cut scene was the one marked 'too long' in the director's hand.

Text 2

Dr. Michael Stern reports a further check: a timing sheet shows the production was already under two hours before that scene was cut.

Based on the texts, how would Stern most likely respond to the claim in Text 1?

- A) Stern is writing about an unrelated subject and would have no response to the claim.
- B) Stern would say the pattern in Text 1 may not hold under every condition, pointing out that a timing sheet shows the production was already under two hours before that scene was cut.
- C) Stern would agree that there are no exceptions to the claim in Text 1.
- D) Stern would say the evidence in Text 1 was invented and should be ignored.

256. Hard

Text 1

Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. The reported evidence is that banks with fewer signs of browsing had taller willow seedlings.

Text 2

Dr. Carl Jensen reports a further check: on a dry tributary, browsing decreased but willows stayed short during a drought.

Based on the texts, how would Jensen most likely respond to the claim in Text 1?

- A) Jensen would agree that there are no exceptions to the claim in Text 1.
- B) Jensen would say the evidence in Text 1 was invented and should be ignored.
- C) Jensen is writing about an unrelated subject and would have no response to the claim.
- D) Jensen would say the pattern in Text 1 may not hold under every condition, pointing out that on a dry tributary, browsing decreased but willows stayed short during a drought.

257. Hard

Text 1

Dr. Hannah Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores. The reported evidence is that students with more reported hours had higher scores on average.

Text 2

Dr. Victor Alam reports a further check: in a course where homework hours were assigned by a coin toss, extra hours were not associated with higher quiz scores.

Based on the texts, how would Alam most likely respond to the claim in Text 1?

- A) Alam would say the pattern in Text 1 may not hold under every condition, pointing out that in a course where homework hours were assigned by a coin toss, extra hours were not associated with higher quiz scores.
- B) Alam would agree that there are no exceptions to the claim in Text 1.
- C) Alam would say the evidence in Text 1 was invented and should be ignored.
- D) Alam is writing about an unrelated subject and would have no response to the claim.

258. Hard

Text 1

Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does. The reported evidence is that the letters name start and end times that add up to more hours than the notice lists.

Text 2

Dr. Claire Sutton reports a further check: the notice Doyle compared was an early draft, and the notice actually posted lists the longer hours the letters name.

Based on the texts, how would Sutton most likely respond to the claim in Text 1?

- A) Sutton would say the evidence in Text 1 was invented and should be ignored.
- B) Sutton would say the pattern in Text 1 may not hold under every condition, pointing out that the notice Doyle compared was an early draft, and the notice actually posted lists the longer hours the letters name.
- C) Sutton is writing about an unrelated subject and would have no response to the claim.
- D) Sutton would agree that there are no exceptions to the claim in Text 1.

259. Hard

Text 1

Dr. Miguel Santos claims that bridge decks grew longer on hot afternoons than on cool mornings. The reported evidence is that the gaps at the joints were narrower in the afternoon than at dawn.

Text 2

Dr. Irene Pauli reports a further check: a bridge with sliding joints showed little change in deck stress on the same hot afternoon.

Based on the texts, how would Pauli most likely respond to the claim in Text 1?

- A) Pauli would say the pattern in Text 1 may not hold under every condition, pointing out that a bridge with sliding joints showed little change in deck stress on the same hot afternoon.
- B) Pauli would agree that there are no exceptions to the claim in Text 1.
- C) Pauli would say the evidence in Text 1 was invented and should be ignored.
- D) Pauli is writing about an unrelated subject and would have no response to the claim.

260. Hard

Text 1

Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. The reported evidence is that the sketches show occupations named in the contracts, such as harvesting and mill work.

Text 2

Dr. Robert Kim reports a further check: the sketch for one building shows a harvest, but that building's contract asked for a portrait of the mayor and not for a scene of work.

Based on the texts, how would Kim most likely respond to the claim in Text 1?

- A) Kim is writing about an unrelated subject and would have no response to the claim.
- B) Kim would say the evidence in Text 1 was invented and should be ignored.
- C) Kim would say the pattern in Text 1 may not hold under every condition, pointing out that the sketch for one building shows a harvest, but that building's contract asked for a portrait of the mayor and not for a scene of work.
- D) Kim would agree that there are no exceptions to the claim in Text 1.

261. Hard

Text 1

Dr. Karen Ito claims that more overdue books came back in the months after fines ended than in the months before. The reported evidence is that returns of overdue books rose after fines ended.

Text 2

Dr. Ellen Price reports a further check: returns of overdue books had already started rising the month before fines ended, when the library extended its hours.

Based on the texts, how would Price most likely respond to the claim in Text 1?

- A) Price is writing about an unrelated subject and would have no response to the claim.
- B) Price would say the pattern in Text 1 may not hold under every condition, pointing out that returns of overdue books had already started rising the month before fines ended, when the library extended its hours.
- C) Price would say the evidence in Text 1 was invented and should be ignored.
- D) Price would agree that there are no exceptions to the claim in Text 1.

262. Hard

Text 1

Dr. Clara Mendes claims that the 1602 chart shows a bay that later surveys place farther west. The reported evidence is that the bay drawn in 1602 sits east of the bay on the later survey.

Text 2

Dr. Henry Cho reports a further check: applied with its own scale bar, the 1602 bay sits on top of the bay in the later survey.

Based on the texts, how would Cho most likely respond to the claim in Text 1?

- A) Cho would say the evidence in Text 1 was invented and should be ignored.
- B) Cho would say the pattern in Text 1 may not hold under every condition, pointing out that applied with its own scale bar, the 1602 bay sits on top of the bay in the later survey.
- C) Cho would agree that there are no exceptions to the claim in Text 1.
- D) Cho is writing about an unrelated subject and would have no response to the claim.

263. Hard

Text 1

Dr. Naomi Feldman claims that the two communities tell different stories about the same group of stars. The reported evidence is that the named stars match, and the plots of the stories do not.

Text 2

Dr. Lucas Meyer reports a further check: in one of the two communities, the stars named in the recorded story are not the stars the tellers point to.

Based on the texts, how would Meyer most likely respond to the claim in Text 1?

- A) Meyer would agree that there are no exceptions to the claim in Text 1.
- B) Meyer would say the pattern in Text 1 may not hold under every condition, pointing out that in one of the two communities, the stars named in the recorded story are not the stars the tellers point to.
- C) Meyer is writing about an unrelated subject and would have no response to the claim.
- D) Meyer would say the evidence in Text 1 was invented and should be ignored.

264. Hard

Text 1

Dr. Emily Cho claims that attendance was higher on days with a scheduled garden lesson than on other days that week. The reported evidence is that fewer students were absent on garden days.

Text 2

Dr. Mark Feldman reports a further check: on garden days that fell on exam days, attendance was lower than on ordinary days without a garden lesson.

Based on the texts, how would Feldman most likely respond to the claim in Text 1?

- A) Feldman is writing about an unrelated subject and would have no response to the claim.
- B) Feldman would agree that there are no exceptions to the claim in Text 1.
- C) Feldman would say the evidence in Text 1 was invented and should be ignored.
- D) Feldman would say the pattern in Text 1 may not hold under every condition, pointing out that on garden days that fell on exam days, attendance was lower than on ordinary days without a garden lesson.

265. Hard

Text 1

Dr. Paolo Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. The reported evidence is that the fungi group weighed more at eight weeks.

Text 2

Dr. June Park reports a further check: under very low light both groups stayed small, and the fungi group was not heavier.

Based on the texts, how would Park most likely respond to the claim in Text 1?

- A) Park would say the evidence in Text 1 was invented and should be ignored.
- B) Park would agree that there are no exceptions to the claim in Text 1.
- C) Park is writing about an unrelated subject and would have no response to the claim.
- D) Park would say the pattern in Text 1 may not hold under every condition, pointing out that under very low light both groups stayed small, and the fungi group was not heavier.

266. Hard

Text 1

Dr. Sara Lind claims that the study found no reliable difference in reading speed between the two typefaces. The reported evidence is that average times for the two typefaces were nearly the same.

Text 2

Dr. Malik Orth reports a further check: a later test using very small print did find a speed difference between the typefaces.

Based on the texts, how would Orth most likely respond to the claim in Text 1?

- A) Orth would say the pattern in Text 1 may not hold under every condition, pointing out that a later test using very small print did find a speed difference between the typefaces.
- B) Orth would agree that there are no exceptions to the claim in Text 1.
- C) Orth would say the evidence in Text 1 was invented and should be ignored.
- D) Orth is writing about an unrelated subject and would have no response to the claim.

267. Hard

Text 1

Dr. Brian Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. The reported evidence is that helmeted riders reported fewer head injuries than riders who reported no helmet.

Text 2

Dr. Alicia Romero reports a further check: among riders who all reported the same speed, the injury gap between helmeted and unhelmeted riders was smaller.

Based on the texts, how would Romero most likely respond to the claim in Text 1?

- A) Romero is writing about an unrelated subject and would have no response to the claim.
- B) Romero would agree that there are no exceptions to the claim in Text 1.
- C) Romero would say the pattern in Text 1 may not hold under every condition, pointing out that among riders who all reported the same speed, the injury gap between helmeted and unhelmeted riders was smaller.
- D) Romero would say the evidence in Text 1 was invented and should be ignored.

268. Hard

Text 1

Dr. Margaret Poe claims that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels. The reported evidence is that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.

Text 2

Dr. David Chen reports a further check: on a shorter voyage both the heavy-salt and light-salt barrels were still called sound at landing.

Based on the texts, how would Chen most likely respond to the claim in Text 1?

- A) Chen would say the evidence in Text 1 was invented and should be ignored.
- B) Chen is writing about an unrelated subject and would have no response to the claim.
- C) Chen would agree that there are no exceptions to the claim in Text 1.
- D) Chen would say the pattern in Text 1 may not hold under every condition, pointing out that on a shorter voyage both the heavy-salt and light-salt barrels were still called sound at landing.

269. Hard

Text 1

Dr. Charles Ito claims that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign. The reported evidence is that the marks in those subjects were lower in the restriction years.

Text 2

Dr. Mary Ellison reports a further check: marks at the school were already falling the year before the restriction began.

Based on the texts, how would Ellison most likely respond to the claim in Text 1?

- A) Ellison would say the evidence in Text 1 was invented and should be ignored.
- B) Ellison would say the pattern in Text 1 may not hold under every condition, pointing out that marks at the school were already falling the year before the restriction began.
- C) Ellison is writing about an unrelated subject and would have no response to the claim.
- D) Ellison would agree that there are no exceptions to the claim in Text 1.

270. Hard

Text 1

Dr. Rachel Stein claims that clinics that sent a reminder text had fewer missed appointments the next month. The reported evidence is that the texting clinics had a lower miss rate.

Text 2

Dr. John Adeyemi reports a further check: a clinic whose reminder texts arrived after the appointment time saw no drop in missed appointments.

Based on the texts, how would Adeyemi most likely respond to the claim in Text 1?

- A) Adeyemi would agree that there are no exceptions to the claim in Text 1.
- B) Adeyemi is writing about an unrelated subject and would have no response to the claim.
- C) Adeyemi would say the pattern in Text 1 may not hold under every condition, pointing out that a clinic whose reminder texts arrived after the appointment time saw no drop in missed appointments.
- D) Adeyemi would say the evidence in Text 1 was invented and should be ignored.

271. Hard

Text 1

Dr. Sylvia Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. The reported evidence is that winter recipes list dried fruit more often and fresh herbs less often.

Text 2

Dr. Peter Lang reports a further check: several recipes marked winter in that book are in a later handwriting and list fresh herbs rather than dried fruit.

Based on the texts, how would Lang most likely respond to the claim in Text 1?

- A) Lang would say the pattern in Text 1 may not hold under every condition, pointing out that several recipes marked winter in that book are in a later handwriting and list fresh herbs rather than dried fruit.
- B) Lang is writing about an unrelated subject and would have no response to the claim.
- C) Lang would say the evidence in Text 1 was invented and should be ignored.
- D) Lang would agree that there are no exceptions to the claim in Text 1.

272. Hard

Text 1

Dr. Angela Brooks claims that loans of the book rose in the month after a public reading and fell again later. The reported evidence is that the loan count was higher in the month after the reading than in the month before.

Text 2

Dr. Henry Cho reports a further check: the month after the reading was also the month a large course assigned the book, and a library with the assignment but no reading saw the same rise.

Based on the texts, how would Cho most likely respond to the claim in Text 1?

- A) Cho would say the evidence in Text 1 was invented and should be ignored.
- B) Cho would agree that there are no exceptions to the claim in Text 1.
- C) Cho would say the pattern in Text 1 may not hold under every condition, pointing out that the month after the reading was also the month a large course assigned the book, and a library with the assignment but no reading saw the same rise.
- D) Cho is writing about an unrelated subject and would have no response to the claim.

273. Hard

Text 1

Dr. Ingrid Solberg claims that batteries stored half charged held more of their capacity after six months than batteries stored fully charged. The reported evidence is that the half-charged batteries lost less capacity.

Text 2

Dr. Seth Kaplan reports a further check: when storage lasted only a week, full and half charge lost about the same small amount.

Based on the texts, how would Kaplan most likely respond to the claim in Text 1?

- A) Kaplan would agree that there are no exceptions to the claim in Text 1.
- B) Kaplan would say the pattern in Text 1 may not hold under every condition, pointing out that when storage lasted only a week, full and half charge lost about the same small amount.
- C) Kaplan would say the evidence in Text 1 was invented and should be ignored.
- D) Kaplan is writing about an unrelated subject and would have no response to the claim.

274. Hard

Text 1

Dr. Olivia Grant claims that students who attended more tutoring hours scored higher on the quiz given that Friday. The reported evidence is that higher hours lined up with higher scores.

Text 2

Dr. Brian Holt reports a further check: in a week when tutoring was canceled, the Friday scores still lined up with the previous week's scores.

Based on the texts, how would Holt most likely respond to the claim in Text 1?

- A) Holt would say the pattern in Text 1 may not hold under every condition, pointing out that in a week when tutoring was canceled, the Friday scores still lined up with the previous week's scores.
- B) Holt would say the evidence in Text 1 was invented and should be ignored.
- C) Holt would agree that there are no exceptions to the claim in Text 1.
- D) Holt is writing about an unrelated subject and would have no response to the claim.

275. Hard

Text 1

Dr. Judith Hale claims that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left. The reported evidence is that a larger share of the long-caption group stated the claim accurately.

Text 2

Dr. Alice Peng reports a further check: visitors who spent the same number of minutes in the room but skipped the caption usually missed the claim.

Based on the texts, how would Peng most likely respond to the claim in Text 1?

- A) Peng would agree that there are no exceptions to the claim in Text 1.
- B) Peng would say the pattern in Text 1 may not hold under every condition, pointing out that visitors who spent the same number of minutes in the room but skipped the caption usually missed the claim.
- C) Peng is writing about an unrelated subject and would have no response to the claim.
- D) Peng would say the evidence in Text 1 was invented and should be ignored.

276. Hard

Text 1

Dr. Hassan Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. The reported evidence is that the rows nearest the shrubs lost less soil than the open rows.

Text 2

Dr. Tanya Brooks reports a further check: in a storm that came from the opposite direction, the previously sheltered rows lost as much soil as the open ones.

Based on the texts, how would Brooks most likely respond to the claim in Text 1?

- A) Brooks would say the evidence in Text 1 was invented and should be ignored.
- B) Brooks would say the pattern in Text 1 may not hold under every condition, pointing out that in a storm that came from the opposite direction, the previously sheltered rows lost as much soil as the open ones.
- C) Brooks would agree that there are no exceptions to the claim in Text 1.
- D) Brooks is writing about an unrelated subject and would have no response to the claim.

277. Hard

Text 1

Dr. Mei Lin claims that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall. The reported evidence is that treated windows had fewer recorded strikes.

Text 2

Dr. Thomas Berger reports a further check: on a wall that faces a blank courtyard rather than trees, treated and untreated windows both had almost no strikes.

Based on the texts, how would Berger most likely respond to the claim in Text 1?

- A) Berger would say the evidence in Text 1 was invented and should be ignored.
- B) Berger is writing about an unrelated subject and would have no response to the claim.
- C) Berger would agree that there are no exceptions to the claim in Text 1.
- D) Berger would say the pattern in Text 1 may not hold under every condition, pointing out that on a wall that faces a blank courtyard rather than trees, treated and untreated windows both had almost no strikes.

278. Hard

Text 1

Dr. George Salim claims that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure. The reported evidence is that the most repeated passage received the highest security ratings.

Text 2

Dr. Sophie Bernard reports a further check: a different quartet that repeated a passage only in a sloppy run-through did not receive high security ratings for it.

Based on the texts, how would Bernard most likely respond to the claim in Text 1?

- A) Bernard would say the pattern in Text 1 may not hold under every condition, pointing out that a different quartet that repeated a passage only in a sloppy run-through did not receive high security ratings for it.
- B) Bernard would agree that there are no exceptions to the claim in Text 1.
- C) Bernard would say the evidence in Text 1 was invented and should be ignored.
- D) Bernard is writing about an unrelated subject and would have no response to the claim.

279. Hard

Text 1

Dr. Laura Kim claims that marshes with denser grass had lower peak water on the landward side during the same tide. The reported evidence is that the denser stretches had lower landward peaks.

Text 2

Dr. Leo Martins reports a further check: during a tide that never reached the grass line, dense and sparse stretches showed the same low water.

Based on the texts, how would Martins most likely respond to the claim in Text 1?

- A) Martins would say the evidence in Text 1 was invented and should be ignored.
- B) Martins is writing about an unrelated subject and would have no response to the claim.
- C) Martins would agree that there are no exceptions to the claim in Text 1.
- D) Martins would say the pattern in Text 1 may not hold under every condition, pointing out that during a tide that never reached the grass line, dense and sparse stretches showed the same low water.

280. Hard

Text 1

Dr. Victor Hume claims that boxes facing east were occupied earlier in the spring than boxes facing north on the same fence. The reported evidence is that east-facing boxes held nesting material on earlier dates.

Text 2

Dr. Ingrid Solberg reports a further check: on a fence in deep shade all day, east-facing and north-facing boxes were occupied on similar dates.

Based on the texts, how would Solberg most likely respond to the claim in Text 1?

- A) Solberg would say the pattern in Text 1 may not hold under every condition, pointing out that on a fence in deep shade all day, east-facing and north-facing boxes were occupied on similar dates.
- B) Solberg would say the evidence in Text 1 was invented and should be ignored.
- C) Solberg is writing about an unrelated subject and would have no response to the claim.
- D) Solberg would agree that there are no exceptions to the claim in Text 1.

Information and Ideas: Central Ideas and Details

281. Easy

Dr. Elena Voss has studied kelp forests along the California coast. Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock.

Which choice best states the main idea of the text?

- A) The text's main point is that the divers did not count adult rockfish.
- B) The text is mainly a set of instructions for how to carry out the following procedure: divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock.
- C) Voss concludes that it is not the case that standing kelp is associated with higher numbers of juvenile rockfish.
- D) Voss's study supports the claim that standing kelp is associated with higher numbers of juvenile rockfish.

282. Easy

Dr. Luis Ortega has studied bus trips on Center Avenue. Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. In the study, his team timed buses before and after the lane was painted. The results showed that afternoon bus trips were shorter after the lane opened than before it.

Which choice best states the main idea of the text?

- A) The text's main point is that the study did not survey riders' satisfaction.
- B) Ortega concludes that it is not the case that a dedicated bus lane is associated with shorter bus trips at rush hour.
- C) Ortega's study supports the claim that a dedicated bus lane is associated with shorter bus trips at rush hour.
- D) The text is mainly a set of instructions for how to carry out the following procedure: his team timed buses before and after the lane was painted.

283. Easy

Dr. Andrei Sokolov has studied algae on a melting glacier. Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae.

Which choice best states the main idea of the text?

- A) Sokolov's study supports the claim that darker algae on the ice is associated with faster local melt.
- B) The text's main point is that the team did not compare air temperatures above the plots.
- C) The text is mainly a set of instructions for how to carry out the following procedure: his team measured algae cover and melt on adjacent plots.
- D) Sokolov concludes that it is not the case that darker algae on the ice is associated with faster local melt.

284. Easy

Dr. Joan Ekstrom has studied a high school that moved its start time later. Ekstrom claims that a later start was associated with fewer first-period absences. In the study, she compared absence logs before and after the start moved from 7:30 to 8:30. The results showed that first-period absences fell in the semester after the change.

Which choice best states the main idea of the text?

- A) Ekstrom concludes that it is not the case that a later start was associated with fewer first-period absences.
- B) The text's main point is that she did not measure how long students actually slept.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she compared absence logs before and after the start moved from 7:30 to 8:30.
- D) Ekstrom's study supports the claim that a later start was associated with fewer first-period absences.

285. Easy

Dr. Fatima Noor has studied small loans to market vendors. Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months.

Which choice best states the main idea of the text?

- A) Noor concludes that it is not the case that vendors who received a loan were more likely to still be trading six months later than vendors who did not.
- B) The text's main point is that the study does not show that every loan was spent on the business.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she followed two groups of vendors who had applied to the same program.
- D) Noor's study supports the claim that vendors who received a loan were more likely to still be trading six months later than vendors who did not.

286. Easy

Dr. Edith Lang has studied county health reports from 1957. Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. In the study, she compared the county's own case counts for the two summers. The results showed that the count of new cases was lower in the summer after the clinics.

Which choice best states the main idea of the text?

- A) Lang concludes that it is not the case that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.
- B) The text is mainly a set of instructions for how to carry out the following procedure: she compared the county's own case counts for the two summers.
- C) Lang's study supports the claim that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.
- D) The text's main point is that a drop in one county's report does not by itself prove the clinics caused it.

287. Easy

Dr. Leo Martins has studied a restored wetland beside a river. Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry.

Which choice best states the main idea of the text?

- A) The text's main point is that the gauges were not left in place over the winter.
- B) Martins's study supports the claim that the wetland held floodwater that would otherwise have reached the road.
- C) The text is mainly a set of instructions for how to carry out the following procedure: gauges recorded water depth in the wetland and on the road during the same storm.
- D) Martins concludes that it is not the case that the wetland held floodwater that would otherwise have reached the road.

288. Easy

Dr. Miguel Santos has studied steel bridges in hot weather. Santos claims that bridge decks grew longer on hot afternoons than on cool mornings. In the study, crews measured the same joints at dawn and at midafternoon. The results showed that the gaps at the joints were narrower in the afternoon than at dawn.

Which choice best states the main idea of the text?

- A) Santos's study supports the claim that bridge decks grew longer on hot afternoons than on cool mornings.
- B) The text is mainly a set of instructions for how to carry out the following procedure: crews measured the same joints at dawn and at midafternoon.
- C) The text's main point is that the crews did not measure traffic weight.
- D) Santos concludes that it is not the case that bridge decks grew longer on hot afternoons than on cool mornings.

289. Easy

Dr. Karen Ito has studied a city that stopped charging library overdue fines. Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended.

Which choice best states the main idea of the text?

- A) The text is mainly a set of instructions for how to carry out the following procedure: the library compared return counts for the two periods.
- B) Ito concludes that it is not the case that more overdue books came back in the months after fines ended than in the months before.
- C) The text's main point is that other changes, including longer open hours, happened in the same months.
- D) Ito's study supports the claim that more overdue books came back in the months after fines ended than in the months before.

290. Easy

Dr. Paolo Ricci has studied seedlings grown with soil fungi. Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks.

Which choice best states the main idea of the text?

- A) Ricci's study supports the claim that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them.
- B) The text is mainly a set of instructions for how to carry out the following procedure: he used the same soil, light, and water, and added the fungi only to one group.
- C) Ricci concludes that it is not the case that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them.
- D) The text's main point is that he did not measure the seedlings' survival through winter.

291. Easy

Dr. Irene Solano has studied pigment on an outdoor fresco. Solano claims that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment. In the study, she compared shaded and sunny parts of the same wall. The results showed that the sunny red sections had lightened more than the sunny earth-colored sections.

Which choice best states the main idea of the text?

- A) The text is mainly a set of instructions for how to carry out the following procedure: she compared shaded and sunny parts of the same wall.
- B) Solano's study supports the claim that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment.
- C) The text's main point is that she did not remove any pigment for a laboratory test.
- D) Solano concludes that it is not the case that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment.

292. Easy

Dr. Ellen Zhou has studied dust layers in an ice core. Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry.

Which choice best states the main idea of the text?

- A) The text's main point is that the core does not name the source of every grain of dust.
- B) Zhou's study supports the claim that thicker dust layers in the core line up with years the nearby valley recorded as drought.
- C) Zhou concludes that it is not the case that thicker dust layers in the core line up with years the nearby valley recorded as drought.
- D) The text is mainly a set of instructions for how to carry out the following procedure: she matched dated layers in the ice with the valley's harvest notes.

293. Easy

Dr. Rachel Stein has studied a reminder text and missed clinic appointments. Stein claims that clinics that sent a reminder text had fewer missed appointments the next month. In the study, she compared clinics that started texting with clinics that did not. The results showed that the texting clinics had a lower miss rate.

Which choice best states the main idea of the text?

- A) Stein concludes that it is not the case that clinics that sent a reminder text had fewer missed appointments the next month.
- B) The text's main point is that the comparison does not isolate the text from the new evening hour.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she compared clinics that started texting with clinics that did not.
- D) Stein's study supports the claim that clinics that sent a reminder text had fewer missed appointments the next month.

294. Easy

Dr. Angela Brooks has studied audience copies of a poem and library loans of the same book. Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before.

Which choice best states the main idea of the text?

- A) Brooks concludes that it is not the case that loans of the book rose in the month after a public reading and fell again later.
- B) The text is mainly a set of instructions for how to carry out the following procedure: she compared monthly loan counts with the date of the reading.
- C) Brooks's study supports the claim that loans of the book rose in the month after a public reading and fell again later.
- D) The text's main point is that the loan records do not show whether the borrowers attended the reading.

295. Easy

Dr. Olivia Grant has studied tutoring hours and a skills quiz. Grant claims that students who attended more tutoring hours scored higher on the quiz given that Friday. In the study, the school logged hours and quiz scores for one class. The results showed that higher hours lined up with higher scores.

Which choice best states the main idea of the text?

- A) Grant concludes that it is not the case that students who attended more tutoring hours scored higher on the quiz given that Friday.
- B) The text is mainly a set of instructions for how to carry out the following procedure: the school logged hours and quiz scores for one class.
- C) Grant's study supports the claim that students who attended more tutoring hours scored higher on the quiz given that Friday.
- D) The text's main point is that the log does not show that the tutoring produced the scores.

296. Easy

Dr. Hassan Ali has studied a windbreak of shrubs beside crop rows. Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. In the study, he collected soil at several distances after one storm. The results showed that the rows nearest the shrubs lost less soil than the open rows.

Which choice best states the main idea of the text?

- A) The text's main point is that he did not measure the crop's yield.
- B) Ali's study supports the claim that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open.
- C) The text is mainly a set of instructions for how to carry out the following procedure: he collected soil at several distances after one storm.
- D) Ali concludes that it is not the case that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open.

297. Easy

Dr. Christine Dahl has studied a cap on class size in an after-school program. Dahl claims that sections kept under fifteen students had higher completion rates than larger sections of the same course. In the study, she compared completion in sections of the same subject. The results showed that the smaller sections finished a larger share of students.

Which choice best states the main idea of the text?

- A) The text is mainly a set of instructions for how to carry out the following procedure: she compared completion in sections of the same subject.
- B) The text's main point is that the comparison does not separate class size from the instructor.
- C) Dahl's study supports the claim that sections kept under fifteen students had higher completion rates than larger sections of the same course.
- D) Dahl concludes that it is not the case that sections kept under fifteen students had higher completion rates than larger sections of the same course.

298. Easy

Dr. Anita Shah has studied ration cards and a grocer's ledger from 1943. Shah claims that the ledger records more sugar sold on days the ledger also notes a card inspection. In the study, she totaled sales on inspection days and on ordinary days in the same month. The results showed that sugar sales were higher on the inspection days.

Which choice best states the main idea of the text?

- A) Shah concludes that it is not the case that the ledger records more sugar sold on days the ledger also notes a card inspection.
- B) Shah's study supports the claim that the ledger records more sugar sold on days the ledger also notes a card inspection.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she totaled sales on inspection days and on ordinary days in the same month.
- D) The text's main point is that the ledger cannot show that inspectors caused shoppers to buy.

299. Medium

Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice best states the main idea of the text?

- A) The passage describes the history of the harbor bell.
- B) The passage is mainly an explanation of how to recoil a line.
- C) Ellis is relaxed and ready to leave now that the boats are in.
- D) Ellis stays on the pier, restless, watching for a boat that has not come in with the others.

300. Medium

Lena labeled the last box and then opened it again to check the blue bowl. It was there, wrapped, where she had put it. She carried that box to the truck herself and set it behind the driver's seat, not with the stack of boxes she had told the movers to take.

Which choice best states the main idea of the text?

- A) Lena is indifferent to whether the blue bowl arrives safely.
- B) Lena is taking special care to keep one fragile object with her during the move.
- C) The passage is mainly a list of instructions for movers.
- D) The passage argues that people should own fewer dishes.

301. Medium

James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice best states the main idea of the text?

- A) James comes close to sending an apology and then decides not to.
- B) James mails the apology as soon as he finishes it.
- C) The passage is mainly about how paper should be folded.
- D) The passage explains the postal schedule in James's town.

302. Medium

After the guests left, Rosa stayed in the kitchen and washed the same plate twice. The good glasses were still in the cupboard; she had served water in ordinary cups. She turned the porch light off only when the street was empty.

Which choice best states the main idea of the text?

- A) Rosa is relieved and careless now that the guests have gone.
- B) The passage compares Rosa's cooking with her neighbor's.
- C) Rosa's actions after the gathering suggest she had been anxious about the guests.
- D) The passage is mainly a set of instructions for washing plates.

303. Medium

On the late bus, Malik reread the sentence he had underlined that morning. At his stop he did not get off. He rode to the end of the line, still mouthing the words, and only then walked back toward home.

Which choice best states the main idea of the text?

- A) Malik puts the reading aside and gets off promptly at his stop.
- B) Malik is so caught up in a sentence from his reading that he misses his stop.
- C) The passage argues that the city should add more bus lines.
- D) The passage is mainly a description of the bus route.

304. Medium

Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice best states the main idea of the text?

- A) The passage is mainly a description of a table used as a prop.
- B) The passage explains how a theater curtain is operated.
- C) Anya uses a repeated walk on the stage to steady herself before the performance.
- D) Anya is calm from the start and uninterested in the stage.

305. Medium

The book had been due for a month. Sam slid it across the counter without the excuse he had rehearsed. The librarian stamped it, said nothing about the fine, and Sam, who had expected a lecture, thanked her twice.

Which choice best states the main idea of the text?

- A) The passage is mainly about how a library stamp works.
- B) Sam argues with the librarian about a fine.
- C) The passage explains the library's hours.
- D) Sam returns a late book braced for a scolding that does not come.

306. Medium

It was still dark when Mr. Okonkwo unlocked the bakery. He set aside the first tray, the one with the cracked edge, for his own breakfast, and he put the even loaves in the window. By the time the streetlight went out, the window was full and the cracked tray was already half gone.

Which choice best states the main idea of the text?

- A) Mr. Okonkwo puts the cracked loaves in the window and keeps the best for himself.
- B) The passage explains the price of bread in the town.
- C) The passage is mainly about a broken streetlight.
- D) Mr. Okonkwo prepares the display with care, keeping the imperfect tray for himself.

307. Medium

Dr. Priya Raman has studied afternoon pavement temperatures in one neighborhood. Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them. In the study, she measured pavement temperature on tree-lined blocks and on bare blocks. The results showed that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.

Which choice best states the main idea of the text?

- A) The text's main point is that she did not measure temperatures inside houses.
- B) Raman concludes that it is not the case that blocks with street trees have cooler midafternoon pavement than blocks without them.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she measured pavement temperature on tree-lined blocks and on bare blocks.
- D) Raman's study supports the claim that blocks with street trees have cooler midafternoon pavement than blocks without them.

308. Medium

Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters. Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out.

Which choice best states the main idea of the text?

- A) Cho concludes that it is not the case that iron-gall ink is associated with holes and cracks in the paper beneath it.
- B) The text's main point is that she did not test modern inks.
- C) Cho's study supports the claim that iron-gall ink is associated with holes and cracks in the paper beneath it.
- D) The text is mainly a set of instructions for how to carry out the following procedure: she examined letters whose ink had been identified as iron gall.

309. Medium

Dr. Imani Cole has studied bees in rooftop hives and in a suburban park. Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count.

Which choice best states the main idea of the text?

- A) The text's main point is that one year cannot show whether the city is safer for bees over time.
- B) The text is mainly a set of instructions for how to carry out the following procedure: her team counted bee species in the hives and in the park.
- C) Cole's study supports the claim that rooftop hives in that city hold more bee species than the nearby park.
- D) Cole concludes that it is not the case that rooftop hives in that city hold more bee species than the nearby park.

310. Medium

Dr. Nina Patel has studied turnout in a local election. Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard.

Which choice best states the main idea of the text?

- A) The text's main point is that the study cannot show that every recipient read the card.
- B) Patel's study supports the claim that a mailed reminder is associated with slightly higher turnout.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she compared precincts that received a postcard with precincts that did not.
- D) Patel concludes that it is not the case that a mailed reminder is associated with slightly higher turnout.

311. Medium

Dr. Grace Adeyemi has studied students who switch languages during class discussion. Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. In the study, she recorded discussions and then scored the written summaries. The results showed that summaries from students who had switched languages scored as high as summaries from students who had not.

Which choice best states the main idea of the text?

- A) The text is mainly a set of instructions for how to carry out the following procedure: she recorded discussions and then scored the written summaries.
- B) Adeyemi's study supports the claim that students who switched languages in discussion still wrote clear summaries in the language of the exam.
- C) Adeyemi concludes that it is not the case that students who switched languages in discussion still wrote clear summaries in the language of the exam.
- D) The text's main point is that the study did not score spoken answers on the exam.

312. Medium

Dr. Marco Bell has studied clay pots from a riverside workshop. Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots.

Which choice best states the main idea of the text?

- A) Bell concludes that it is not the case that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.
- B) The text is mainly a set of instructions for how to carry out the following procedure: he fired matched vessels that differed only in the temper added to the clay.
- C) The text's main point is that he did not test whether the pots survived later use over a fire.
- D) Bell's study supports the claim that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.

313. Medium

Dr. Nora Feldman has studied a reef after a heat wave. Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them. In the study, divers recorded color and algae on tagged colonies. The results showed that colonies that kept their algae stayed darker than colonies that expelled them.

Which choice best states the main idea of the text?

- A) The text's main point is that the divers did not measure fish counts on the reef.
- B) The text is mainly a set of instructions for how to carry out the following procedure: divers recorded color and algae on tagged colonies.
- C) Feldman concludes that it is not the case that corals that kept their algal partners kept more of their color than corals that expelled them.
- D) Feldman's study supports the claim that corals that kept their algal partners kept more of their color than corals that expelled them.

314. Medium

Dr. Ruth Adelman has studied wax-cylinder recordings from the 1890s. Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics. In the study, she played matched cylinders whose only known difference was the storage room. The results showed that more words were intelligible on the cool-room cylinders than on the attic cylinders.

Which choice best states the main idea of the text?

- A) Adelman concludes that it is not the case that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics.
- B) The text is mainly a set of instructions for how to carry out the following procedure: she played matched cylinders whose only known difference was the storage room.
- C) The text's main point is that she did not compare cylinders of music with cylinders of speech.
- D) Adelman's study supports the claim that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics.

315. Medium

Dr. Camille Duval has studied summer surface temperatures under city trees. Duval claims that larger canopy cover is associated with cooler surfaces at midday. In the study, her team compared blocks with measured canopy percentages. The results showed that blocks with more canopy had cooler midday surfaces.

Which choice best states the main idea of the text?

- A) The text's main point is that the team did not measure winter temperatures.
- B) Duval concludes that it is not the case that larger canopy cover is associated with cooler surfaces at midday.
- C) Duval's study supports the claim that larger canopy cover is associated with cooler surfaces at midday.
- D) The text is mainly a set of instructions for how to carry out the following procedure: her team compared blocks with measured canopy percentages.

316. Medium

Dr. Rosa Nguyen has studied willows in a valley where wolves had returned. Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings.

Which choice best states the main idea of the text?

- A) The text is mainly a set of instructions for how to carry out the following procedure: she measured seedling height and signs of browsing on the same banks.
- B) The text's main point is that she did not measure bird nests in the willows.
- C) Nguyen concludes that it is not the case that willow seedlings grew taller on banks where browsing decreased after wolves returned.
- D) Nguyen's study supports the claim that willow seedlings grew taller on banks where browsing decreased after wolves returned.

317. Medium

Dr. Hannah Weiss has studied homework hours and quiz scores in one course. Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores. In the study, she collected reported hours and quiz scores from the same students. The results showed that students with more reported hours had higher scores on average.

Which choice best states the main idea of the text?

- A) The text's main point is that the study did not observe whether the reported hours were accurate.
- B) Weiss concludes that it is not the case that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores.
- C) Weiss's study supports the claim that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores.
- D) The text is mainly a set of instructions for how to carry out the following procedure: she collected reported hours and quiz scores from the same students.

318. Medium

Dr. Patrick Doyle has studied a mill town in the 1840s. Doyle claims that letters from workers describe longer hours than the company's posted notice does. In the study, he compared dated letters with the notice printed the same year. The results showed that the letters name start and end times that add up to more hours than the notice lists.

Which choice best states the main idea of the text?

- A) Doyle concludes that it is not the case that letters from workers describe longer hours than the company's posted notice does.
- B) Doyle's study supports the claim that letters from workers describe longer hours than the company's posted notice does.
- C) The text's main point is that he found no letters from the mill owner about the schedule.
- D) The text is mainly a set of instructions for how to carry out the following procedure: he compared dated letters with the notice printed the same year.

319. Medium

Dr. Sophie Bernard has studied passive voice in lab reports. Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain.

Which choice best states the main idea of the text?

- A) The text's main point is that she did not test whether scientists themselves prefer one voice.
- B) Bernard's study supports the claim that readers judged reports written in the passive voice to sound more certain, even when the results were the same.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she gave readers matched reports that differed only in voice.
- D) Bernard concludes that it is not the case that readers judged reports written in the passive voice to sound more certain, even when the results were the same.

320. Medium

Dr. June Harlow has studied murals painted for public buildings in the 1930s. Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement. In the study, she compared contract language with dated sketches. The results showed that the sketches show occupations named in the contracts, such as harvesting and mill work.

Which choice best states the main idea of the text?

- A) Harlow concludes that it is not the case that the contracts required the murals to show local work, and the surviving sketches match that requirement.
- B) The text's main point is that she did not interview anyone who watched the murals being painted.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she compared contract language with dated sketches.
- D) Harlow's study supports the claim that the contracts required the murals to show local work, and the surviving sketches match that requirement.

321. Medium

Dr. Tanya Brooks has studied fields farmed without plowing. Brooks claims that no-till fields lost less soil in heavy rain than plowed fields beside them. In the study, she weighed soil caught below both kinds of fields after the same storm. The results showed that less soil was caught below the no-till fields.

Which choice best states the main idea of the text?

- A) Brooks's study supports the claim that no-till fields lost less soil in heavy rain than plowed fields beside them.
- B) The text's main point is that she did not measure the crop yield.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she weighed soil caught below both kinds of fields after the same storm.
- D) Brooks concludes that it is not the case that no-till fields lost less soil in heavy rain than plowed fields beside them.

322. Medium

Dr. Omar Farid has studied range of electric delivery vans in cold weather. Farid claims that the same vans traveled fewer miles per charge on cold mornings than on mild ones. In the study, drivers logged miles and temperature for identical routes. The results showed that miles per charge were lower when the morning temperature was lower.

Which choice best states the main idea of the text?

- A) The text's main point is that the logs do not separate highway miles from city miles.
- B) The text is mainly a set of instructions for how to carry out the following procedure: drivers logged miles and temperature for identical routes.
- C) Farid concludes that it is not the case that the same vans traveled fewer miles per charge on cold mornings than on mild ones.
- D) Farid's study supports the claim that the same vans traveled fewer miles per charge on cold mornings than on mild ones.

323. Medium

Dr. Clara Mendes has studied a 1602 coastal chart. Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey.

Which choice best states the main idea of the text?

- A) Mendes concludes that it is not the case that the 1602 chart shows a bay that later surveys place farther west.
- B) Mendes's study supports the claim that the 1602 chart shows a bay that later surveys place farther west.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she overlaid the chart on a nineteenth-century survey of the same coast.
- D) The text's main point is that she did not claim the coastline itself had moved.

324. Medium

Dr. Emily Cho has studied attendance on days when a school garden was used. Cho claims that attendance was higher on days with a scheduled garden lesson than on other days that week. In the study, she compared attendance rolls within the same classrooms. The results showed that fewer students were absent on garden days.

Which choice best states the main idea of the text?

- A) The text's main point is that the rolls do not say whether the garden caused the attendance.
- B) Cho's study supports the claim that attendance was higher on days with a scheduled garden lesson than on other days that week.
- C) Cho concludes that it is not the case that attendance was higher on days with a scheduled garden lesson than on other days that week.
- D) The text is mainly a set of instructions for how to carry out the following procedure: she compared attendance rolls within the same classrooms.

325. Medium

Dr. Lydia Grant has studied a newspaper and a diary from the week of a town fire. Grant claims that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday. In the study, she read both documents side by side. The results showed that the diary's Tuesday entry describes the fire, and the headline says Thursday.

Which choice best states the main idea of the text?

- A) The text's main point is that she does not know which document was written first on the day itself.
- B) Grant's study supports the claim that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she read both documents side by side.
- D) Grant concludes that it is not the case that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday.

326. Medium

Dr. Sara Lind has studied a reading-speed test of two typefaces. Lind claims that the study found no reliable difference in reading speed between the two typefaces. In the study, adults read the same passage in each typeface while being timed. The results showed that average times for the two typefaces were nearly the same.

Which choice best states the main idea of the text?

- A) The text's main point is that the study did not include children.
- B) Lind concludes that it is not the case that the study found no reliable difference in reading speed between the two typefaces.
- C) Lind's study supports the claim that the study found no reliable difference in reading speed between the two typefaces.
- D) The text is mainly a set of instructions for how to carry out the following procedure: adults read the same passage in each typeface while being timed.

327. Medium

Dr. Brian Holt has studied helmet use and head injuries in a city bike-share program. Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet.

Which choice best states the main idea of the text?

- A) Holt's study supports the claim that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational.
- B) The text's main point is that the survey cannot separate the helmet from the other habits of the riders who wear one.
- C) The text is mainly a set of instructions for how to carry out the following procedure: he surveyed riders after trips over one summer.
- D) Holt concludes that it is not the case that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational.

328. Medium

Dr. Margaret Poe has studied salt and dried food in a ship's log. Poe claims that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels. In the study, she tracked remarks about the same barrels across the log. The results showed that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.

Which choice best states the main idea of the text?

- A) The text is mainly a set of instructions for how to carry out the following procedure: she tracked remarks about the same barrels across the log.
- B) Poe's study supports the claim that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels.
- C) Poe concludes that it is not the case that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels.
- D) The text's main point is that the log is not a controlled experiment.

329. Medium

Dr. Charles Ito has studied a nineteenth-century school that restricted sign language. Ito claims that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign. In the study, he compared reports from before and during the restriction. The results showed that the marks in those subjects were lower in the restriction years.

Which choice best states the main idea of the text?

- A) Ito's study supports the claim that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign.
- B) The text's main point is that the reports do not record what families thought of the rule.
- C) Ito concludes that it is not the case that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign.
- D) The text is mainly a set of instructions for how to carry out the following procedure: he compared reports from before and during the restriction.

330. Medium

Dr. Nadia Korol has studied desert varnish on sunlit rocks. Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

Which choice best states the main idea of the text?

- A) Korol's study supports the claim that the varnish is thicker on rocks that stay damp longer after rare rains.
- B) The text is mainly a set of instructions for how to carry out the following procedure: she measured varnish and drying time on rocks in one canyon.
- C) Korol concludes that it is not the case that the varnish is thicker on rocks that stay damp longer after rare rains.
- D) The text's main point is that she did not determine whether microbes or chemistry laid the varnish down.

331. Medium

Dr. Sylvia Markham has studied recipes in an eighteenth-century household book. Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. In the study, she sorted the dated recipes by the season written beside them. The results showed that winter recipes list dried fruit more often and fresh herbs less often.

Which choice best states the main idea of the text?

- A) The text's main point is that the book does not say which recipes were actually cooked.
- B) Markham concludes that it is not the case that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she sorted the dated recipes by the season written beside them.
- D) Markham's study supports the claim that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes.

332. Medium

Dr. Thomas Berger has studied nesting success of a shorebird. Berger claims that nests placed farther from the path were more likely to hatch than nests beside it. In the study, volunteers mapped nests and recorded which ones hatched. The results showed that a larger share of the distant nests hatched.

Which choice best states the main idea of the text?

- A) Berger concludes that it is not the case that nests placed farther from the path were more likely to hatch than nests beside it.
- B) The text's main point is that the volunteers did not band the adult birds.
- C) The text is mainly a set of instructions for how to carry out the following procedure: volunteers mapped nests and recorded which ones hatched.
- D) Berger's study supports the claim that nests placed farther from the path were more likely to hatch than nests beside it.

333. Medium

Dr. William Drake has studied ship manifests and a passenger diary from 1850. Drake claims that the diary names more children in one family than the manifest lists for that surname. In the study, he lined up the surname in both documents. The results showed that the diary lists three children and the manifest lists two.

Which choice best states the main idea of the text?

- A) Drake's study supports the claim that the diary names more children in one family than the manifest lists for that surname.
- B) Drake concludes that it is not the case that the diary names more children in one family than the manifest lists for that surname.
- C) The text's main point is that he cannot tell whether a child was born during the voyage.
- D) The text is mainly a set of instructions for how to carry out the following procedure: he lined up the surname in both documents.

334. Medium

Dr. Felix Nguyen has studied mussels on a rocky shore. Nguyen claims that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day. In the study, he measured mussels at marked heights on the same rock. The results showed that mussels lower down, in the wetter band, were larger.

Which choice best states the main idea of the text?

- A) Nguyen's study supports the claim that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day.
- B) The text's main point is that he did not count the birds that eat mussels.
- C) Nguyen concludes that it is not the case that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day.
- D) The text is mainly a set of instructions for how to carry out the following procedure: he measured mussels at marked heights on the same rock.

335. Medium

Dr. Judith Hale has studied captions in a museum exhibit. Hale claims that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left. In the study, she asked matched groups, one shown the long caption and one shown a short label. The results showed that a larger share of the long-caption group stated the claim accurately.

Which choice best states the main idea of the text?

- A) Hale concludes that it is not the case that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left.
- B) The text is mainly a set of instructions for how to carry out the following procedure: she asked matched groups, one shown the long caption and one shown a short label.
- C) Hale's study supports the claim that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left.
- D) The text's main point is that she did not test whether visitors remembered the claim a week later.

336. Medium

Dr. Eleanor Voss has studied two editions of a political pamphlet from 1792. Voss claims that the second edition softens a sentence that the first edition states as a direct accusation. In the study, she compared the same paragraph in both editions. The results showed that the first edition names a person as responsible, and the second edition says only that mistakes were made.

Which choice best states the main idea of the text?

- A) Voss's study supports the claim that the second edition softens a sentence that the first edition states as a direct accusation.
- B) Voss concludes that it is not the case that the second edition softens a sentence that the first edition states as a direct accusation.
- C) The text is mainly a set of instructions for how to carry out the following procedure: she compared the same paragraph in both editions.
- D) The text's main point is that she does not know how many readers saw each edition.

337. Medium

Dr. Mei Lin has studied bird collisions with glass on a campus building. Lin claims that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall. In the study, staff walked the wall each morning and recorded strikes. The results showed that treated windows had fewer recorded strikes.

Which choice best states the main idea of the text?

- A) The text's main point is that the count does not identify the species in every case.
- B) The text is mainly a set of instructions for how to carry out the following procedure: staff walked the wall each morning and recorded strikes.
- C) Lin concludes that it is not the case that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall.
- D) Lin's study supports the claim that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall.

338. Medium

Dr. George Salim has studied rehearsal recordings of a string quartet. Salim claims that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure. In the study, he counted repetitions in the rehearsal tape and then surveyed listeners of the concert. The results showed that the most repeated passage received the highest security ratings.

Which choice best states the main idea of the text?

- A) Salim's study supports the claim that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure.
- B) The text is mainly a set of instructions for how to carry out the following procedure: he counted repetitions in the rehearsal tape and then surveyed listeners of the concert.
- C) The text's main point is that he did not ask the players which passage they feared.
- D) Salim concludes that it is not the case that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure.

339. Medium

Dr. Laura Kim has studied salt marsh grass and flood height. Kim claims that marshes with denser grass had lower peak water on the landward side during the same tide. In the study, she measured grass density and water height along one creek. The results showed that the denser stretches had lower landward peaks.

Which choice best states the main idea of the text?

- A) Kim's study supports the claim that marshes with denser grass had lower peak water on the landward side during the same tide.
- B) The text is mainly a set of instructions for how to carry out the following procedure: she measured grass density and water height along one creek.
- C) The text's main point is that she did not measure the grass in winter.
- D) Kim concludes that it is not the case that marshes with denser grass had lower peak water on the landward side during the same tide.

340. Medium

Dr. Victor Hume has studied nest boxes facing different directions. Hume claims that boxes facing east were occupied earlier in the spring than boxes facing north on the same fence. In the study, he checked the boxes every morning for a month. The results showed that east-facing boxes held nesting material on earlier dates.

Which choice best states the main idea of the text?

- A) The text's main point is that he did not weigh the birds.
- B) Hume concludes that it is not the case that boxes facing east were occupied earlier in the spring than boxes facing north on the same fence.
- C) Hume's study supports the claim that boxes facing east were occupied earlier in the spring than boxes facing north on the same fence.
- D) The text is mainly a set of instructions for how to carry out the following procedure: he checked the boxes every morning for a month.

Information and Ideas: Command of Evidence (Textual)**341. Medium**

Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish.

Which finding, if true, would most directly support the claim?

- A) The research team included graduate students.
- B) It was not the case that juvenile counts were higher in standing kelp than on bare rock.
- C) The divers did not count adult rockfish.
- D) Juvenile counts were higher in standing kelp than on bare rock.

342. Medium

Dr. Priya Raman claims that blocks with street trees have cooler midafternoon pavement than blocks without them.

Which finding, if true, would most directly support the claim?

- A) She did not measure temperatures inside houses.
- B) Pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- C) It was not the case that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- D) The research team included graduate students.

343. Medium

Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour.

Which finding, if true, would most directly support the claim?

- A) The study did not survey riders' satisfaction.
- B) Afternoon bus trips were shorter after the lane opened than before it.
- C) The research team included graduate students.
- D) It was not the case that afternoon bus trips were shorter after the lane opened than before it.

344. Medium

Dr. Imani Cole claims that rooftop hives in that city hold more bee species than the nearby park.

Which finding, if true, would most directly support the claim?

- A) The rooftop count was higher than the park count.
- B) One year cannot show whether the city is safer for bees over time.
- C) It was not the case that the rooftop count was higher than the park count.
- D) The research team included graduate students.

345. Medium

Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt.

Which finding, if true, would most directly support the claim?

- A) It was not the case that plots with more algae lost more ice that week than plots with less algae.
- B) The research team included graduate students.
- C) Plots with more algae lost more ice that week than plots with less algae.
- D) The team did not compare air temperatures above the plots.

346. Medium

Dr. Grace Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam.

Which finding, if true, would most directly support the claim?

- A) It was not the case that summaries from students who had switched languages scored as high as summaries from students who had not.
- B) The research team included graduate students.
- C) Summaries from students who had switched languages scored as high as summaries from students who had not.
- D) The study did not score spoken answers on the exam.

347. Medium

Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences.

Which finding, if true, would most directly support the claim?

- A) She did not measure how long students actually slept.
- B) The research team included graduate students.
- C) It was not the case that first-period absences fell in the semester after the change.
- D) First-period absences fell in the semester after the change.

348. Medium

Dr. Nora Feldman claims that corals that kept their algal partners kept more of their color than corals that expelled them.

Which finding, if true, would most directly support the claim?

- A) The research team included graduate students.
- B) Colonies that kept their algae stayed darker than colonies that expelled them.
- C) It was not the case that colonies that kept their algae stayed darker than colonies that expelled them.
- D) The divers did not measure fish counts on the reef.

349. Medium

Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not.

Which finding, if true, would most directly support the claim?

- A) A larger share of the loan group was still trading after six months.
- B) The study does not show that every loan was spent on the business.
- C) The research team included graduate students.
- D) It was not the case that a larger share of the loan group was still trading after six months.

350. Medium

Dr. Camille Duval claims that larger canopy cover is associated with cooler surfaces at midday.

Which finding, if true, would most directly support the claim?

- A) Blocks with more canopy had cooler midday surfaces.
- B) It was not the case that blocks with more canopy had cooler midday surfaces.
- C) The research team included graduate students.
- D) The team did not measure winter temperatures.

351. Medium

Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.

Which finding, if true, would most directly support the claim?

- A) The count of new cases was lower in the summer after the clinics.
- B) It was not the case that the count of new cases was lower in the summer after the clinics.
- C) A drop in one county's report does not by itself prove the clinics caused it.
- D) The research team included graduate students.

352. Medium

Dr. Rosa Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned.

Which finding, if true, would most directly support the claim?

- A) She did not measure bird nests in the willows.
- B) Banks with fewer signs of browsing had taller willow seedlings.
- C) The research team included graduate students.
- D) It was not the case that banks with fewer signs of browsing had taller willow seedlings.

353. Medium

Dr. Leo Martins claims that the wetland held floodwater that would otherwise have reached the road.

Which finding, if true, would most directly support the claim?

- A) The gauges were not left in place over the winter.
- B) The wetland depth rose while the road remained dry.
- C) The research team included graduate students.
- D) It was not the case that the wetland depth rose while the road remained dry.

354. Medium

Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does.

Which finding, if true, would most directly support the claim?

- A) He found no letters from the mill owner about the schedule.
- B) The letters name start and end times that add up to more hours than the notice lists.
- C) It was not the case that the letters name start and end times that add up to more hours than the notice lists.
- D) The research team included graduate students.

355. Medium

Dr. Miguel Santos claims that bridge decks grew longer on hot afternoons than on cool mornings.

Which finding, if true, would most directly support the claim?

- A) It was not the case that the gaps at the joints were narrower in the afternoon than at dawn.
- B) The research team included graduate students.
- C) The crews did not measure traffic weight.
- D) The gaps at the joints were narrower in the afternoon than at dawn.

356. Medium

Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement.

Which finding, if true, would most directly support the claim?

- A) The sketches show occupations named in the contracts, such as harvesting and mill work.
- B) It was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.
- C) She did not interview anyone who watched the murals being painted.
- D) The research team included graduate students.

357. Medium

Dr. Karen Ito claims that more overdue books came back in the months after fines ended than in the months before.

Which finding, if true, would most directly support the claim?

- A) It was not the case that returns of overdue books rose after fines ended.
- B) Returns of overdue books rose after fines ended.
- C) Other changes, including longer open hours, happened in the same months.
- D) The research team included graduate students.

358. Medium

Dr. Omar Farid claims that the same vans traveled fewer miles per charge on cold mornings than on mild ones.

Which finding, if true, would most directly support the claim?

- A) Miles per charge were lower when the morning temperature was lower.
- B) The logs do not separate highway miles from city miles.
- C) The research team included graduate students.
- D) It was not the case that miles per charge were lower when the morning temperature was lower.

359. Medium

Dr. Naomi Feldman claims that the two communities tell different stories about the same group of stars.

Which finding, if true, would most directly support the claim?

- A) It was not the case that the named stars match, and the plots of the stories do not.
- B) The named stars match, and the plots of the stories do not.
- C) The research team included graduate students.
- D) She did not claim that one story is older than the other.

360. Medium

Dr. Yara Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge.

Which finding, if true, would most directly support the claim?

- A) It was not the case that fewer seeds sprouted from the hot center than from the cool edge.
- B) She did not test crop seeds that a gardener might want to survive.
- C) Fewer seeds sprouted from the hot center than from the cool edge.
- D) The research team included graduate students.

361. Medium

Dr. Paolo Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them.

Which finding, if true, would most directly support the claim?

- A) It was not the case that the fungi group weighed more at eight weeks.
- B) He did not measure the seedlings' survival through winter.
- C) The fungi group weighed more at eight weeks.
- D) The research team included graduate students.

362. Medium

Dr. Lydia Grant claims that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday.

Which finding, if true, would most directly support the claim?

- A) The diary's Tuesday entry describes the fire, and the headline says Thursday.
- B) She does not know which document was written first on the day itself.
- C) The research team included graduate students.
- D) It was not the case that the diary's Tuesday entry describes the fire, and the headline says Thursday.

363. Medium

Dr. Irene Solano claims that sections painted with the red pigment faded faster in direct sun than sections painted with the earth pigment.

Which finding, if true, would most directly support the claim?

- A) She did not remove any pigment for a laboratory test.
- B) The sunny red sections had lightened more than the sunny earth-colored sections.
- C) The research team included graduate students.
- D) It was not the case that the sunny red sections had lightened more than the sunny earth-colored sections.

364. Medium

Dr. Brian Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational.

Which finding, if true, would most directly support the claim?

- A) The research team included graduate students.
- B) It was not the case that helmeted riders reported fewer head injuries than riders who reported no helmet.
- C) Helmeted riders reported fewer head injuries than riders who reported no helmet.
- D) The survey cannot separate the helmet from the other habits of the riders who wear one.

365. Medium

Dr. Ellen Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought.

Which finding, if true, would most directly support the claim?

- A) It was not the case that the thickest dust layers fell in years the notes call dry.
- B) The research team included graduate students.
- C) The core does not name the source of every grain of dust.
- D) The thickest dust layers fell in years the notes call dry.

366. Medium

Dr. Nadia Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains.

Which finding, if true, would most directly support the claim?

- A) It was not the case that rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- B) She did not determine whether microbes or chemistry laid the varnish down.
- C) Rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- D) The research team included graduate students.

367. Medium

Dr. Rachel Stein claims that clinics that sent a reminder text had fewer missed appointments the next month.

Which finding, if true, would most directly support the claim?

- A) The comparison does not isolate the text from the new evening hour.
- B) The research team included graduate students.
- C) The texting clinics had a lower miss rate.
- D) It was not the case that the texting clinics had a lower miss rate.

368. Medium

Dr. Thomas Berger claims that nests placed farther from the path were more likely to hatch than nests beside it.

Which finding, if true, would most directly support the claim?

- A) The volunteers did not band the adult birds.
- B) It was not the case that a larger share of the distant nests hatched.
- C) The research team included graduate students.
- D) A larger share of the distant nests hatched.

369. Medium

Dr. Angela Brooks claims that loans of the book rose in the month after a public reading and fell again later.

Which finding, if true, would most directly support the claim?

- A) The loan count was higher in the month after the reading than in the month before.
- B) It was not the case that the loan count was higher in the month after the reading than in the month before.
- C) The loan records do not show whether the borrowers attended the reading.
- D) The research team included graduate students.

370. Medium

Dr. William Drake claims that the diary names more children in one family than the manifest lists for that surname.

Which finding, if true, would most directly support the claim?

- A) The diary lists three children and the manifest lists two.
- B) It was not the case that the diary lists three children and the manifest lists two.
- C) He cannot tell whether a child was born during the voyage.
- D) The research team included graduate students.

371. Medium

Dr. Olivia Grant claims that students who attended more tutoring hours scored higher on the quiz given that Friday.

Which finding, if true, would most directly support the claim?

- A) The research team included graduate students.
- B) The log does not show that the tutoring produced the scores.
- C) Higher hours lined up with higher scores.
- D) It was not the case that higher hours lined up with higher scores.

372. Medium

Dr. Judith Hale claims that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left.

Which finding, if true, would most directly support the claim?

- A) It was not the case that a larger share of the long-caption group stated the claim accurately.
- B) The research team included graduate students.
- C) She did not test whether visitors remembered the claim a week later.
- D) A larger share of the long-caption group stated the claim accurately.

373. Medium

Dr. Hassan Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open.

Which finding, if true, would most directly support the claim?

- A) It was not the case that the rows nearest the shrubs lost less soil than the open rows.
- B) The rows nearest the shrubs lost less soil than the open rows.
- C) The research team included graduate students.
- D) He did not measure the crop's yield.

374. Medium

Dr. Mei Lin claims that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall.

Which finding, if true, would most directly support the claim?

- A) The research team included graduate students.
- B) The count does not identify the species in every case.
- C) Treated windows had fewer recorded strikes.
- D) It was not the case that treated windows had fewer recorded strikes.

375. Medium

Dr. Christine Dahl claims that sections kept under fifteen students had higher completion rates than larger sections of the same course.

Which finding, if true, would most directly support the claim?

- A) The smaller sections finished a larger share of students.
- B) The research team included graduate students.
- C) It was not the case that the smaller sections finished a larger share of students.
- D) The comparison does not separate class size from the instructor.

376. Medium

Dr. Laura Kim claims that marshes with denser grass had lower peak water on the landward side during the same tide.

Which finding, if true, would most directly support the claim?

- A) The research team included graduate students.
- B) It was not the case that the denser stretches had lower landward peaks.
- C) The denser stretches had lower landward peaks.
- D) She did not measure the grass in winter.

377. Medium

Dr. Anita Shah claims that the ledger records more sugar sold on days the ledger also notes a card inspection.

Which finding, if true, would most directly support the claim?

- A) It was not the case that sugar sales were higher on the inspection days.
- B) The ledger cannot show that inspectors caused shoppers to buy.
- C) The research team included graduate students.
- D) Sugar sales were higher on the inspection days.

378. Medium

Dr. Monica Reyes claims that households that received the simplified notice were more likely to pay before the deadline.

Which finding, if true, would most directly support the claim?

- A) A larger share of the simplified group paid on time.
- B) The research team included graduate students.
- C) It was not the case that a larger share of the simplified group paid on time.
- D) The study's random assignment still left color and wording changed together.

379. Hard

Dr. Elena Voss claims that standing kelp is associated with higher numbers of juvenile rockfish.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that juvenile counts were higher in standing kelp than on bare rock.
- B) The study was conducted in the area of kelp forests along the California coast.
- C) The research team included graduate students.
- D) Juvenile counts were higher in standing kelp than on bare rock.

380. Hard

Dr. Helen Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) The study was conducted in the area of iron-gall ink on nineteenth-century letters.
- C) The inked lines were often the places where the paper had cracked or fallen out.
- D) It was not the case that the inked lines were often the places where the paper had cracked or fallen out.

381. Hard

Dr. Luis Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) It was not the case that afternoon bus trips were shorter after the lane opened than before it.
- C) The study was conducted in the area of bus trips on Center Avenue.
- D) Afternoon bus trips were shorter after the lane opened than before it.

382. Hard

Dr. Nina Patel claims that a mailed reminder is associated with slightly higher turnout.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) The study was conducted in the area of turnout in a local election.
- C) It was not the case that turnout was higher in the precincts that received the postcard.
- D) Turnout was higher in the precincts that received the postcard.

383. Hard

Dr. Andrei Sokolov claims that darker algae on the ice is associated with faster local melt.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of algae on a melting glacier.
- B) Plots with more algae lost more ice that week than plots with less algae.
- C) The research team included graduate students.
- D) It was not the case that plots with more algae lost more ice that week than plots with less algae.

384. Hard

Dr. Marco Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that fewer shell-tempered pots cracked than sand-tempered pots.
- B) The study was conducted in the area of clay pots from a riverside workshop.
- C) Fewer shell-tempered pots cracked than sand-tempered pots.
- D) The research team included graduate students.

385. Hard

Dr. Joan Ekstrom claims that a later start was associated with fewer first-period absences.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that first-period absences fell in the semester after the change.
- B) First-period absences fell in the semester after the change.
- C) The study was conducted in the area of a high school that moved its start time later.
- D) The research team included graduate students.

386. Hard

Dr. Ruth Adelman claims that cylinders stored in stable cool rooms retained more audible speech than cylinders stored in attics.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that more words were intelligible on the cool-room cylinders than on the attic cylinders.
- B) More words were intelligible on the cool-room cylinders than on the attic cylinders.
- C) The study was conducted in the area of wax-cylinder recordings from the 1890s.
- D) The research team included graduate students.

387. Hard

Dr. Fatima Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not.

Which finding, if true, would most directly weaken the claim?

- A) A larger share of the loan group was still trading after six months.
- B) The study was conducted in the area of small loans to market vendors.
- C) The research team included graduate students.
- D) It was not the case that a larger share of the loan group was still trading after six months.

388. Hard

Dr. Alice Peng claims that the director cut a scene in order to keep the running time under two hours. Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of rehearsal notes for a 1936 production.
- B) It was not the case that the cut scene was the one marked 'too long' in the director's hand.
- C) The research team included graduate students.
- D) The cut scene was the one marked 'too long' in the director's hand.

389. Hard

Dr. Edith Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) The count of new cases was lower in the summer after the clinics.
- C) The study was conducted in the area of county health reports from 1957.
- D) It was not the case that the count of new cases was lower in the summer after the clinics.

390. Hard

Dr. Hannah Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of homework hours and quiz scores in one course.
- B) The research team included graduate students.
- C) Students with more reported hours had higher scores on average.
- D) It was not the case that students with more reported hours had higher scores on average.

391. Hard

Dr. Patrick Doyle claims that letters from workers describe longer hours than the company's posted notice does.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that the letters name start and end times that add up to more hours than the notice lists.
- B) The research team included graduate students.
- C) The study was conducted in the area of a mill town in the 1840s.
- D) The letters name start and end times that add up to more hours than the notice lists.

392. Hard

Dr. Sophie Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same.

Which finding, if true, would most directly weaken the claim?

- A) Readers rated the passive versions as more certain.
- B) It was not the case that readers rated the passive versions as more certain.
- C) The research team included graduate students.
- D) The study was conducted in the area of passive voice in lab reports.

393. Hard

Dr. June Harlow claims that the contracts required the murals to show local work, and the surviving sketches match that requirement.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) The sketches show occupations named in the contracts, such as harvesting and mill work.
- C) The study was conducted in the area of murals painted for public buildings in the 1930s.
- D) It was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.

394. Hard

Dr. Tanya Brooks claims that no-till fields lost less soil in heavy rain than plowed fields beside them.

Which finding, if true, would most directly weaken the claim?

- A) Less soil was caught below the no-till fields.
- B) It was not the case that less soil was caught below the no-till fields.
- C) The research team included graduate students.
- D) The study was conducted in the area of fields farmed without plowing.

395. Hard

Dr. Omar Farid claims that the same vans traveled fewer miles per charge on cold mornings than on mild ones.

Which finding, if true, would most directly weaken the claim?

- A) Miles per charge were lower when the morning temperature was lower.
- B) It was not the case that miles per charge were lower when the morning temperature was lower.
- C) The research team included graduate students.
- D) The study was conducted in the area of range of electric delivery vans in cold weather.

396. Hard

Dr. Clara Mendes claims that the 1602 chart shows a bay that later surveys place farther west.

Which finding, if true, would most directly weaken the claim?

- A) The bay drawn in 1602 sits east of the bay on the later survey.
- B) It was not the case that the bay drawn in 1602 sits east of the bay on the later survey.
- C) The research team included graduate students.
- D) The study was conducted in the area of a 1602 coastal chart.

397. Hard

Dr. Yara Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) It was not the case that fewer seeds sprouted from the hot center than from the cool edge.
- C) Fewer seeds sprouted from the hot center than from the cool edge.
- D) The study was conducted in the area of compost piles and weed seeds.

398. Hard

Dr. Emily Cho claims that attendance was higher on days with a scheduled garden lesson than on other days that week.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of attendance on days when a school garden was used.
- B) It was not the case that fewer students were absent on garden days.
- C) Fewer students were absent on garden days.
- D) The research team included graduate students.

399. Hard

Dr. Lydia Grant claims that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of a newspaper and a diary from the week of a town fire.
- B) The research team included graduate students.
- C) The diary's Tuesday entry describes the fire, and the headline says Thursday.
- D) It was not the case that the diary's Tuesday entry describes the fire, and the headline says Thursday.

400. Hard

Dr. Sara Lind claims that the study found no reliable difference in reading speed between the two typefaces.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of a reading-speed test of two typefaces.
- B) It was not the case that average times for the two typefaces were nearly the same.
- C) Average times for the two typefaces were nearly the same.
- D) The research team included graduate students.

401. Hard

Dr. Brian Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of helmet use and head injuries in a city bike-share program.
- B) Helmeted riders reported fewer head injuries than riders who reported no helmet.
- C) The research team included graduate students.
- D) It was not the case that helmeted riders reported fewer head injuries than riders who reported no helmet.

402. Hard

Dr. Margaret Poe claims that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.
- B) The research team included graduate students.
- C) The heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.
- D) The study was conducted in the area of salt and dried food in a ship's log.

403. Hard

Dr. Charles Ito claims that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of a nineteenth-century school that restricted sign language.
- B) The research team included graduate students.
- C) It was not the case that the marks in those subjects were lower in the restriction years.
- D) The marks in those subjects were lower in the restriction years.

404. Hard

Dr. Nadia Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- B) The study was conducted in the area of desert varnish on sunlit rocks.
- C) Rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- D) The research team included graduate students.

405. Hard

Dr. Sylvia Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) It was not the case that winter recipes list dried fruit more often and fresh herbs less often.
- C) Winter recipes list dried fruit more often and fresh herbs less often.
- D) The study was conducted in the area of recipes in an eighteenth-century household book.

406. Hard

Dr. Thomas Berger claims that nests placed farther from the path were more likely to hatch than nests beside it.

Which finding, if true, would most directly weaken the claim?

- A) A larger share of the distant nests hatched.
- B) The research team included graduate students.
- C) The study was conducted in the area of nesting success of a shorebird.
- D) It was not the case that a larger share of the distant nests hatched.

407. Hard

Dr. Ingrid Solberg claims that batteries stored half charged held more of their capacity after six months than batteries stored fully charged.

Which finding, if true, would most directly weaken the claim?

- A) The half-charged batteries lost less capacity.
- B) The research team included graduate students.
- C) The study was conducted in the area of batteries stored at different states of charge.
- D) It was not the case that the half-charged batteries lost less capacity.

408. Hard

Dr. William Drake claims that the diary names more children in one family than the manifest lists for that surname.

Which finding, if true, would most directly weaken the claim?

- A) The research team included graduate students.
- B) The diary lists three children and the manifest lists two.
- C) The study was conducted in the area of ship manifests and a passenger diary from 1850.
- D) It was not the case that the diary lists three children and the manifest lists two.

409. Hard

Dr. Felix Nguyen claims that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of mussels on a rocky shore.
- B) It was not the case that mussels lower down, in the wetter band, were larger.
- C) The research team included graduate students.
- D) Mussels lower down, in the wetter band, were larger.

410. Hard

Dr. Judith Hale claims that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of captions in a museum exhibit.
- B) A larger share of the long-caption group stated the claim accurately.
- C) It was not the case that a larger share of the long-caption group stated the claim accurately.
- D) The research team included graduate students.

411. Hard

Dr. Eleanor Voss claims that the second edition softens a sentence that the first edition states as a direct accusation.

Which finding, if true, would most directly weaken the claim?

- A) The first edition names a person as responsible, and the second edition says only that mistakes were made.
- B) The research team included graduate students.
- C) It was not the case that the first edition names a person as responsible, and the second edition says only that mistakes were made.
- D) The study was conducted in the area of two editions of a political pamphlet from 1792.

412. Hard

Dr. Mei Lin claims that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of bird collisions with glass on a campus building.
- B) It was not the case that treated windows had fewer recorded strikes.
- C) Treated windows had fewer recorded strikes.
- D) The research team included graduate students.

413. Hard

Dr. George Salim claims that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that the most repeated passage received the highest security ratings.
- B) The study was conducted in the area of rehearsal recordings of a string quartet.
- C) The most repeated passage received the highest security ratings.
- D) The research team included graduate students.

414. Hard

Dr. Laura Kim claims that marshes with denser grass had lower peak water on the landward side during the same tide.

Which finding, if true, would most directly weaken the claim?

- A) It was not the case that the denser stretches had lower landward peaks.
- B) The denser stretches had lower landward peaks.
- C) The study was conducted in the area of salt marsh grass and flood height.
- D) The research team included graduate students.

415. Hard

Dr. Victor Hume claims that boxes facing east were occupied earlier in the spring than boxes facing north on the same fence.

Which finding, if true, would most directly weaken the claim?

- A) The study was conducted in the area of nest boxes facing different directions.
- B) East-facing boxes held nesting material on earlier dates.
- C) It was not the case that east-facing boxes held nesting material on earlier dates.
- D) The research team included graduate students.

Information and Ideas: Command of Evidence (Quantitative)**416. Easy**

A student claims that students who slept more would have higher mean quiz scores.

Mean quiz score by hours of sleep the night before	
hours of sleep the night before	Mean quiz score
6 hours	15
7 hours	18
8 hours	21
9 hours	24

Which choice most effectively uses data from the table to support the student's claim?

- A) 6 hours shows a higher value (15 points) than 9 hours (24 points).
- B) 7 hours and 8 hours show the same value.
- C) 9 hours shows a higher value (24 points) than 6 hours (15 points).
- D) 9 hours shows a value of 15 points.

417. Easy

A student claims that longer distances would come with longer mean commutes.

Mean commute by distance from campus	
distance from campus	Mean commute
under 1 mile	15
1 to 3 miles	18
3 to 6 miles	21
over 6 miles	24

Which choice most effectively uses data from the table to support the student's claim?

- A) 1 to 3 miles and 3 to 6 miles show the same value.
- B) under 1 mile shows a higher value (15 minutes) than over 6 miles (24 minutes).
- C) over 6 miles shows a higher value (24 minutes) than under 1 mile (15 minutes).
- D) over 6 miles shows a value of 15 minutes.

418. Easy

A student claims that a warmer daytime temperature would come with a higher percent sprouted.

Seedlings sprouted by daytime temperature	
daytime temperature	Seedlings sprouted
15 C	15
20 C	18
25 C	21
30 C	24

Which choice most effectively uses data from the table to support the student's claim?

- A) 30 C shows a value of 15 percent.
- B) 20 C and 25 C show the same value.
- C) 30 C shows a higher value (24 percent) than 15 C (15 percent).
- D) 15 C shows a higher value (15 percent) than 30 C (24 percent).

419. Easy

A student claims that returns would rise across the four weeks.

Books returned by week after fines ended	
week after fines ended	Books returned
week 1	15
week 2	18
week 3	21
week 4	24

Which choice most effectively uses data from the table to support the student's claim?

- A) week 1 shows a higher value (15 number) than week 4 (24 number).
- B) week 2 and week 3 show the same value.
- C) week 4 shows a higher value (24 number) than week 1 (15 number).
- D) week 4 shows a value of 15 number.

420. Easy

A student claims that warmer mornings would come with more miles of range.

Battery range by morning temperature	
morning temperature	Battery range
-5 C	15
5 C	18
15 C	21
25 C	24

Which choice most effectively uses data from the table to support the student's claim?

- A) 5 C and 15 C show the same value.
- B) -5 C shows a higher value (15 miles) than 25 C (24 miles).
- C) 25 C shows a value of 15 miles.
- D) 25 C shows a higher value (24 miles) than -5 C (15 miles).

421. Easy

A student claims that more canopy would come with less soil caught below the field.

Soil caught by canopy cover	
canopy cover	Soil caught
10 percent	49
25 percent	46
40 percent	43
60 percent	40

Which choice most effectively uses data from the table to support the student's claim?

- A) 60 percent shows a value of 49 grams.
- B) 60 percent shows a lower value (40 grams) than 10 percent (49 grams).
- C) 10 percent shows a lower value (49 grams) than 60 percent (40 grams).
- D) 25 percent and 40 percent show the same value.

422. Easy

A student claims that recall would be lower after more time had passed.

Words recalled by hours after reading	
hours after reading	Words recalled
1 hour	49
4 hours	46
1 day	43
1 week	40

Which choice most effectively uses data from the table to support the student's claim?

- A) 4 hours and 1 day show the same value.
- B) 1 hour shows a lower value (49 number) than 1 week (40 number).
- C) 1 week shows a lower value (40 number) than 1 hour (49 number).
- D) 1 week shows a value of 49 number.

423. Easy

A student claims that trip times would fall across the four months.

Bus trip time by month after the lane opened	
month after the lane opened	Bus trip time
month 1	49
month 2	46
month 3	43
month 4	40

Which choice most effectively uses data from the table to support the student's claim?

- A) month 2 and month 3 show the same value.
- B) month 4 shows a value of 49 minutes.
- C) month 1 shows a lower value (49 minutes) than month 4 (40 minutes).
- D) month 4 shows a lower value (40 minutes) than month 1 (49 minutes).

424. Easy

A student claims that algae cover would fall across the four weeks.

Algae cover by weeks since the heat wave	
weeks since the heat wave	Algae cover
week 1	49
week 2	46
week 3	43
week 4	40

Which choice most effectively uses data from the table to support the student's claim?

- A) week 4 shows a value of 49 percent.
- B) week 1 shows a lower value (49 percent) than week 4 (40 percent).
- C) week 2 and week 3 show the same value.
- D) week 4 shows a lower value (40 percent) than week 1 (49 percent).

425. Easy

A student claims that a later start would come with higher attendance.

Attendance by start time	
start time	Attendance
7:15	15
7:45	18
8:15	21
8:45	24

Which choice most effectively uses data from the table to support the student's claim?

- A) 7:15 shows a higher value (15 percent) than 8:45 (24 percent).
- B) 7:45 and 8:15 show the same value.
- C) 8:45 shows a higher value (24 percent) than 7:15 (15 percent).
- D) 8:45 shows a value of 15 percent.

426. Easy

A student claims that more shell temper would come with a lower percent of cracked pots.

Cracked pots by shell temper added	
shell temper added	Cracked pots
none	49
5 percent	46
10 percent	43
15 percent	40

Which choice most effectively uses data from the table to support the student's claim?

- A) 15 percent shows a value of 49 percent.
- B) none shows a lower value (49 percent) than 15 percent (40 percent).
- C) 5 percent and 10 percent show the same value.
- D) 15 percent shows a lower value (40 percent) than none (49 percent).

427. Easy

A student claims that longer captions would come with more minutes spent at the case.

Visitor time by caption length	
caption length	Visitor time
10 words	15
25 words	18
50 words	21
80 words	24

Which choice most effectively uses data from the table to support the student's claim?

- A) 80 words shows a higher value (24 minutes) than 10 words (15 minutes).
- B) 25 words and 50 words show the same value.
- C) 10 words shows a higher value (15 minutes) than 80 words (24 minutes).
- D) 80 words shows a value of 15 minutes.

428. Medium

A student claims that students who slept more would have higher mean quiz scores.

Mean quiz score by hours of sleep the night before	
hours of sleep the night before	Mean quiz score
6 hours	23
7 hours	28
8 hours	33
9 hours	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 9 hours shows a higher value (38 points) than 6 hours (23 points).
- B) 7 hours and 8 hours show the same value.
- C) 6 hours shows a higher value (23 points) than 9 hours (38 points).
- D) 9 hours shows a value of 23 points.

429. Medium

A student claims that students who slept more would have higher mean quiz scores.

Mean quiz score by hours of sleep the night before	
hours of sleep the night before	Mean quiz score
6 hours	11
7 hours	15
8 hours	19
9 hours	23

Which choice most effectively uses data from the table to support the student's claim?

- A) 6 hours shows a higher value (11 points) than 9 hours (23 points).
- B) 9 hours shows a higher value (23 points) than 6 hours (11 points).
- C) 9 hours shows a value of 11 points.
- D) 7 hours and 8 hours show the same value.

430. Medium

A student claims that longer distances would come with longer mean commutes.

Mean commute by distance from campus	
distance from campus	Mean commute
under 1 mile	11
1 to 3 miles	15
3 to 6 miles	19
over 6 miles	23

Which choice most effectively uses data from the table to support the student's claim?

- A) 1 to 3 miles and 3 to 6 miles show the same value.
- B) over 6 miles shows a higher value (23 minutes) than under 1 mile (11 minutes).
- C) under 1 mile shows a higher value (11 minutes) than over 6 miles (23 minutes).
- D) over 6 miles shows a value of 11 minutes.

431. Medium

A student claims that a warmer daytime temperature would come with a higher percent sprouted.

Seedlings sprouted by daytime temperature	
daytime temperature	Seedlings sprouted
15 C	23
20 C	28
25 C	33
30 C	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 20 C and 25 C show the same value.
- B) 15 C shows a higher value (23 percent) than 30 C (38 percent).
- C) 30 C shows a higher value (38 percent) than 15 C (23 percent).
- D) 30 C shows a value of 23 percent.

432. Medium

A student claims that a warmer daytime temperature would come with a higher percent sprouted.

Seedlings sprouted by daytime temperature	
daytime temperature	Seedlings sprouted
15 C	11
20 C	15
25 C	19
30 C	23

Which choice most effectively uses data from the table to support the student's claim?

- A) 15 C shows a higher value (11 percent) than 30 C (23 percent).
- B) 30 C shows a higher value (23 percent) than 15 C (11 percent).
- C) 30 C shows a value of 11 percent.
- D) 20 C and 25 C show the same value.

433. Medium

A student claims that returns would rise across the four weeks.

Books returned by week after fines ended	
week after fines ended	Books returned
week 1	23
week 2	28
week 3	33
week 4	38

Which choice most effectively uses data from the table to support the student's claim?

- A) week 4 shows a higher value (38 number) than week 1 (23 number).
- B) week 2 and week 3 show the same value.
- C) week 4 shows a value of 23 number.
- D) week 1 shows a higher value (23 number) than week 4 (38 number).

434. Medium

A student claims that hotter afternoons would come with narrower joint gaps.

Bridge gap by afternoon temperature	
afternoon temperature	Bridge gap
10 C	53
20 C	48
30 C	43
35 C	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 10 C shows a lower value (53 millimeters) than 35 C (38 millimeters).
- B) 20 C and 30 C show the same value.
- C) 35 C shows a lower value (38 millimeters) than 10 C (53 millimeters).
- D) 35 C shows a value of 53 millimeters.

435. Medium

A student claims that hotter afternoons would come with narrower joint gaps.

Bridge gap by afternoon temperature	
afternoon temperature	Bridge gap
10 C	43
20 C	39
30 C	35
35 C	31

Which choice most effectively uses data from the table to support the student's claim?

- A) 10 C shows a lower value (43 millimeters) than 35 C (31 millimeters).
- B) 20 C and 30 C show the same value.
- C) 35 C shows a value of 43 millimeters.
- D) 35 C shows a lower value (31 millimeters) than 10 C (43 millimeters).

436. Medium

A student claims that warmer mornings would come with more miles of range.

Battery range by morning temperature	
morning temperature	Battery range
-5 C	23
5 C	28
15 C	33
25 C	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 5 C and 15 C show the same value.
- B) 25 C shows a value of 23 miles.
- C) -5 C shows a higher value (23 miles) than 25 C (38 miles).
- D) 25 C shows a higher value (38 miles) than -5 C (23 miles).

437. Medium

A student claims that more canopy would come with less soil caught below the field.

Soil caught by canopy cover	
canopy cover	Soil caught
10 percent	53
25 percent	48
40 percent	43
60 percent	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 60 percent shows a value of 53 grams.
- B) 10 percent shows a lower value (53 grams) than 60 percent (38 grams).
- C) 60 percent shows a lower value (38 grams) than 10 percent (53 grams).
- D) 25 percent and 40 percent show the same value.

438. Medium

A student claims that more canopy would come with less soil caught below the field.

Soil caught by canopy cover	
canopy cover	Soil caught
10 percent	43
25 percent	39
40 percent	35
60 percent	31

Which choice most effectively uses data from the table to support the student's claim?

- A) 60 percent shows a lower value (31 grams) than 10 percent (43 grams).
- B) 25 percent and 40 percent show the same value.
- C) 10 percent shows a lower value (43 grams) than 60 percent (31 grams).
- D) 60 percent shows a value of 43 grams.

439. Medium

A student claims that recall would be lower after more time had passed.

Words recalled by hours after reading	
hours after reading	Words recalled
1 hour	53
4 hours	48
1 day	43
1 week	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 1 hour shows a lower value (53 number) than 1 week (38 number).
- B) 4 hours and 1 day show the same value.
- C) 1 week shows a value of 53 number.
- D) 1 week shows a lower value (38 number) than 1 hour (53 number).

440. Medium

A student claims that recall would be lower after more time had passed.

Words recalled by hours after reading	
hours after reading	Words recalled
1 hour	43
4 hours	39
1 day	35
1 week	31

Which choice most effectively uses data from the table to support the student's claim?

- A) 4 hours and 1 day show the same value.
- B) 1 week shows a value of 43 number.
- C) 1 week shows a lower value (31 number) than 1 hour (43 number).
- D) 1 hour shows a lower value (43 number) than 1 week (31 number).

441. Medium

A student claims that higher boxes would be occupied less often.

Nest boxes occupied by height of the box	
height of the box	Nest boxes occupied
1 meter	43
2 meters	39
3 meters	35
4 meters	31

Which choice most effectively uses data from the table to support the student's claim?

- A) 4 meters shows a lower value (31 percent) than 1 meter (43 percent).
- B) 2 meters and 3 meters show the same value.
- C) 4 meters shows a value of 43 percent.
- D) 1 meter shows a lower value (43 percent) than 4 meters (31 percent).

442. Medium

A student claims that trip times would fall across the four months.

Bus trip time by month after the lane opened	
month after the lane opened	Bus trip time
month 1	53
month 2	48
month 3	43
month 4	38

Which choice most effectively uses data from the table to support the student's claim?

- A) month 4 shows a lower value (38 minutes) than month 1 (53 minutes).
- B) month 4 shows a value of 53 minutes.
- C) month 1 shows a lower value (53 minutes) than month 4 (38 minutes).
- D) month 2 and month 3 show the same value.

443. Medium

A student claims that trip times would fall across the four months.

Bus trip time by month after the lane opened	
month after the lane opened	Bus trip time
month 1	43
month 2	39
month 3	35
month 4	31

Which choice most effectively uses data from the table to support the student's claim?

- A) month 1 shows a lower value (43 minutes) than month 4 (31 minutes).
- B) month 2 and month 3 show the same value.
- C) month 4 shows a value of 43 minutes.
- D) month 4 shows a lower value (31 minutes) than month 1 (43 minutes).

444. Medium

A student claims that algae cover would fall across the four weeks.

Algae cover by weeks since the heat wave	
weeks since the heat wave	Algae cover
week 1	43
week 2	39
week 3	35
week 4	31

Which choice most effectively uses data from the table to support the student's claim?

- A) week 4 shows a lower value (31 percent) than week 1 (43 percent).
- B) week 2 and week 3 show the same value.
- C) week 4 shows a value of 43 percent.
- D) week 1 shows a lower value (43 percent) than week 4 (31 percent).

445. Medium

A student claims that a later start would come with higher attendance.

Attendance by start time	
start time	Attendance
7:15	23
7:45	28
8:15	33
8:45	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 7:45 and 8:15 show the same value.
- B) 8:45 shows a higher value (38 percent) than 7:15 (23 percent).
- C) 8:45 shows a value of 23 percent.
- D) 7:15 shows a higher value (23 percent) than 8:45 (38 percent).

446. Medium

A student claims that a later start would come with higher attendance.

Attendance by start time	
start time	Attendance
7:15	11
7:45	15
8:15	19
8:45	23

Which choice most effectively uses data from the table to support the student's claim?

- A) 8:45 shows a value of 11 percent.
- B) 7:45 and 8:15 show the same value.
- C) 7:15 shows a higher value (11 percent) than 8:45 (23 percent).
- D) 8:45 shows a higher value (23 percent) than 7:15 (11 percent).

447. Medium

A student claims that more shell temper would come with a lower percent of cracked pots.

Cracked pots by shell temper added	
shell temper added	Cracked pots
none	53
5 percent	48
10 percent	43
15 percent	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 15 percent shows a value of 53 percent.
- B) 15 percent shows a lower value (38 percent) than none (53 percent).
- C) 5 percent and 10 percent show the same value.
- D) none shows a lower value (53 percent) than 15 percent (38 percent).

448. Medium

A student claims that older letters would show more tears along the ink.

Page tears by age of the iron-gall letters	
age of the iron-gall letters	Page tears
20 years	23
50 years	28
80 years	33
120 years	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 50 years and 80 years show the same value.
- B) 120 years shows a value of 23 number.
- C) 120 years shows a higher value (38 number) than 20 years (23 number).
- D) 20 years shows a higher value (23 number) than 120 years (38 number).

449. Medium

A student claims that older letters would show more tears along the ink.

Page tears by age of the iron-gall letters	
age of the iron-gall letters	Page tears
20 years	11
50 years	15
80 years	19
120 years	23

Which choice most effectively uses data from the table to support the student's claim?

- A) 120 years shows a higher value (23 number) than 20 years (11 number).
- B) 50 years and 80 years show the same value.
- C) 120 years shows a value of 11 number.
- D) 20 years shows a higher value (11 number) than 120 years (23 number).

450. Medium

A student claims that longer captions would come with more minutes spent at the case.

Visitor time by caption length	
caption length	Visitor time
10 words	23
25 words	28
50 words	33
80 words	38

Which choice most effectively uses data from the table to support the student's claim?

- A) 10 words shows a higher value (23 minutes) than 80 words (38 minutes).
- B) 80 words shows a value of 23 minutes.
- C) 25 words and 50 words show the same value.
- D) 80 words shows a higher value (38 minutes) than 10 words (23 minutes).

451. Hard

A student claims that the mean quiz score rose at every step from 6 hours to 9 hours.

Mean quiz score by hours of sleep the night before	
hours of sleep the night before	Mean quiz score
6 hours	15
7 hours	18
8 hours	13
9 hours	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 8 hours is lower (13 points) than 7 hours (18 points).
- B) 9 hours is higher (24 points) than 6 hours (15 points).
- C) 9 hours is lower (24 points) than 6 hours (15 points).
- D) 7 hours is lower (18 points) than 6 hours (15 points).

452. Hard

A student claims that the mean quiz score rose at every step from 6 hours to 9 hours.

Mean quiz score by hours of sleep the night before	
hours of sleep the night before	Mean quiz score
6 hours	23
7 hours	28
8 hours	24
9 hours	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 7 hours is lower (28 points) than 6 hours (23 points).
- B) 9 hours is lower (38 points) than 6 hours (23 points).
- C) 9 hours is higher (38 points) than 6 hours (23 points).
- D) 8 hours is lower (24 points) than 7 hours (28 points).

453. Hard

A student claims that the mean quiz score rose at every step from 6 hours to 9 hours.

Mean quiz score by hours of sleep the night before	
hours of sleep the night before	Mean quiz score
6 hours	11
7 hours	15
8 hours	9
9 hours	23

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 9 hours is lower (23 points) than 6 hours (11 points).
- B) 8 hours is lower (9 points) than 7 hours (15 points).
- C) 9 hours is higher (23 points) than 6 hours (11 points).
- D) 7 hours is lower (15 points) than 6 hours (11 points).

454. Hard

A student claims that the mean commute rose at every step from under 1 mile to over 6 miles.

Mean commute by distance from campus	
distance from campus	Mean commute
under 1 mile	15
1 to 3 miles	18
3 to 6 miles	13
over 6 miles	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 1 to 3 miles is lower (18 minutes) than under 1 mile (15 minutes).
- B) over 6 miles is higher (24 minutes) than under 1 mile (15 minutes).
- C) over 6 miles is lower (24 minutes) than under 1 mile (15 minutes).
- D) 3 to 6 miles is lower (13 minutes) than 1 to 3 miles (18 minutes).

455. Hard

A student claims that the mean commute rose at every step from under 1 mile to over 6 miles.

Mean commute by distance from campus	
distance from campus	Mean commute
under 1 mile	11
1 to 3 miles	15
3 to 6 miles	9
over 6 miles	23

Which choice most effectively uses data from the table to challenge the student's claim?

- A) over 6 miles is lower (23 minutes) than under 1 mile (11 minutes).
- B) 1 to 3 miles is lower (15 minutes) than under 1 mile (11 minutes).
- C) 3 to 6 miles is lower (9 minutes) than 1 to 3 miles (15 minutes).
- D) over 6 miles is higher (23 minutes) than under 1 mile (11 minutes).

456. Hard

A student claims that the seedlings sprouted rose at every step from 15 C to 30 C.

Seedlings sprouted by daytime temperature	
daytime temperature	Seedlings sprouted
15 C	15
20 C	18
25 C	13
30 C	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 30 C is higher (24 percent) than 15 C (15 percent).
- B) 30 C is lower (24 percent) than 15 C (15 percent).
- C) 20 C is lower (18 percent) than 15 C (15 percent).
- D) 25 C is lower (13 percent) than 20 C (18 percent).

457. Hard

A student claims that the seedlings sprouted rose at every step from 15 C to 30 C.

Seedlings sprouted by daytime temperature	
daytime temperature	Seedlings sprouted
15 C	23
20 C	28
25 C	24
30 C	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 30 C is lower (38 percent) than 15 C (23 percent).
- B) 20 C is lower (28 percent) than 15 C (23 percent).
- C) 30 C is higher (38 percent) than 15 C (23 percent).
- D) 25 C is lower (24 percent) than 20 C (28 percent).

458. Hard

A student claims that the books returned rose at every step from week 1 to week 4.

Books returned by week after fines ended	
week after fines ended	Books returned
week 1	15
week 2	18
week 3	13
week 4	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) week 2 is lower (18 number) than week 1 (15 number).
- B) week 4 is lower (24 number) than week 1 (15 number).
- C) week 3 is lower (13 number) than week 2 (18 number).
- D) week 4 is higher (24 number) than week 1 (15 number).

459. Hard

A student claims that the books returned rose at every step from week 1 to week 4.

Books returned by week after fines ended	
week after fines ended	Books returned
week 1	23
week 2	28
week 3	24
week 4	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) week 2 is lower (28 number) than week 1 (23 number).
- B) week 4 is higher (38 number) than week 1 (23 number).
- C) week 4 is lower (38 number) than week 1 (23 number).
- D) week 3 is lower (24 number) than week 2 (28 number).

460. Hard

A student claims that the books returned rose at every step from week 1 to week 4.

Books returned by week after fines ended	
week after fines ended	Books returned
week 1	11
week 2	15
week 3	9
week 4	23

Which choice most effectively uses data from the table to challenge the student's claim?

- A) week 4 is higher (23 number) than week 1 (11 number).
- B) week 4 is lower (23 number) than week 1 (11 number).
- C) week 3 is lower (9 number) than week 2 (15 number).
- D) week 2 is lower (15 number) than week 1 (11 number).

461. Hard

A student claims that the bridge gap fell at every step from 10 C to 35 C.

Bridge gap by afternoon temperature	
afternoon temperature	Bridge gap
10 C	49
20 C	46
30 C	51
35 C	40

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 35 C is lower (40 millimeters) than 10 C (49 millimeters).
- B) 35 C is higher (40 millimeters) than 10 C (49 millimeters).
- C) 30 C is higher (51 millimeters) than 20 C (46 millimeters).
- D) 20 C is higher (46 millimeters) than 10 C (49 millimeters).

462. Hard

A student claims that the bridge gap fell at every step from 10 C to 35 C.

Bridge gap by afternoon temperature	
afternoon temperature	Bridge gap
10 C	43
20 C	39
30 C	45
35 C	31

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 35 C is lower (31 millimeters) than 10 C (43 millimeters).
- B) 20 C is higher (39 millimeters) than 10 C (43 millimeters).
- C) 35 C is higher (31 millimeters) than 10 C (43 millimeters).
- D) 30 C is higher (45 millimeters) than 20 C (39 millimeters).

463. Hard

A student claims that the battery range rose at every step from -5 C to 25 C.

Battery range by morning temperature	
morning temperature	Battery range
-5 C	15
5 C	18
15 C	13
25 C	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 5 C is lower (18 miles) than -5 C (15 miles).
- B) 25 C is higher (24 miles) than -5 C (15 miles).
- C) 15 C is lower (13 miles) than 5 C (18 miles).
- D) 25 C is lower (24 miles) than -5 C (15 miles).

464. Hard

A student claims that the battery range rose at every step from -5 C to 25 C.

Battery range by morning temperature	
morning temperature	Battery range
-5 C	23
5 C	28
15 C	24
25 C	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 15 C is lower (24 miles) than 5 C (28 miles).
- B) 25 C is higher (38 miles) than -5 C (23 miles).
- C) 5 C is lower (28 miles) than -5 C (23 miles).
- D) 25 C is lower (38 miles) than -5 C (23 miles).

465. Hard

A student claims that the soil caught fell at every step from 10 percent to 60 percent.

Soil caught by canopy cover	
canopy cover	Soil caught
10 percent	49
25 percent	46
40 percent	51
60 percent	40

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 25 percent is higher (46 grams) than 10 percent (49 grams).
- B) 60 percent is higher (40 grams) than 10 percent (49 grams).
- C) 40 percent is higher (51 grams) than 25 percent (46 grams).
- D) 60 percent is lower (40 grams) than 10 percent (49 grams).

466. Hard

A student claims that the soil caught fell at every step from 10 percent to 60 percent.

Soil caught by canopy cover	
canopy cover	Soil caught
10 percent	53
25 percent	48
40 percent	52
60 percent	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 40 percent is higher (52 grams) than 25 percent (48 grams).
- B) 25 percent is higher (48 grams) than 10 percent (53 grams).
- C) 60 percent is higher (38 grams) than 10 percent (53 grams).
- D) 60 percent is lower (38 grams) than 10 percent (53 grams).

467. Hard

A student claims that the soil caught fell at every step from 10 percent to 60 percent.

Soil caught by canopy cover	
canopy cover	Soil caught
10 percent	43
25 percent	39
40 percent	45
60 percent	31

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 25 percent is higher (39 grams) than 10 percent (43 grams).
- B) 40 percent is higher (45 grams) than 25 percent (39 grams).
- C) 60 percent is higher (31 grams) than 10 percent (43 grams).
- D) 60 percent is lower (31 grams) than 10 percent (43 grams).

468. Hard

A student claims that the words recalled fell at every step from 1 hour to 1 week.

Words recalled by hours after reading	
hours after reading	Words recalled
1 hour	49
4 hours	46
1 day	51
1 week	40

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 4 hours is higher (46 number) than 1 hour (49 number).
- B) 1 week is higher (40 number) than 1 hour (49 number).
- C) 1 day is higher (51 number) than 4 hours (46 number).
- D) 1 week is lower (40 number) than 1 hour (49 number).

469. Hard

A student claims that the words recalled fell at every step from 1 hour to 1 week.

Words recalled by hours after reading	
hours after reading	Words recalled
1 hour	43
4 hours	39
1 day	45
1 week	31

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 1 week is higher (31 number) than 1 hour (43 number).
- B) 1 day is higher (45 number) than 4 hours (39 number).
- C) 4 hours is higher (39 number) than 1 hour (43 number).
- D) 1 week is lower (31 number) than 1 hour (43 number).

470. Hard

A student claims that the nest boxes occupied fell at every step from 1 meter to 4 meters.

Nest boxes occupied by height of the box	
height of the box	Nest boxes occupied
1 meter	49
2 meters	46
3 meters	51
4 meters	40

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 3 meters is higher (51 percent) than 2 meters (46 percent).
- B) 4 meters is lower (40 percent) than 1 meter (49 percent).
- C) 2 meters is higher (46 percent) than 1 meter (49 percent).
- D) 4 meters is higher (40 percent) than 1 meter (49 percent).

471. Hard

A student claims that the nest boxes occupied fell at every step from 1 meter to 4 meters.

Nest boxes occupied by height of the box	
height of the box	Nest boxes occupied
1 meter	53
2 meters	48
3 meters	52
4 meters	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 2 meters is higher (48 percent) than 1 meter (53 percent).
- B) 3 meters is higher (52 percent) than 2 meters (48 percent).
- C) 4 meters is higher (38 percent) than 1 meter (53 percent).
- D) 4 meters is lower (38 percent) than 1 meter (53 percent).

472. Hard

A student claims that the bus trip time fell at every step from month 1 to month 4.

Bus trip time by month after the lane opened	
month after the lane opened	Bus trip time
month 1	49
month 2	46
month 3	51
month 4	40

Which choice most effectively uses data from the table to challenge the student's claim?

- A) month 4 is lower (40 minutes) than month 1 (49 minutes).
- B) month 4 is higher (40 minutes) than month 1 (49 minutes).
- C) month 3 is higher (51 minutes) than month 2 (46 minutes).
- D) month 2 is higher (46 minutes) than month 1 (49 minutes).

473. Hard

A student claims that the bus trip time fell at every step from month 1 to month 4.

Bus trip time by month after the lane opened	
month after the lane opened	Bus trip time
month 1	53
month 2	48
month 3	52
month 4	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) month 4 is lower (38 minutes) than month 1 (53 minutes).
- B) month 4 is higher (38 minutes) than month 1 (53 minutes).
- C) month 3 is higher (52 minutes) than month 2 (48 minutes).
- D) month 2 is higher (48 minutes) than month 1 (53 minutes).

474. Hard

A student claims that the bus trip time fell at every step from month 1 to month 4.

Bus trip time by month after the lane opened	
month after the lane opened	Bus trip time
month 1	43
month 2	39
month 3	45
month 4	31

Which choice most effectively uses data from the table to challenge the student's claim?

- A) month 4 is lower (31 minutes) than month 1 (43 minutes).
- B) month 4 is higher (31 minutes) than month 1 (43 minutes).
- C) month 3 is higher (45 minutes) than month 2 (39 minutes).
- D) month 2 is higher (39 minutes) than month 1 (43 minutes).

475. Hard

A student claims that the algae cover fell at every step from week 1 to week 4.

Algae cover by weeks since the heat wave	
weeks since the heat wave	Algae cover
week 1	49
week 2	46
week 3	51
week 4	40

Which choice most effectively uses data from the table to challenge the student's claim?

- A) week 4 is higher (40 percent) than week 1 (49 percent).
- B) week 3 is higher (51 percent) than week 2 (46 percent).
- C) week 2 is higher (46 percent) than week 1 (49 percent).
- D) week 4 is lower (40 percent) than week 1 (49 percent).

476. Hard

A student claims that the algae cover fell at every step from week 1 to week 4.

Algae cover by weeks since the heat wave	
weeks since the heat wave	Algae cover
week 1	43
week 2	39
week 3	45
week 4	31

Which choice most effectively uses data from the table to challenge the student's claim?

- A) week 2 is higher (39 percent) than week 1 (43 percent).
- B) week 4 is lower (31 percent) than week 1 (43 percent).
- C) week 4 is higher (31 percent) than week 1 (43 percent).
- D) week 3 is higher (45 percent) than week 2 (39 percent).

477. Hard

A student claims that the attendance rose at every step from 7:15 to 8:45.

Attendance by start time	
start time	Attendance
7:15	15
7:45	18
8:15	13
8:45	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 8:15 is lower (13 percent) than 7:45 (18 percent).
- B) 8:45 is higher (24 percent) than 7:15 (15 percent).
- C) 7:45 is lower (18 percent) than 7:15 (15 percent).
- D) 8:45 is lower (24 percent) than 7:15 (15 percent).

478. Hard

A student claims that the attendance rose at every step from 7:15 to 8:45.

Attendance by start time	
start time	Attendance
7:15	23
7:45	28
8:15	24
8:45	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 8:15 is lower (24 percent) than 7:45 (28 percent).
- B) 8:45 is lower (38 percent) than 7:15 (23 percent).
- C) 8:45 is higher (38 percent) than 7:15 (23 percent).
- D) 7:45 is lower (28 percent) than 7:15 (23 percent).

479. Hard

A student claims that the cracked pots fell at every step from none to 15 percent.

Cracked pots by shell temper added	
shell temper added	Cracked pots
none	49
5 percent	46
10 percent	51
15 percent	40

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 15 percent is higher (40 percent) than none (49 percent).
- B) 15 percent is lower (40 percent) than none (49 percent).
- C) 10 percent is higher (51 percent) than 5 percent (46 percent).
- D) 5 percent is higher (46 percent) than none (49 percent).

480. Hard

A student claims that the cracked pots fell at every step from none to 15 percent.

Cracked pots by shell temper added	
shell temper added	Cracked pots
none	53
5 percent	48
10 percent	52
15 percent	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 5 percent is higher (48 percent) than none (53 percent).
- B) 15 percent is higher (38 percent) than none (53 percent).
- C) 15 percent is lower (38 percent) than none (53 percent).
- D) 10 percent is higher (52 percent) than 5 percent (48 percent).

481. Hard

A student claims that the cracked pots fell at every step from none to 15 percent.

Cracked pots by shell temper added	
shell temper added	Cracked pots
none	43
5 percent	39
10 percent	45
15 percent	31

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 15 percent is lower (31 percent) than none (43 percent).
- B) 5 percent is higher (39 percent) than none (43 percent).
- C) 15 percent is higher (31 percent) than none (43 percent).
- D) 10 percent is higher (45 percent) than 5 percent (39 percent).

482. Hard

A student claims that the page tears rose at every step from 20 years to 120 years.

Page tears by age of the iron-gall letters	
age of the iron-gall letters	Page tears
20 years	15
50 years	18
80 years	13
120 years	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 120 years is higher (24 number) than 20 years (15 number).
- B) 120 years is lower (24 number) than 20 years (15 number).
- C) 50 years is lower (18 number) than 20 years (15 number).
- D) 80 years is lower (13 number) than 50 years (18 number).

483. Hard

A student claims that the page tears rose at every step from 20 years to 120 years.

Page tears by age of the iron-gall letters	
age of the iron-gall letters	Page tears
20 years	11
50 years	15
80 years	9
120 years	23

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 50 years is lower (15 number) than 20 years (11 number).
- B) 120 years is higher (23 number) than 20 years (11 number).
- C) 120 years is lower (23 number) than 20 years (11 number).
- D) 80 years is lower (9 number) than 50 years (15 number).

484. Hard

A student claims that the visitor time rose at every step from 10 words to 80 words.

Visitor time by caption length	
caption length	Visitor time
10 words	15
25 words	18
50 words	13
80 words	24

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 25 words is lower (18 minutes) than 10 words (15 minutes).
- B) 80 words is higher (24 minutes) than 10 words (15 minutes).
- C) 50 words is lower (13 minutes) than 25 words (18 minutes).
- D) 80 words is lower (24 minutes) than 10 words (15 minutes).

485. Hard

A student claims that the visitor time rose at every step from 10 words to 80 words.

Visitor time by caption length	
caption length	Visitor time
10 words	23
25 words	28
50 words	24
80 words	38

Which choice most effectively uses data from the table to challenge the student's claim?

- A) 80 words is lower (38 minutes) than 10 words (23 minutes).
- B) 80 words is higher (38 minutes) than 10 words (23 minutes).
- C) 25 words is lower (28 minutes) than 10 words (23 minutes).
- D) 50 words is lower (24 minutes) than 25 words (28 minutes).

Information and Ideas: Inferences

486. *Medium*

Dr. Elena Voss has studied kelp forests along the California coast. Voss claims that standing kelp is associated with higher numbers of juvenile rockfish. In the study, divers compared juvenile rockfish counts in standing kelp and on neighboring bare rock. The results showed that juvenile counts were higher in standing kelp than on bare rock. Voss notes, however, that the divers did not count adult rockfish.

Which choice is most strongly supported by the text?

- A) The study proves that standing kelp is associated with higher numbers of juvenile rockfish in every place and in every year.
- B) The study was abandoned before any results were collected.
- C) In the cases the study describes, the reported result lines up with the claim that standing kelp is associated with higher numbers of juvenile rockfish, though the text also marks a limit.
- D) Because the divers did not count adult rockfish, the result described in the text cannot be stated at all.

487. *Medium*

Dr. Helen Cho has studied iron-gall ink on nineteenth-century letters. Cho claims that iron-gall ink is associated with holes and cracks in the paper beneath it. In the study, she examined letters whose ink had been identified as iron gall. The results showed that the inked lines were often the places where the paper had cracked or fallen out. Cho notes, however, that she did not test modern inks.

Which choice is most strongly supported by the text?

- A) Because she did not test modern inks, the result described in the text cannot be stated at all.
- B) The study was abandoned before any results were collected.
- C) The study proves that iron-gall ink is associated with holes and cracks in the paper beneath it in every place and in every year.
- D) In the cases the study describes, the reported result lines up with the claim that iron-gall ink is associated with holes and cracks in the paper beneath it, though the text also marks a limit.

488. *Medium*

Dr. Imani Cole has studied bees in rooftop hives and in a suburban park. Cole claims that rooftop hives in that city hold more bee species than the nearby park. In the study, her team counted bee species in the hives and in the park. The results showed that the rooftop count was higher than the park count. Cole notes, however, that one year cannot show whether the city is safer for bees over time.

Which choice is most strongly supported by the text?

- A) The study proves that rooftop hives in that city hold more bee species than the nearby park in every place and in every year.
- B) In the cases the study describes, the reported result lines up with the claim that rooftop hives in that city hold more bee species than the nearby park, though the text also marks a limit.
- C) The study was abandoned before any results were collected.
- D) Because one year cannot show whether the city is safer for bees over time, the result described in the text cannot be stated at all.

489. Medium

Dr. Andrei Sokolov has studied algae on a melting glacier. Sokolov claims that darker algae on the ice is associated with faster local melt. In the study, his team measured algae cover and melt on adjacent plots. The results showed that plots with more algae lost more ice that week than plots with less algae. Sokolov notes, however, that the team did not compare air temperatures above the plots.

Which choice is most strongly supported by the text?

- A) Because the team did not compare air temperatures above the plots, the result described in the text cannot be stated at all.
- B) In the cases the study describes, the reported result lines up with the claim that darker algae on the ice is associated with faster local melt, though the text also marks a limit.
- C) The study was abandoned before any results were collected.
- D) The study proves that darker algae on the ice is associated with faster local melt in every place and in every year.

490. Medium

Dr. Marco Bell has studied clay pots from a riverside workshop. Bell claims that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand. In the study, he fired matched vessels that differed only in the temper added to the clay. The results showed that fewer shell-tempered pots cracked than sand-tempered pots. Bell notes, however, that he did not test whether the pots survived later use over a fire.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) In the cases the study describes, the reported result lines up with the claim that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand, though the text also marks a limit.
- C) The study proves that clay mixed with crushed shell cracked less often in the kiln than clay mixed with sand in every place and in every year.
- D) Because he did not test whether the pots survived later use over a fire, the result described in the text cannot be stated at all.

491. Medium

Dr. Fatima Noor has studied small loans to market vendors. Noor claims that vendors who received a loan were more likely to still be trading six months later than vendors who did not. In the study, she followed two groups of vendors who had applied to the same program. The results showed that a larger share of the loan group was still trading after six months. Noor notes, however, that the study does not show that every loan was spent on the business.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that vendors who received a loan were more likely to still be trading six months later than vendors who did not, though the text also marks a limit.
- B) Because the study does not show that every loan was spent on the business, the result described in the text cannot be stated at all.
- C) The study proves that vendors who received a loan were more likely to still be trading six months later than vendors who did not in every place and in every year.
- D) The study was abandoned before any results were collected.

492. Medium

Dr. Alice Peng has studied rehearsal notes for a 1936 production. Peng claims that the director cut a scene in order to keep the running time under two hours. In the study, the notes record the timing of each act and the reason written beside the cut. The results showed that the cut scene was the one marked 'too long' in the director's hand. Peng notes, however, that the notes do not say whether audiences liked the shorter version.

Which choice is most strongly supported by the text?

- A) Because the notes do not say whether audiences liked the shorter version, the result described in the text cannot be stated at all.
- B) The study proves that the director cut a scene in order to keep the running time under two hours in every place and in every year.
- C) In the cases the study describes, the reported result lines up with the claim that the director cut a scene in order to keep the running time under two hours, though the text also marks a limit.
- D) The study was abandoned before any results were collected.

493. Medium

Dr. Rosa Nguyen has studied willows in a valley where wolves had returned. Nguyen claims that willow seedlings grew taller on banks where browsing decreased after wolves returned. In the study, she measured seedling height and signs of browsing on the same banks. The results showed that banks with fewer signs of browsing had taller willow seedlings. Nguyen notes, however, that she did not measure bird nests in the willows.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that willow seedlings grew taller on banks where browsing decreased after wolves returned, though the text also marks a limit.
- B) Because she did not measure bird nests in the willows, the result described in the text cannot be stated at all.
- C) The study was abandoned before any results were collected.
- D) The study proves that willow seedlings grew taller on banks where browsing decreased after wolves returned in every place and in every year.

494. Medium

Dr. Leo Martins has studied a restored wetland beside a river. Martins claims that the wetland held floodwater that would otherwise have reached the road. In the study, gauges recorded water depth in the wetland and on the road during the same storm. The results showed that the wetland depth rose while the road remained dry. Martins notes, however, that the gauges were not left in place over the winter.

Which choice is most strongly supported by the text?

- A) Because the gauges were not left in place over the winter, the result described in the text cannot be stated at all.
- B) The study proves that the wetland held floodwater that would otherwise have reached the road in every place and in every year.
- C) In the cases the study describes, the reported result lines up with the claim that the wetland held floodwater that would otherwise have reached the road, though the text also marks a limit.
- D) The study was abandoned before any results were collected.

495. Medium

Dr. Sophie Bernard has studied passive voice in lab reports. Bernard claims that readers judged reports written in the passive voice to sound more certain, even when the results were the same. In the study, she gave readers matched reports that differed only in voice. The results showed that readers rated the passive versions as more certain. Bernard notes, however, that she did not test whether scientists themselves prefer one voice.

Which choice is most strongly supported by the text?

- A) The study proves that readers judged reports written in the passive voice to sound more certain, even when the results were the same in every place and in every year.
- B) In the cases the study describes, the reported result lines up with the claim that readers judged reports written in the passive voice to sound more certain, even when the results were the same, though the text also marks a limit.
- C) Because she did not test whether scientists themselves prefer one voice, the result described in the text cannot be stated at all.
- D) The study was abandoned before any results were collected.

496. Medium

Dr. Karen Ito has studied a city that stopped charging library overdue fines. Ito claims that more overdue books came back in the months after fines ended than in the months before. In the study, the library compared return counts for the two periods. The results showed that returns of overdue books rose after fines ended. Ito notes, however, that other changes, including longer open hours, happened in the same months.

Which choice is most strongly supported by the text?

- A) The study proves that more overdue books came back in the months after fines ended than in the months before in every place and in every year.
- B) Because other changes, including longer open hours, happened in the same months, the result described in the text cannot be stated at all.
- C) In the cases the study describes, the reported result lines up with the claim that more overdue books came back in the months after fines ended than in the months before, though the text also marks a limit.
- D) The study was abandoned before any results were collected.

497. Medium

Dr. Clara Mendes has studied a 1602 coastal chart. Mendes claims that the 1602 chart shows a bay that later surveys place farther west. In the study, she overlaid the chart on a nineteenth-century survey of the same coast. The results showed that the bay drawn in 1602 sits east of the bay on the later survey. Mendes notes, however, that she did not claim the coastline itself had moved.

Which choice is most strongly supported by the text?

- A) The study proves that the 1602 chart shows a bay that later surveys place farther west in every place and in every year.
- B) Because she did not claim the coastline itself had moved, the result described in the text cannot be stated at all.
- C) The study was abandoned before any results were collected.
- D) In the cases the study describes, the reported result lines up with the claim that the 1602 chart shows a bay that later surveys place farther west, though the text also marks a limit.

498. Medium

Dr. Yara Hassan has studied compost piles and weed seeds. Hassan claims that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge. In the study, she buried seed packets at measured temperatures and then tried to sprout them. The results showed that fewer seeds sprouted from the hot center than from the cool edge. Hassan notes, however, that she did not test crop seeds that a gardener might want to survive.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge, though the text also marks a limit.
- B) The study proves that weed seeds in the hottest part of the pile were less likely to sprout than seeds at the cool edge in every place and in every year.
- C) The study was abandoned before any results were collected.
- D) Because she did not test crop seeds that a gardener might want to survive, the result described in the text cannot be stated at all.

499. Medium

Dr. Paolo Ricci has studied seedlings grown with soil fungi. Ricci claims that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them. In the study, he used the same soil, light, and water, and added the fungi only to one group. The results showed that the fungi group weighed more at eight weeks. Ricci notes, however, that he did not measure the seedlings' survival through winter.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) In the cases the study describes, the reported result lines up with the claim that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them, though the text also marks a limit.
- C) The study proves that seedlings grown with the fungi were heavier after eight weeks than seedlings grown without them in every place and in every year.
- D) Because he did not measure the seedlings' survival through winter, the result described in the text cannot be stated at all.

500. Medium

Dr. Brian Holt has studied helmet use and head injuries in a city bike-share program. Holt claims that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational. In the study, he surveyed riders after trips over one summer. The results showed that helmeted riders reported fewer head injuries than riders who reported no helmet. Holt notes, however, that the survey cannot separate the helmet from the other habits of the riders who wear one.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational, though the text also marks a limit.
- B) Because the survey cannot separate the helmet from the other habits of the riders who wear one, the result described in the text cannot be stated at all.
- C) The study was abandoned before any results were collected.
- D) The study proves that riders who reported wearing a helmet also reported fewer head injuries, and the study was observational in every place and in every year.

501. Medium

Dr. Ellen Zhou has studied dust layers in an ice core. Zhou claims that thicker dust layers in the core line up with years the nearby valley recorded as drought. In the study, she matched dated layers in the ice with the valley's harvest notes. The results showed that the thickest dust layers fell in years the notes call dry. Zhou notes, however, that the core does not name the source of every grain of dust.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) Because the core does not name the source of every grain of dust, the result described in the text cannot be stated at all.
- C) In the cases the study describes, the reported result lines up with the claim that thicker dust layers in the core line up with years the nearby valley recorded as drought, though the text also marks a limit.
- D) The study proves that thicker dust layers in the core line up with years the nearby valley recorded as drought in every place and in every year.

502. Medium

Dr. Nadia Korol has studied desert varnish on sunlit rocks. Korol claims that the varnish is thicker on rocks that stay damp longer after rare rains. In the study, she measured varnish and drying time on rocks in one canyon. The results showed that rocks that dried slowly had thicker varnish than rocks that dried within an hour. Korol notes, however, that she did not determine whether microbes or chemistry laid the varnish down.

Which choice is most strongly supported by the text?

- A) Because she did not determine whether microbes or chemistry laid the varnish down, the result described in the text cannot be stated at all.
- B) The study was abandoned before any results were collected.
- C) In the cases the study describes, the reported result lines up with the claim that the varnish is thicker on rocks that stay damp longer after rare rains, though the text also marks a limit.
- D) The study proves that the varnish is thicker on rocks that stay damp longer after rare rains in every place and in every year.

503. Medium

Dr. Sylvia Markham has studied recipes in an eighteenth-century household book. Markham claims that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes. In the study, she sorted the dated recipes by the season written beside them. The results showed that winter recipes list dried fruit more often and fresh herbs less often. Markham notes, however, that the book does not say which recipes were actually cooked.

Which choice is most strongly supported by the text?

- A) Because the book does not say which recipes were actually cooked, the result described in the text cannot be stated at all.
- B) In the cases the study describes, the reported result lines up with the claim that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes, though the text also marks a limit.
- C) The study was abandoned before any results were collected.
- D) The study proves that recipes marked as winter dishes use more dried fruit and less fresh herbs than recipes marked as summer dishes in every place and in every year.

504. Medium

Dr. Angela Brooks has studied audience copies of a poem and library loans of the same book. Brooks claims that loans of the book rose in the month after a public reading and fell again later. In the study, she compared monthly loan counts with the date of the reading. The results showed that the loan count was higher in the month after the reading than in the month before. Brooks notes, however, that the loan records do not show whether the borrowers attended the reading.

Which choice is most strongly supported by the text?

- A) The study proves that loans of the book rose in the month after a public reading and fell again later in every place and in every year.
- B) The study was abandoned before any results were collected.
- C) In the cases the study describes, the reported result lines up with the claim that loans of the book rose in the month after a public reading and fell again later, though the text also marks a limit.
- D) Because the loan records do not show whether the borrowers attended the reading, the result described in the text cannot be stated at all.

505. Medium

Dr. Felix Nguyen has studied mussels on a rocky shore. Nguyen claims that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day. In the study, he measured mussels at marked heights on the same rock. The results showed that mussels lower down, in the wetter band, were larger. Nguyen notes, however, that he did not count the birds that eat mussels.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day, though the text also marks a limit.
- B) Because he did not count the birds that eat mussels, the result described in the text cannot be stated at all.
- C) The study was abandoned before any results were collected.
- D) The study proves that mussels in the wettest band of the rock were larger than mussels in the band that dries out each day in every place and in every year.

506. Medium

Dr. Hassan Ali has studied a windbreak of shrubs beside crop rows. Ali claims that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open. In the study, he collected soil at several distances after one storm. The results showed that the rows nearest the shrubs lost less soil than the open rows. Ali notes, however, that he did not measure the crop's yield.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) The study proves that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open in every place and in every year.
- C) Because he did not measure the crop's yield, the result described in the text cannot be stated at all.
- D) In the cases the study describes, the reported result lines up with the claim that rows just downwind of the shrubs lost less soil in a windstorm than rows in the open, though the text also marks a limit.

507. Medium

Dr. Mei Lin has studied bird collisions with glass on a campus building. Lin claims that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall. In the study, staff walked the wall each morning and recorded strikes. The results showed that treated windows had fewer recorded strikes. Lin notes, however, that the count does not identify the species in every case.

Which choice is most strongly supported by the text?

- A) Because the count does not identify the species in every case, the result described in the text cannot be stated at all.
- B) The study proves that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall in every place and in every year.
- C) The study was abandoned before any results were collected.
- D) In the cases the study describes, the reported result lines up with the claim that windows treated with visible dots had fewer collisions the next month than untreated windows on the same wall, though the text also marks a limit.

508. Medium

Dr. George Salim has studied rehearsal recordings of a string quartet. Salim claims that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure. In the study, he counted repetitions in the rehearsal tape and then surveyed listeners of the concert. The results showed that the most repeated passage received the highest security ratings. Salim notes, however, that he did not ask the players which passage they feared.

Which choice is most strongly supported by the text?

- A) The study proves that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure in every place and in every year.
- B) Because he did not ask the players which passage they feared, the result described in the text cannot be stated at all.
- C) In the cases the study describes, the reported result lines up with the claim that the passage the quartet repeated most often in rehearsal was the passage listeners later called the most secure, though the text also marks a limit.
- D) The study was abandoned before any results were collected.

509. Medium

Dr. Monica Reyes has studied a simplified tax notice. Reyes claims that households that received the simplified notice were more likely to pay before the deadline. In the study, she randomly assigned the simplified notice or the old notice. The results showed that a larger share of the simplified group paid on time. Reyes notes, however, that the study's random assignment still left color and wording changed together.

Which choice is most strongly supported by the text?

- A) The study proves that households that received the simplified notice were more likely to pay before the deadline in every place and in every year.
- B) The study was abandoned before any results were collected.
- C) Because the study's random assignment still left color and wording changed together, the result described in the text cannot be stated at all.
- D) In the cases the study describes, the reported result lines up with the claim that households that received the simplified notice were more likely to pay before the deadline, though the text also marks a limit.

510. Hard

On the night before the recital, Marisol played the same four measures until the notes were even. She let her brother's call ring unanswered. When she finally turned out the light, she left the music open on the stand.

Which choice is most strongly supported by the text?

- A) Marisol is treating the recital as more pressing, that night, than the phone call.
- B) Marisol dislikes playing music.
- C) Marisol will win a prize at the recital.
- D) Marisol's brother is angry with her for not answering.

511. Hard

Ellis waited on the pier long after the other boats had come in. He recoiled the same line twice, not because it was tangled, but because his hands needed something to do. When the harbor bell marked the hour, he was still watching the gap between the jetties.

Which choice is most strongly supported by the text?

- A) The other crews refused to speak to him.
- B) A boat Ellis is watching for is later than the others that use the harbor.
- C) Ellis is the harbor master.
- D) The missing boat has sunk.

512. Hard

Lena labeled the last box and then opened it again to check the blue bowl. It was there, wrapped, where she had put it. She carried that box to the truck herself and set it behind the driver's seat, not with the stack of boxes she had told the movers to take.

Which choice is most strongly supported by the text?

- A) The blue bowl matters to Lena more than the ordinary contents of the other boxes.
- B) Lena is moving to another country.
- C) The blue bowl was a gift from the movers.
- D) The movers have stolen a box.

513. Hard

James wrote the apology twice and both times tore it up. The third version he folded and addressed. He walked as far as the mailbox, held the letter over the slot, and then put it back in his coat.

Which choice is most strongly supported by the text?

- A) James is not yet willing to send the apology he has written.
- B) The letter was too long for the mailbox.
- C) The person he wrote to has already forgiven him.
- D) James does not believe he did anything wrong, and the letter says so.

514. Hard

On the late bus, Malik reread the sentence he had underlined that morning. At his stop he did not get off. He rode to the end of the line, still mouthing the words, and only then walked back toward home.

Which choice is most strongly supported by the text?

- A) Malik cannot read without saying the words aloud in class.
- B) The underlined sentence holds Malik's attention more strongly than the routine of getting off at his stop.
- C) Malik has missed the last bus home and will have to sleep at the station.
- D) The sentence he underlined is from a letter rejecting him.

515. Hard

Before the curtain, Anya walked the width of the stage once, touched the table that was her only prop, and walked it again. She did not look at the seats. Her hands stopped shaking only after the second walk.

Which choice is most strongly supported by the text?

- A) The audience has already left.
- B) Anya feels nervous before the performance and has a way of settling herself.
- C) Anya will forget her lines.
- D) Anya dislikes the play she is about to perform.

516. Hard

The book had been due for a month. Sam slid it across the counter without the excuse he had rehearsed. The librarian stamped it, said nothing about the fine, and Sam, who had expected a lecture, thanked her twice.

Which choice is most strongly supported by the text?

- A) Sam cannot afford any fine and says so.
- B) The librarian does not notice that the book is late.
- C) Sam had expected to be rebuked for returning the book late.
- D) The book was never checked out in Sam's name.

517. Hard

It was still dark when Mr. Okonkwo unlocked the bakery. He set aside the first tray, the one with the cracked edge, for his own breakfast, and he put the even loaves in the window. By the time the streetlight went out, the window was full and the cracked tray was already half gone.

Which choice is most strongly supported by the text?

- A) Customers refuse to buy bread from his shop.
- B) The streetlight is inside the bakery.
- C) He baked nothing that morning.
- D) Mr. Okonkwo would rather sell the even loaves than the cracked ones.

518. Hard

The museum had closed, but Dana stayed on the step with her sketch of the statue she had not been allowed to finish. She added the hand from memory and then erased it. The guard who locked the side door nodded at the page and did not tell her to leave.

Which choice is most strongly supported by the text?

- A) Dana is not satisfied with drawing the statue's hand from memory alone.
- B) Dana has never seen the statue.
- C) The museum will open again in a few minutes.
- D) The guard is going to confiscate the sketch.

519. Hard

Dr. Luis Ortega has studied bus trips on Center Avenue. Ortega claims that a dedicated bus lane is associated with shorter bus trips at rush hour. In the study, his team timed buses before and after the lane was painted. The results showed that afternoon bus trips were shorter after the lane opened than before it. Ortega notes, however, that the study did not survey riders' satisfaction.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) Because the study did not survey riders' satisfaction, the result described in the text cannot be stated at all.
- C) In the cases the study describes, the reported result lines up with the claim that a dedicated bus lane is associated with shorter bus trips at rush hour, though the text also marks a limit.
- D) The study proves that a dedicated bus lane is associated with shorter bus trips at rush hour in every place and in every year.

520. Hard

Dr. Nina Patel has studied turnout in a local election. Patel claims that a mailed reminder is associated with slightly higher turnout. In the study, she compared precincts that received a postcard with precincts that did not. The results showed that turnout was higher in the precincts that received the postcard. Patel notes, however, that the study cannot show that every recipient read the card.

Which choice is most strongly supported by the text?

- A) The study proves that a mailed reminder is associated with slightly higher turnout in every place and in every year.
- B) In the cases the study describes, the reported result lines up with the claim that a mailed reminder is associated with slightly higher turnout, though the text also marks a limit.
- C) The study was abandoned before any results were collected.
- D) Because the study cannot show that every recipient read the card, the result described in the text cannot be stated at all.

521. Hard

Dr. Grace Adeyemi has studied students who switch languages during class discussion. Adeyemi claims that students who switched languages in discussion still wrote clear summaries in the language of the exam. In the study, she recorded discussions and then scored the written summaries. The results showed that summaries from students who had switched languages scored as high as summaries from students who had not. Adeyemi notes, however, that the study did not score spoken answers on the exam.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) In the cases the study describes, the reported result lines up with the claim that students who switched languages in discussion still wrote clear summaries in the language of the exam, though the text also marks a limit.
- C) The study proves that students who switched languages in discussion still wrote clear summaries in the language of the exam in every place and in every year.
- D) Because the study did not score spoken answers on the exam, the result described in the text cannot be stated at all.

522. Hard

Dr. Joan Ekstrom has studied a high school that moved its start time later. Ekstrom claims that a later start was associated with fewer first-period absences. In the study, she compared absence logs before and after the start moved from 7:30 to 8:30. The results showed that first-period absences fell in the semester after the change. Ekstrom notes, however, that she did not measure how long students actually slept.

Which choice is most strongly supported by the text?

- A) The study proves that a later start was associated with fewer first-period absences in every place and in every year.
- B) In the cases the study describes, the reported result lines up with the claim that a later start was associated with fewer first-period absences, though the text also marks a limit.
- C) Because she did not measure how long students actually slept, the result described in the text cannot be stated at all.
- D) The study was abandoned before any results were collected.

523. Hard

Dr. Camille Duval has studied summer surface temperatures under city trees. Duval claims that larger canopy cover is associated with cooler surfaces at midday. In the study, her team compared blocks with measured canopy percentages. The results showed that blocks with more canopy had cooler midday surfaces. Duval notes, however, that the team did not measure winter temperatures.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that larger canopy cover is associated with cooler surfaces at midday, though the text also marks a limit.
- B) Because the team did not measure winter temperatures, the result described in the text cannot be stated at all.
- C) The study proves that larger canopy cover is associated with cooler surfaces at midday in every place and in every year.
- D) The study was abandoned before any results were collected.

524. Hard

Dr. Edith Lang has studied county health reports from 1957. Lang claims that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them. In the study, she compared the county's own case counts for the two summers. The results showed that the count of new cases was lower in the summer after the clinics. Lang notes, however, that a drop in one county's report does not by itself prove the clinics caused it.

Which choice is most strongly supported by the text?

- A) The study proves that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them in every place and in every year.
- B) Because a drop in one county's report does not by itself prove the clinics caused it, the result described in the text cannot be stated at all.
- C) The study was abandoned before any results were collected.
- D) In the cases the study describes, the reported result lines up with the claim that the county recorded fewer new polio cases in the summer after school clinics than in the summer before them, though the text also marks a limit.

525. Hard

Dr. Hannah Weiss has studied homework hours and quiz scores in one course. Weiss claims that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores. In the study, she collected reported hours and quiz scores from the same students. The results showed that students with more reported hours had higher scores on average. Weiss notes, however, that the study did not observe whether the reported hours were accurate.

Which choice is most strongly supported by the text?

- A) The study proves that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores in every place and in every year.
- B) The study was abandoned before any results were collected.
- C) Because the study did not observe whether the reported hours were accurate, the result described in the text cannot be stated at all.
- D) In the cases the study describes, the reported result lines up with the claim that students who reported more homework hours had higher quiz scores, without the study showing that the hours caused the scores, though the text also marks a limit.

526. Hard

Dr. Patrick Doyle has studied a mill town in the 1840s. Doyle claims that letters from workers describe longer hours than the company's posted notice does. In the study, he compared dated letters with the notice printed the same year. The results showed that the letters name start and end times that add up to more hours than the notice lists. Doyle notes, however, that he found no letters from the mill owner about the schedule.

Which choice is most strongly supported by the text?

- A) The study proves that letters from workers describe longer hours than the company's posted notice does in every place and in every year.
- B) In the cases the study describes, the reported result lines up with the claim that letters from workers describe longer hours than the company's posted notice does, though the text also marks a limit.
- C) The study was abandoned before any results were collected.
- D) Because he found no letters from the mill owner about the schedule, the result described in the text cannot be stated at all.

527. Hard

Dr. Miguel Santos has studied steel bridges in hot weather. Santos claims that bridge decks grew longer on hot afternoons than on cool mornings. In the study, crews measured the same joints at dawn and at midafternoon. The results showed that the gaps at the joints were narrower in the afternoon than at dawn. Santos notes, however, that the crews did not measure traffic weight.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) Because the crews did not measure traffic weight, the result described in the text cannot be stated at all.
- C) The study proves that bridge decks grew longer on hot afternoons than on cool mornings in every place and in every year.
- D) In the cases the study describes, the reported result lines up with the claim that bridge decks grew longer on hot afternoons than on cool mornings, though the text also marks a limit.

528. Hard

Dr. Omar Farid has studied range of electric delivery vans in cold weather. Farid claims that the same vans traveled fewer miles per charge on cold mornings than on mild ones. In the study, drivers logged miles and temperature for identical routes. The results showed that miles per charge were lower when the morning temperature was lower. Farid notes, however, that the logs do not separate highway miles from city miles.

Which choice is most strongly supported by the text?

- A) The study proves that the same vans traveled fewer miles per charge on cold mornings than on mild ones in every place and in every year.
- B) Because the logs do not separate highway miles from city miles, the result described in the text cannot be stated at all.
- C) The study was abandoned before any results were collected.
- D) In the cases the study describes, the reported result lines up with the claim that the same vans traveled fewer miles per charge on cold mornings than on mild ones, though the text also marks a limit.

529. Hard

Dr. Naomi Feldman has studied two oral versions of a star story. Feldman claims that the two communities tell different stories about the same group of stars. In the study, she recorded tellers in both communities while they pointed out the stars. The results showed that the named stars match, and the plots of the stories do not. Feldman notes, however, that she did not claim that one story is older than the other.

Which choice is most strongly supported by the text?

- A) Because she did not claim that one story is older than the other, the result described in the text cannot be stated at all.
- B) The study was abandoned before any results were collected.
- C) The study proves that the two communities tell different stories about the same group of stars in every place and in every year.
- D) In the cases the study describes, the reported result lines up with the claim that the two communities tell different stories about the same group of stars, though the text also marks a limit.

530. Hard

Dr. Emily Cho has studied attendance on days when a school garden was used. Cho claims that attendance was higher on days with a scheduled garden lesson than on other days that week. In the study, she compared attendance rolls within the same classrooms. The results showed that fewer students were absent on garden days. Cho notes, however, that the rolls do not say whether the garden caused the attendance.

Which choice is most strongly supported by the text?

- A) The study proves that attendance was higher on days with a scheduled garden lesson than on other days that week in every place and in every year.
- B) The study was abandoned before any results were collected.
- C) In the cases the study describes, the reported result lines up with the claim that attendance was higher on days with a scheduled garden lesson than on other days that week, though the text also marks a limit.
- D) Because the rolls do not say whether the garden caused the attendance, the result described in the text cannot be stated at all.

531. Hard

Dr. Lydia Grant has studied a newspaper and a diary from the week of a town fire. Grant claims that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday. In the study, she read both documents side by side. The results showed that the diary's Tuesday entry describes the fire, and the headline says Thursday. Grant notes, however, that she does not know which document was written first on the day itself.

Which choice is most strongly supported by the text?

- A) Because she does not know which document was written first on the day itself, the result described in the text cannot be stated at all.
- B) The study was abandoned before any results were collected.
- C) In the cases the study describes, the reported result lines up with the claim that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday, though the text also marks a limit.
- D) The study proves that the diary places the fire on Tuesday, while the newspaper's headline places it on Thursday in every place and in every year.

532. Hard

Dr. Margaret Poe has studied salt and dried food in a ship's log. Poe claims that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels. In the study, she tracked remarks about the same barrels across the log. The results showed that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled. Poe notes, however, that the log is not a controlled experiment.

Which choice is most strongly supported by the text?

- A) Because the log is not a controlled experiment, the result described in the text cannot be stated at all.
- B) The study was abandoned before any results were collected.
- C) In the cases the study describes, the reported result lines up with the claim that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels, though the text also marks a limit.
- D) The study proves that barrels described as heavily salted were still listed as edible after more weeks than lightly salted barrels in every place and in every year.

533. Hard

Dr. Charles Ito has studied a nineteenth-century school that restricted sign language. Ito claims that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign. In the study, he compared reports from before and during the restriction. The results showed that the marks in those subjects were lower in the restriction years. Ito notes, however, that the reports do not record what families thought of the rule.

Which choice is most strongly supported by the text?

- A) The study proves that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign in every place and in every year.
- B) In the cases the study describes, the reported result lines up with the claim that school reports from the years of the restriction describe lower marks in subjects that had previously been taught in sign, though the text also marks a limit.
- C) The study was abandoned before any results were collected.
- D) Because the reports do not record what families thought of the rule, the result described in the text cannot be stated at all.

534. Hard

Dr. Rachel Stein has studied a reminder text and missed clinic appointments. Stein claims that clinics that sent a reminder text had fewer missed appointments the next month. In the study, she compared clinics that started texting with clinics that did not. The results showed that the texting clinics had a lower miss rate. Stein notes, however, that the comparison does not isolate the text from the new evening hour.

Which choice is most strongly supported by the text?

- A) Because the comparison does not isolate the text from the new evening hour, the result described in the text cannot be stated at all.
- B) The study was abandoned before any results were collected.
- C) The study proves that clinics that sent a reminder text had fewer missed appointments the next month in every place and in every year.
- D) In the cases the study describes, the reported result lines up with the claim that clinics that sent a reminder text had fewer missed appointments the next month, though the text also marks a limit.

535. Hard

Dr. Thomas Berger has studied nesting success of a shorebird. Berger claims that nests placed farther from the path were more likely to hatch than nests beside it. In the study, volunteers mapped nests and recorded which ones hatched. The results showed that a larger share of the distant nests hatched. Berger notes, however, that the volunteers did not band the adult birds.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that nests placed farther from the path were more likely to hatch than nests beside it, though the text also marks a limit.
- B) The study was abandoned before any results were collected.
- C) The study proves that nests placed farther from the path were more likely to hatch than nests beside it in every place and in every year.
- D) Because the volunteers did not band the adult birds, the result described in the text cannot be stated at all.

536. Hard

Dr. Ingrid Solberg has studied batteries stored at different states of charge. Solberg claims that batteries stored half charged held more of their capacity after six months than batteries stored fully charged. In the study, she measured capacity before and after storage. The results showed that the half-charged batteries lost less capacity. Solberg notes, however, that she did not test batteries made by another manufacturer.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) Because she did not test batteries made by another manufacturer, the result described in the text cannot be stated at all.
- C) The study proves that batteries stored half charged held more of their capacity after six months than batteries stored fully charged in every place and in every year.
- D) In the cases the study describes, the reported result lines up with the claim that batteries stored half charged held more of their capacity after six months than batteries stored fully charged, though the text also marks a limit.

537. Hard

Dr. Judith Hale has studied captions in a museum exhibit. Hale claims that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left. In the study, she asked matched groups, one shown the long caption and one shown a short label. The results showed that a larger share of the long-caption group stated the claim accurately. Hale notes, however, that she did not test whether visitors remembered the claim a week later.

Which choice is most strongly supported by the text?

- A) Because she did not test whether visitors remembered the claim a week later, the result described in the text cannot be stated at all.
- B) The study proves that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left in every place and in every year.
- C) In the cases the study describes, the reported result lines up with the claim that visitors who read the longer caption were more likely to state the exhibit's main claim correctly as they left, though the text also marks a limit.
- D) The study was abandoned before any results were collected.

538. Hard

Dr. Eleanor Voss has studied two editions of a political pamphlet from 1792. Voss claims that the second edition softens a sentence that the first edition states as a direct accusation. In the study, she compared the same paragraph in both editions. The results showed that the first edition names a person as responsible, and the second edition says only that mistakes were made. Voss notes, however, that she does not know how many readers saw each edition.

Which choice is most strongly supported by the text?

- A) Because she does not know how many readers saw each edition, the result described in the text cannot be stated at all.
- B) The study proves that the second edition softens a sentence that the first edition states as a direct accusation in every place and in every year.
- C) The study was abandoned before any results were collected.
- D) In the cases the study describes, the reported result lines up with the claim that the second edition softens a sentence that the first edition states as a direct accusation, though the text also marks a limit.

539. Hard

Dr. Christine Dahl has studied a cap on class size in an after-school program. Dahl claims that sections kept under fifteen students had higher completion rates than larger sections of the same course. In the study, she compared completion in sections of the same subject. The results showed that the smaller sections finished a larger share of students. Dahl notes, however, that the comparison does not separate class size from the instructor.

Which choice is most strongly supported by the text?

- A) In the cases the study describes, the reported result lines up with the claim that sections kept under fifteen students had higher completion rates than larger sections of the same course, though the text also marks a limit.
- B) The study was abandoned before any results were collected.
- C) Because the comparison does not separate class size from the instructor, the result described in the text cannot be stated at all.
- D) The study proves that sections kept under fifteen students had higher completion rates than larger sections of the same course in every place and in every year.

540. Hard

Dr. Laura Kim has studied salt marsh grass and flood height. Kim claims that marshes with denser grass had lower peak water on the landward side during the same tide. In the study, she measured grass density and water height along one creek. The results showed that the denser stretches had lower landward peaks. Kim notes, however, that she did not measure the grass in winter.

Which choice is most strongly supported by the text?

- A) The study was abandoned before any results were collected.
- B) The study proves that marshes with denser grass had lower peak water on the landward side during the same tide in every place and in every year.
- C) In the cases the study describes, the reported result lines up with the claim that marshes with denser grass had lower peak water on the landward side during the same tide, though the text also marks a limit.
- D) Because she did not measure the grass in winter, the result described in the text cannot be stated at all.

- D) are

782. Hard

This morning, either the interns or the director _____ answering the main phone.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) is
- B) are
- C) were
- D) have been

783. Hard

This morning, either the director or the interns _____ sorting the mail.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) are
- B) has been
- C) is
- D) was

784. Hard

At noon, neither the violin nor the flutes _____ in tune.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) were
- B) are
- C) is
- D) was

785. Hard

At noon, neither the flutes nor the violin _____ ready for the downbeat.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) been
- B) are
- C) was
- D) were

786. Hard

Last spring, neither the oak nor the elms _____ pruned.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) were
- B) is
- C) are
- D) was

787. Hard

Last spring, neither the elms nor the oak _____ marked on the map.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) were
- B) are
- C) have been
- D) was

788. Hard

Today, either the chart or the photographs _____ needed in the meeting.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) has been
- B) is
- C) are
- D) was

789. Hard

Today, either the photographs or the chart _____ sufficient for the briefing.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) have been
- B) is
- C) were
- D) are

790. Hard

The plan calls for raising the wall, widening the gate, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) replacement of roofing
- B) replacing the roof
- C) the roof is replaced
- D) to replace the roof

791. Hard

The course trains students in reading closely, writing clearly, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) citation of a source is done
- B) they cite sources
- C) to cite sources
- D) citing sources

792. Hard

We can store the prints, lend them to the school, or _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) to archive them
- B) archiving them
- C) they are archived
- D) archive them

793. Hard

The speech should open with the question, present the evidence, and _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) it ended with the recommendation
- B) end with the recommendation
- C) ending with the recommendation
- D) to end with the recommendation

794. Hard

The archivist _____ we consulted confirmed the date of the letter.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) whose
- B) who
- C) which
- D) whom

795. Hard

The conductor _____ the orchestra admired kept the tempo steady.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) which
- B) whom
- C) whose
- D) who

796. Hard

The mechanic _____ they trusted explained the repair in plain words.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) whom
- B) which
- C) who
- D) whose

797. Hard

The guide _____ the visitors followed knew every turn of the path.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) which
- B) whom
- C) who
- D) whose

798. Hard

The editor _____ the author thanked caught a repeated paragraph.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) who
- B) whom
- C) which
- D) whose

799. Hard

The nurse _____ the patients recognized had worked the night shift.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) who
- B) which
- C) whom
- D) whose

800. Hard

The coach _____ the players chose spoke briefly after the game.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A) whose
- B) who
- C) which
- D) whom

Expression of Ideas: Rhetorical Synthesis

801. *Easy*

While researching a paper, a student took the following notes:

- Subject studied: kelp forests along the California coast.
- Researcher: Dr. Elena Voss.
- Result reported: juvenile counts were higher in standing kelp than on bare rock.
- Caution the researcher notes: the divers did not count adult rockfish.
- A later observation: After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) After a storm stripped the kelp from one cove, the juvenile count in that cove fell, and Voss cautions that the divers did not count adult rockfish.
- B) Voss reports that juvenile counts were higher in standing kelp than on bare rock.
- C) Voss reports that it was not the case that juvenile counts were higher in standing kelp than on bare rock.
- D) Voss cautions that the divers did not count adult rockfish.

802. *Easy*

While researching a paper, a student took the following notes:

- Subject studied: bus trips on Center Avenue.
- Researcher: Dr. Luis Ortega.
- Result reported: afternoon bus trips were shorter after the lane opened than before it.
- Caution the researcher notes: the study did not survey riders' satisfaction.
- A later observation: The same buses were no faster at dawn, when the avenue was already empty.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) The same buses were no faster at dawn, when the avenue was already empty, and Ortega cautions that the study did not survey riders' satisfaction.
- B) Ortega reports that it was not the case that afternoon bus trips were shorter after the lane opened than before it.
- C) Ortega cautions that the study did not survey riders' satisfaction.
- D) Ortega reports that afternoon bus trips were shorter after the lane opened than before it.

803. Easy

While researching a paper, a student took the following notes:

- Subject studied: algae on a melting glacier.
- Researcher: Dr. Andrei Sokolov.
- Result reported: plots with more algae lost more ice that week than plots with less algae.
- Caution the researcher notes: the team did not compare air temperatures above the plots.
- A later observation: When the algae was washed off one plot, that plot's melt slowed.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Sokolov reports that plots with more algae lost more ice that week than plots with less algae.
- B) Sokolov reports that it was not the case that plots with more algae lost more ice that week than plots with less algae.
- C) Sokolov cautions that the team did not compare air temperatures above the plots.
- D) When the algae was washed off one plot, that plot's melt slowed, and Sokolov cautions that the team did not compare air temperatures above the plots.

804. Easy

While researching a paper, a student took the following notes:

- Subject studied: a high school that moved its start time later.
- Researcher: Dr. Joan Ekstrom.
- Result reported: first-period absences fell in the semester after the change.
- Caution the researcher notes: she did not measure how long students actually slept.
- A later observation: Absences in the last period of the day did not fall.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ekstrom reports that it was not the case that first-period absences fell in the semester after the change.
- B) Ekstrom cautions that she did not measure how long students actually slept.
- C) Ekstrom reports that first-period absences fell in the semester after the change.
- D) Absences in the last period of the day did not fall, and Ekstrom cautions that she did not measure how long students actually slept.

805. Easy

While researching a paper, a student took the following notes:

- Subject studied: small loans to market vendors.
- Researcher: Dr. Fatima Noor.
- Result reported: a larger share of the loan group was still trading after six months.
- Caution the researcher notes: the study does not show that every loan was spent on the business.
- A later observation: The gap was smaller among vendors who already had a stall of their own.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Noor reports that it was not the case that a larger share of the loan group was still trading after six months.
- B) Noor cautions that the study does not show that every loan was spent on the business.
- C) Noor reports that a larger share of the loan group was still trading after six months.
- D) The gap was smaller among vendors who already had a stall of their own, and Noor cautions that the study does not show that every loan was spent on the business.

806. Easy

While researching a paper, a student took the following notes:

- Subject studied: county health reports from 1957.
- Researcher: Dr. Edith Lang.
- Result reported: the count of new cases was lower in the summer after the clinics.
- Caution the researcher notes: a drop in one county's report does not by itself prove the clinics caused it.
- A later observation: A neighboring county that held no clinics did not show a similar drop.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Lang reports that it was not the case that the count of new cases was lower in the summer after the clinics.
- B) Lang reports that the count of new cases was lower in the summer after the clinics.
- C) A neighboring county that held no clinics did not show a similar drop, and Lang cautions that a drop in one county's report does not by itself prove the clinics caused it.
- D) Lang cautions that a drop in one county's report does not by itself prove the clinics caused it.

807. Easy

While researching a paper, a student took the following notes:

- Subject studied: a restored wetland beside a river.
- Researcher: Dr. Leo Martins.
- Result reported: the wetland depth rose while the road remained dry.
- Caution the researcher notes: the gauges were not left in place over the winter.
- A later observation: In a larger storm the wetland filled and the road flooded anyway.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) In a larger storm the wetland filled and the road flooded anyway, and Martins cautions that the gauges were not left in place over the winter.
- B) Martins cautions that the gauges were not left in place over the winter.
- C) Martins reports that it was not the case that the wetland depth rose while the road remained dry.
- D) Martins reports that the wetland depth rose while the road remained dry.

808. Easy

While researching a paper, a student took the following notes:

- Subject studied: steel bridges in hot weather.
- Researcher: Dr. Miguel Santos.
- Result reported: the gaps at the joints were narrower in the afternoon than at dawn.
- Caution the researcher notes: the crews did not measure traffic weight.
- A later observation: On a cool cloudy day the afternoon gaps barely changed.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Santos cautions that the crews did not measure traffic weight.
- B) On a cool cloudy day the afternoon gaps barely changed, and Santos cautions that the crews did not measure traffic weight.
- C) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn.
- D) Santos reports that it was not the case that the gaps at the joints were narrower in the afternoon than at dawn.

809. Easy

While researching a paper, a student took the following notes:

- Subject studied: a city that stopped charging library overdue fines.
- Researcher: Dr. Karen Ito.
- Result reported: returns of overdue books rose after fines ended.
- Caution the researcher notes: other changes, including longer open hours, happened in the same months.
- A later observation: New checkouts also rose, so the library was busier overall.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ito reports that it was not the case that returns of overdue books rose after fines ended.
- B) New checkouts also rose, so the library was busier overall, and Ito cautions that other changes, including longer open hours, happened in the same months.
- C) Ito reports that returns of overdue books rose after fines ended.
- D) Ito cautions that other changes, including longer open hours, happened in the same months.

810. Easy

While researching a paper, a student took the following notes:

- Subject studied: two oral versions of a star story.
- Researcher: Dr. Naomi Feldman.
- Result reported: the named stars match, and the plots of the stories do not.
- Caution the researcher notes: she did not claim that one story is older than the other.
- A later observation: A third community farther inland does not tell a story about that group at all.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Feldman reports that the named stars match, and the plots of the stories do not.
- B) A third community farther inland does not tell a story about that group at all, and Feldman cautions that she did not claim that one story is older than the other.
- C) Feldman reports that it was not the case that the named stars match, and the plots of the stories do not.
- D) Feldman cautions that she did not claim that one story is older than the other.

811. Easy

While researching a paper, a student took the following notes:

- Subject studied: seedlings grown with soil fungi.
- Researcher: Dr. Paolo Ricci.
- Result reported: the fungi group weighed more at eight weeks.
- Caution the researcher notes: he did not measure the seedlings' survival through winter.
- A later observation: When he sterilized the soil after four weeks, the weight gap stopped growing.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ricci cautions that he did not measure the seedlings' survival through winter.
- B) Ricci reports that it was not the case that the fungi group weighed more at eight weeks.
- C) When he sterilized the soil after four weeks, the weight gap stopped growing, and Ricci cautions that he did not measure the seedlings' survival through winter.
- D) Ricci reports that the fungi group weighed more at eight weeks.

812. Easy

While researching a paper, a student took the following notes:

- Subject studied: pigment on an outdoor fresco.
- Researcher: Dr. Irene Solano.
- Result reported: the sunny red sections had lightened more than the sunny earth-colored sections.
- Caution the researcher notes: she did not remove any pigment for a laboratory test.
- A later observation: A shaded red section had barely lightened.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Solano reports that it was not the case that the sunny red sections had lightened more than the sunny earth-colored sections.
- B) Solano cautions that she did not remove any pigment for a laboratory test.
- C) Solano reports that the sunny red sections had lightened more than the sunny earth-colored sections.
- D) A shaded red section had barely lightened, and Solano cautions that she did not remove any pigment for a laboratory test.

813. Easy

While researching a paper, a student took the following notes:

- Subject studied: dust layers in an ice core.
- Researcher: Dr. Ellen Zhou.
- Result reported: the thickest dust layers fell in years the notes call dry.
- Caution the researcher notes: the core does not name the source of every grain of dust.
- A later observation: A thick layer also appears in a year the notes call wet and windy.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Zhou reports that it was not the case that the thickest dust layers fell in years the notes call dry.
- B) Zhou cautions that the core does not name the source of every grain of dust.
- C) A thick layer also appears in a year the notes call wet and windy, and Zhou cautions that the core does not name the source of every grain of dust.
- D) Zhou reports that the thickest dust layers fell in years the notes call dry.

814. Easy

While researching a paper, a student took the following notes:

- Subject studied: a reminder text and missed clinic appointments.
- Researcher: Dr. Rachel Stein.
- Result reported: the texting clinics had a lower miss rate.
- Caution the researcher notes: the comparison does not isolate the text from the new evening hour.
- A later observation: The texting clinics also added an evening hour in the same month.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Stein reports that it was not the case that the texting clinics had a lower miss rate.
- B) Stein cautions that the comparison does not isolate the text from the new evening hour.
- C) The texting clinics also added an evening hour in the same month, and Stein cautions that the comparison does not isolate the text from the new evening hour.
- D) Stein reports that the texting clinics had a lower miss rate.

815. Easy

While researching a paper, a student took the following notes:

- Subject studied: audience copies of a poem and library loans of the same book.
- Researcher: Dr. Angela Brooks.
- Result reported: the loan count was higher in the month after the reading than in the month before.
- Caution the researcher notes: the loan records do not show whether the borrowers attended the reading.
- A later observation: A second reading in another city was followed by a similar brief rise.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Brooks cautions that the loan records do not show whether the borrowers attended the reading.
- B) Brooks reports that the loan count was higher in the month after the reading than in the month before.
- C) A second reading in another city was followed by a similar brief rise, and Brooks cautions that the loan records do not show whether the borrowers attended the reading.
- D) Brooks reports that it was not the case that the loan count was higher in the month after the reading than in the month before.

816. Easy

While researching a paper, a student took the following notes:

- Subject studied: tutoring hours and a skills quiz.
- Researcher: Dr. Olivia Grant.
- Result reported: higher hours lined up with higher scores.
- Caution the researcher notes: the log does not show that the tutoring produced the scores.
- A later observation: Students with high scores the week before also tended to attend more hours.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Grant reports that higher hours lined up with higher scores.
- B) Students with high scores the week before also tended to attend more hours, and Grant cautions that the log does not show that the tutoring produced the scores.
- C) Grant cautions that the log does not show that the tutoring produced the scores.
- D) Grant reports that it was not the case that higher hours lined up with higher scores.

817. Easy

While researching a paper, a student took the following notes:

- Subject studied: a windbreak of shrubs beside crop rows.
- Researcher: Dr. Hassan Ali.
- Result reported: the rows nearest the shrubs lost less soil than the open rows.
- Caution the researcher notes: he did not measure the crop's yield.
- A later observation: Rows upwind of the shrubs, with no shelter, lost as much as the open rows.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ali reports that it was not the case that the rows nearest the shrubs lost less soil than the open rows.
- B) Ali cautions that he did not measure the crop's yield.
- C) Ali reports that the rows nearest the shrubs lost less soil than the open rows.
- D) Rows upwind of the shrubs, with no shelter, lost as much as the open rows, and Ali cautions that he did not measure the crop's yield.

818. Easy

While researching a paper, a student took the following notes:

- Subject studied: a cap on class size in an after-school program.
- Researcher: Dr. Christine Dahl.
- Result reported: the smaller sections finished a larger share of students.
- Caution the researcher notes: the comparison does not separate class size from the instructor.
- A later observation: The smaller sections were also taught by the most experienced instructors.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Dahl reports that it was not the case that the smaller sections finished a larger share of students.
- B) Dahl cautions that the comparison does not separate class size from the instructor.
- C) The smaller sections were also taught by the most experienced instructors, and Dahl cautions that the comparison does not separate class size from the instructor.
- D) Dahl reports that the smaller sections finished a larger share of students.

819. Easy

While researching a paper, a student took the following notes:

- Subject studied: ration cards and a grocer's ledger from 1943.
- Researcher: Dr. Anita Shah.
- Result reported: sugar sales were higher on the inspection days.
- Caution the researcher notes: the ledger cannot show that inspectors caused shoppers to buy.
- A later observation: Tea sales, which were not rationed, did not rise on those days.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Shah reports that sugar sales were higher on the inspection days.
- B) Tea sales, which were not rationed, did not rise on those days, and Shah cautions that the ledger cannot show that inspectors caused shoppers to buy.
- C) Shah cautions that the ledger cannot show that inspectors caused shoppers to buy.
- D) Shah reports that it was not the case that sugar sales were higher on the inspection days.

820. Medium

While researching a paper, a student took the following notes:

- Subject studied: kelp forests along the California coast.
- Researcher: Dr. Elena Voss.
- Result reported: juvenile counts were higher in standing kelp than on bare rock.
- Caution the researcher notes: the divers did not count adult rockfish.
- A later observation: After a storm stripped the kelp from one cove, the juvenile count in that cove fell.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Voss reports that juvenile counts were higher in standing kelp than on bare rock, which removes any need for caution about the finding.
- B) Voss reports that it was not the case that juvenile counts were higher in standing kelp than on bare rock.
- C) After a storm stripped the kelp from one cove, the juvenile count in that cove fell.
- D) Voss reports that juvenile counts were higher in standing kelp than on bare rock, but cautions that the divers did not count adult rockfish.

821. Medium

While researching a paper, a student took the following notes:

- Subject studied: afternoon pavement temperatures in one neighborhood.
- Researcher: Dr. Priya Raman.
- Result reported: pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- Caution the researcher notes: she did not measure temperatures inside houses.
- A later observation: After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Raman reports that it was not the case that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- B) Raman cautions that she did not measure temperatures inside houses.
- C) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- D) After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before, and Raman cautions that she did not measure temperatures inside houses.

822. Medium

While researching a paper, a student took the following notes:

- Subject studied: iron-gall ink on nineteenth-century letters.
- Researcher: Dr. Helen Cho.
- Result reported: the inked lines were often the places where the paper had cracked or fallen out.
- Caution the researcher notes: she did not test modern inks.
- A later observation: Letters written in pencil on the same desks showed no such holes.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Cho reports that it was not the case that the inked lines were often the places where the paper had cracked or fallen out.
- B) Letters written in pencil on the same desks showed no such holes.
- C) Cho reports that the inked lines were often the places where the paper had cracked or fallen out, which removes any need for caution about the finding.
- D) Cho reports that the inked lines were often the places where the paper had cracked or fallen out, but cautions that she did not test modern inks.

823. Medium

While researching a paper, a student took the following notes:

- Subject studied: iron-gall ink on nineteenth-century letters.
- Researcher: Dr. Helen Cho.
- Result reported: the inked lines were often the places where the paper had cracked or fallen out.
- Caution the researcher notes: she did not test modern inks.
- A later observation: Letters written in pencil on the same desks showed no such holes.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Cho cautions that she did not test modern inks.
- B) Cho reports that the inked lines were often the places where the paper had cracked or fallen out.
- C) Letters written in pencil on the same desks showed no such holes, and Cho cautions that she did not test modern inks.
- D) Cho reports that it was not the case that the inked lines were often the places where the paper had cracked or fallen out.

824. Medium

While researching a paper, a student took the following notes:

- Subject studied: bees in rooftop hives and in a suburban park.
- Researcher: Dr. Imani Cole.
- Result reported: the rooftop count was higher than the park count.
- Caution the researcher notes: one year cannot show whether the city is safer for bees over time.
- A later observation: The same rooftops had lower counts during a week of heavy smoke.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Cole reports that it was not the case that the rooftop count was higher than the park count.
- B) Cole reports that the rooftop count was higher than the park count, but cautions that one year cannot show whether the city is safer for bees over time.
- C) The same rooftops had lower counts during a week of heavy smoke.
- D) Cole reports that the rooftop count was higher than the park count, which removes any need for caution about the finding.

825. Medium

While researching a paper, a student took the following notes:

- Subject studied: bees in rooftop hives and in a suburban park.
- Researcher: Dr. Imani Cole.
- Result reported: the rooftop count was higher than the park count.
- Caution the researcher notes: one year cannot show whether the city is safer for bees over time.
- A later observation: The same rooftops had lower counts during a week of heavy smoke.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Cole reports that the rooftop count was higher than the park count.
- B) Cole cautions that one year cannot show whether the city is safer for bees over time.
- C) The same rooftops had lower counts during a week of heavy smoke, and Cole cautions that one year cannot show whether the city is safer for bees over time.
- D) Cole reports that it was not the case that the rooftop count was higher than the park count.

826. Medium

While researching a paper, a student took the following notes:

- Subject studied: turnout in a local election.
- Researcher: Dr. Nina Patel.
- Result reported: turnout was higher in the precincts that received the postcard.
- Caution the researcher notes: the study cannot show that every recipient read the card.
- A later observation: The gap was larger in precincts that had low turnout the year before.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) The gap was larger in precincts that had low turnout the year before, and Patel cautions that the study cannot show that every recipient read the card.
- B) Patel reports that it was not the case that turnout was higher in the precincts that received the postcard.
- C) Patel cautions that the study cannot show that every recipient read the card.
- D) Patel reports that turnout was higher in the precincts that received the postcard.

827. Medium

While researching a paper, a student took the following notes:

- Subject studied: algae on a melting glacier.
- Researcher: Dr. Andrei Sokolov.
- Result reported: plots with more algae lost more ice that week than plots with less algae.
- Caution the researcher notes: the team did not compare air temperatures above the plots.
- A later observation: When the algae was washed off one plot, that plot's melt slowed.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Sokolov reports that plots with more algae lost more ice that week than plots with less algae, which removes any need for caution about the finding.
- B) Sokolov reports that it was not the case that plots with more algae lost more ice that week than plots with less algae.
- C) When the algae was washed off one plot, that plot's melt slowed.
- D) Sokolov reports that plots with more algae lost more ice that week than plots with less algae, but cautions that the team did not compare air temperatures above the plots.

828. Medium

While researching a paper, a student took the following notes:

- Subject studied: students who switch languages during class discussion.
- Researcher: Dr. Grace Adeyemi.
- Result reported: summaries from students who had switched languages scored as high as summaries from students who had not.
- Caution the researcher notes: the study did not score spoken answers on the exam.
- A later observation: Teachers who had expected confusion found the written work orderly.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Adeyemi reports that it was not the case that summaries from students who had switched languages scored as high as summaries from students who had not.
- B) Adeyemi cautions that the study did not score spoken answers on the exam.
- C) Teachers who had expected confusion found the written work orderly, and Adeyemi cautions that the study did not score spoken answers on the exam.
- D) Adeyemi reports that summaries from students who had switched languages scored as high as summaries from students who had not.

829. Medium

While researching a paper, a student took the following notes:

- Subject studied: clay pots from a riverside workshop.
- Researcher: Dr. Marco Bell.
- Result reported: fewer shell-tempered pots cracked than sand-tempered pots.
- Caution the researcher notes: he did not test whether the pots survived later use over a fire.
- A later observation: Pots with no temper at all cracked most often.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Bell cautions that he did not test whether the pots survived later use over a fire.
- B) Bell reports that it was not the case that fewer shell-tempered pots cracked than sand-tempered pots.
- C) Bell reports that fewer shell-tempered pots cracked than sand-tempered pots.
- D) Pots with no temper at all cracked most often, and Bell cautions that he did not test whether the pots survived later use over a fire.

830. Medium

While researching a paper, a student took the following notes:

- Subject studied: a reef after a heat wave.
- Researcher: Dr. Nora Feldman.
- Result reported: colonies that kept their algae stayed darker than colonies that expelled them.
- Caution the researcher notes: the divers did not measure fish counts on the reef.
- A later observation: The following cool month, some pale colonies regained color as algae returned.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them, which removes any need for caution about the finding.
- B) The following cool month, some pale colonies regained color as algae returned.
- C) Feldman reports that it was not the case that colonies that kept their algae stayed darker than colonies that expelled them.
- D) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them, but cautions that the divers did not measure fish counts on the reef.

831. Medium

While researching a paper, a student took the following notes:

- Subject studied: a reef after a heat wave.
- Researcher: Dr. Nora Feldman.
- Result reported: colonies that kept their algae stayed darker than colonies that expelled them.
- Caution the researcher notes: the divers did not measure fish counts on the reef.
- A later observation: The following cool month, some pale colonies regained color as algae returned.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) The following cool month, some pale colonies regained color as algae returned, and Feldman cautions that the divers did not measure fish counts on the reef.
- B) Feldman cautions that the divers did not measure fish counts on the reef.
- C) Feldman reports that it was not the case that colonies that kept their algae stayed darker than colonies that expelled them.
- D) Feldman reports that colonies that kept their algae stayed darker than colonies that expelled them.

832. Medium

While researching a paper, a student took the following notes:

- Subject studied: wax-cylinder recordings from the 1890s.
- Researcher: Dr. Ruth Adelman.
- Result reported: more words were intelligible on the cool-room cylinders than on the attic cylinders.
- Caution the researcher notes: she did not compare cylinders of music with cylinders of speech.
- A later observation: A cylinder moved from an attic to a cool room did not regain the words already lost.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Adelman reports that it was not the case that more words were intelligible on the cool-room cylinders than on the attic cylinders.
- B) A cylinder moved from an attic to a cool room did not regain the words already lost, and Adelman cautions that she did not compare cylinders of music with cylinders of speech.
- C) Adelman cautions that she did not compare cylinders of music with cylinders of speech.
- D) Adelman reports that more words were intelligible on the cool-room cylinders than on the attic cylinders.

833. Medium

While researching a paper, a student took the following notes:

- Subject studied: small loans to market vendors.
- Researcher: Dr. Fatima Noor.
- Result reported: a larger share of the loan group was still trading after six months.
- Caution the researcher notes: the study does not show that every loan was spent on the business.
- A later observation: The gap was smaller among vendors who already had a stall of their own.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) The gap was smaller among vendors who already had a stall of their own.
- B) Noor reports that a larger share of the loan group was still trading after six months, but cautions that the study does not show that every loan was spent on the business.
- C) Noor reports that it was not the case that a larger share of the loan group was still trading after six months.
- D) Noor reports that a larger share of the loan group was still trading after six months, which removes any need for caution about the finding.

834. Medium

While researching a paper, a student took the following notes:

- Subject studied: summer surface temperatures under city trees.
- Researcher: Dr. Camille Duval.
- Result reported: blocks with more canopy had cooler midday surfaces.
- Caution the researcher notes: the team did not measure winter temperatures.
- A later observation: A block that lost canopy to pruning warmed the next summer.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Duval reports that blocks with more canopy had cooler midday surfaces.
- B) Duval reports that it was not the case that blocks with more canopy had cooler midday surfaces.
- C) A block that lost canopy to pruning warmed the next summer, and Duval cautions that the team did not measure winter temperatures.
- D) Duval cautions that the team did not measure winter temperatures.

835. Medium

While researching a paper, a student took the following notes:

- Subject studied: rehearsal notes for a 1936 production.
- Researcher: Dr. Alice Peng.
- Result reported: the cut scene was the one marked 'too long' in the director's hand.
- Caution the researcher notes: the notes do not say whether audiences liked the shorter version.
- A later observation: A later revival restored the scene and ran past two hours.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) A later revival restored the scene and ran past two hours.
- B) Peng reports that the cut scene was the one marked 'too long' in the director's hand, but cautions that the notes do not say whether audiences liked the shorter version.
- C) Peng reports that it was not the case that the cut scene was the one marked 'too long' in the director's hand.
- D) Peng reports that the cut scene was the one marked 'too long' in the director's hand, which removes any need for caution about the finding.

836. Medium

While researching a paper, a student took the following notes:

- Subject studied: rehearsal notes for a 1936 production.
- Researcher: Dr. Alice Peng.
- Result reported: the cut scene was the one marked 'too long' in the director's hand.
- Caution the researcher notes: the notes do not say whether audiences liked the shorter version.
- A later observation: A later revival restored the scene and ran past two hours.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Peng cautions that the notes do not say whether audiences liked the shorter version.
- B) Peng reports that it was not the case that the cut scene was the one marked 'too long' in the director's hand.
- C) Peng reports that the cut scene was the one marked 'too long' in the director's hand.
- D) A later revival restored the scene and ran past two hours, and Peng cautions that the notes do not say whether audiences liked the shorter version.

837. Medium

While researching a paper, a student took the following notes:

- Subject studied: willows in a valley where wolves had returned.
- Researcher: Dr. Rosa Nguyen.
- Result reported: banks with fewer signs of browsing had taller willow seedlings.
- Caution the researcher notes: she did not measure bird nests in the willows.
- A later observation: A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings, which removes any need for caution about the finding.
- B) Nguyen reports that it was not the case that banks with fewer signs of browsing had taller willow seedlings.
- C) A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.
- D) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings, but cautions that she did not measure bird nests in the willows.

838. Medium

While researching a paper, a student took the following notes:

- Subject studied: willows in a valley where wolves had returned.
- Researcher: Dr. Rosa Nguyen.
- Result reported: banks with fewer signs of browsing had taller willow seedlings.
- Caution the researcher notes: she did not measure bird nests in the willows.
- A later observation: A fenced plot that excluded browsers grew tall willows even before wolf numbers rose.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) A fenced plot that excluded browsers grew tall willows even before wolf numbers rose, and Nguyen cautions that she did not measure bird nests in the willows.
- B) Nguyen reports that it was not the case that banks with fewer signs of browsing had taller willow seedlings.
- C) Nguyen cautions that she did not measure bird nests in the willows.
- D) Nguyen reports that banks with fewer signs of browsing had taller willow seedlings.

839. Medium

While researching a paper, a student took the following notes:

- Subject studied: homework hours and quiz scores in one course.
- Researcher: Dr. Hannah Weiss.
- Result reported: students with more reported hours had higher scores on average.
- Caution the researcher notes: the study did not observe whether the reported hours were accurate.
- A later observation: The top scores also belonged to students who had scored high before the homework was assigned.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) The top scores also belonged to students who had scored high before the homework was assigned, and Weiss cautions that the study did not observe whether the reported hours were accurate.
- B) Weiss reports that it was not the case that students with more reported hours had higher scores on average.
- C) Weiss reports that students with more reported hours had higher scores on average.
- D) Weiss cautions that the study did not observe whether the reported hours were accurate.

840. Medium

While researching a paper, a student took the following notes:

- Subject studied: a restored wetland beside a river.
- Researcher: Dr. Leo Martins.
- Result reported: the wetland depth rose while the road remained dry.
- Caution the researcher notes: the gauges were not left in place over the winter.
- A later observation: In a larger storm the wetland filled and the road flooded anyway.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Martins reports that the wetland depth rose while the road remained dry, but cautions that the gauges were not left in place over the winter.
- B) Martins reports that the wetland depth rose while the road remained dry, which removes any need for caution about the finding.
- C) Martins reports that it was not the case that the wetland depth rose while the road remained dry.
- D) In a larger storm the wetland filled and the road flooded anyway.

841. Medium

While researching a paper, a student took the following notes:

- Subject studied: a mill town in the 1840s.
- Researcher: Dr. Patrick Doyle.
- Result reported: the letters name start and end times that add up to more hours than the notice lists.
- Caution the researcher notes: he found no letters from the mill owner about the schedule.
- A later observation: A company ledger of wages for piecework does not list hours at all.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Doyle cautions that he found no letters from the mill owner about the schedule.
- B) Doyle reports that the letters name start and end times that add up to more hours than the notice lists.
- C) A company ledger of wages for piecework does not list hours at all, and Doyle cautions that he found no letters from the mill owner about the schedule.
- D) Doyle reports that it was not the case that the letters name start and end times that add up to more hours than the notice lists.

842. Medium

While researching a paper, a student took the following notes:

- Subject studied: passive voice in lab reports.
- Researcher: Dr. Sophie Bernard.
- Result reported: readers rated the passive versions as more certain.
- Caution the researcher notes: she did not test whether scientists themselves prefer one voice.
- A later observation: When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Bernard reports that it was not the case that readers rated the passive versions as more certain.
- B) Bernard reports that readers rated the passive versions as more certain, which removes any need for caution about the finding.
- C) Bernard reports that readers rated the passive versions as more certain, but cautions that she did not test whether scientists themselves prefer one voice.
- D) When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

843. Medium

While researching a paper, a student took the following notes:

- Subject studied: passive voice in lab reports.
- Researcher: Dr. Sophie Bernard.
- Result reported: readers rated the passive versions as more certain.
- Caution the researcher notes: she did not test whether scientists themselves prefer one voice.
- A later observation: When she told a second group of readers to look only at the numbers, the ratings of certainty evened out.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Bernard reports that readers rated the passive versions as more certain.
- B) When she told a second group of readers to look only at the numbers, the ratings of certainty evened out, and Bernard cautions that she did not test whether scientists themselves prefer one voice.
- C) Bernard cautions that she did not test whether scientists themselves prefer one voice.
- D) Bernard reports that it was not the case that readers rated the passive versions as more certain.

844. Medium

While researching a paper, a student took the following notes:

- Subject studied: murals painted for public buildings in the 1930s.
- Researcher: Dr. June Harlow.
- Result reported: the sketches show occupations named in the contracts, such as harvesting and mill work.
- Caution the researcher notes: she did not interview anyone who watched the murals being painted.
- A later observation: A mural whose contract has been lost shows a similar harvest scene.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Harlow reports that the sketches show occupations named in the contracts, such as harvesting and mill work, which removes any need for caution about the finding.
- B) A mural whose contract has been lost shows a similar harvest scene.
- C) Harlow reports that the sketches show occupations named in the contracts, such as harvesting and mill work, but cautions that she did not interview anyone who watched the murals being painted.
- D) Harlow reports that it was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.

845. Medium

While researching a paper, a student took the following notes:

- Subject studied: murals painted for public buildings in the 1930s.
- Researcher: Dr. June Harlow.
- Result reported: the sketches show occupations named in the contracts, such as harvesting and mill work.
- Caution the researcher notes: she did not interview anyone who watched the murals being painted.
- A later observation: A mural whose contract has been lost shows a similar harvest scene.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Harlow reports that the sketches show occupations named in the contracts, such as harvesting and mill work.
- B) Harlow cautions that she did not interview anyone who watched the murals being painted.
- C) Harlow reports that it was not the case that the sketches show occupations named in the contracts, such as harvesting and mill work.
- D) A mural whose contract has been lost shows a similar harvest scene, and Harlow cautions that she did not interview anyone who watched the murals being painted.

846. Medium

While researching a paper, a student took the following notes:

- Subject studied: fields farmed without plowing.
- Researcher: Dr. Tanya Brooks.
- Result reported: less soil was caught below the no-till fields.
- Caution the researcher notes: she did not measure the crop yield.
- A later observation: After the no-till fields were plowed for a new crop, the next storm carried more soil.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Brooks reports that it was not the case that less soil was caught below the no-till fields.
- B) Brooks cautions that she did not measure the crop yield.
- C) After the no-till fields were plowed for a new crop, the next storm carried more soil, and Brooks cautions that she did not measure the crop yield.
- D) Brooks reports that less soil was caught below the no-till fields.

847. Medium

While researching a paper, a student took the following notes:

- Subject studied: a city that stopped charging library overdue fines.
- Researcher: Dr. Karen Ito.
- Result reported: returns of overdue books rose after fines ended.
- Caution the researcher notes: other changes, including longer open hours, happened in the same months.
- A later observation: New checkouts also rose, so the library was busier overall.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) New checkouts also rose, so the library was busier overall.
- B) Ito reports that returns of overdue books rose after fines ended, but cautions that other changes, including longer open hours, happened in the same months.
- C) Ito reports that returns of overdue books rose after fines ended, which removes any need for caution about the finding.
- D) Ito reports that it was not the case that returns of overdue books rose after fines ended.

848. Medium

While researching a paper, a student took the following notes:

- Subject studied: range of electric delivery vans in cold weather.
- Researcher: Dr. Omar Farid.
- Result reported: miles per charge were lower when the morning temperature was lower.
- Caution the researcher notes: the logs do not separate highway miles from city miles.
- A later observation: Using a garage that kept the vans warm overnight reduced the loss.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Farid reports that miles per charge were lower when the morning temperature was lower.
- B) Using a garage that kept the vans warm overnight reduced the loss, and Farid cautions that the logs do not separate highway miles from city miles.
- C) Farid cautions that the logs do not separate highway miles from city miles.
- D) Farid reports that it was not the case that miles per charge were lower when the morning temperature was lower.

849. Medium

While researching a paper, a student took the following notes:

- Subject studied: a 1602 coastal chart.
- Researcher: Dr. Clara Mendes.
- Result reported: the bay drawn in 1602 sits east of the bay on the later survey.
- Caution the researcher notes: she did not claim the coastline itself had moved.
- A later observation: A note on the 1602 chart says the bay was sketched from a moving ship.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Mendes reports that the bay drawn in 1602 sits east of the bay on the later survey, but cautions that she did not claim the coastline itself had moved.
- B) A note on the 1602 chart says the bay was sketched from a moving ship.
- C) Mendes reports that it was not the case that the bay drawn in 1602 sits east of the bay on the later survey.
- D) Mendes reports that the bay drawn in 1602 sits east of the bay on the later survey, which removes any need for caution about the finding.

850. Medium

While researching a paper, a student took the following notes:

- Subject studied: a 1602 coastal chart.
- Researcher: Dr. Clara Mendes.
- Result reported: the bay drawn in 1602 sits east of the bay on the later survey.
- Caution the researcher notes: she did not claim the coastline itself had moved.
- A later observation: A note on the 1602 chart says the bay was sketched from a moving ship.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Mendes cautions that she did not claim the coastline itself had moved.
- B) Mendes reports that the bay drawn in 1602 sits east of the bay on the later survey.
- C) Mendes reports that it was not the case that the bay drawn in 1602 sits east of the bay on the later survey.
- D) A note on the 1602 chart says the bay was sketched from a moving ship, and Mendes cautions that she did not claim the coastline itself had moved.

851. Medium

While researching a paper, a student took the following notes:

- Subject studied: compost piles and weed seeds.
- Researcher: Dr. Yara Hassan.
- Result reported: fewer seeds sprouted from the hot center than from the cool edge.
- Caution the researcher notes: she did not test crop seeds that a gardener might want to survive.
- A later observation: Seeds held at the same high temperature in an oven also failed to sprout.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Hassan reports that it was not the case that fewer seeds sprouted from the hot center than from the cool edge.
- B) Hassan reports that fewer seeds sprouted from the hot center than from the cool edge, which removes any need for caution about the finding.
- C) Seeds held at the same high temperature in an oven also failed to sprout.
- D) Hassan reports that fewer seeds sprouted from the hot center than from the cool edge, but cautions that she did not test crop seeds that a gardener might want to survive.

852. Medium

While researching a paper, a student took the following notes:

- Subject studied: compost piles and weed seeds.
- Researcher: Dr. Yara Hassan.
- Result reported: fewer seeds sprouted from the hot center than from the cool edge.
- Caution the researcher notes: she did not test crop seeds that a gardener might want to survive.
- A later observation: Seeds held at the same high temperature in an oven also failed to sprout.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Hassan reports that it was not the case that fewer seeds sprouted from the hot center than from the cool edge.
- B) Hassan cautions that she did not test crop seeds that a gardener might want to survive.
- C) Hassan reports that fewer seeds sprouted from the hot center than from the cool edge.
- D) Seeds held at the same high temperature in an oven also failed to sprout, and Hassan cautions that she did not test crop seeds that a gardener might want to survive.

853. Medium

While researching a paper, a student took the following notes:

- Subject studied: attendance on days when a school garden was used.
- Researcher: Dr. Emily Cho.
- Result reported: fewer students were absent on garden days.
- Caution the researcher notes: the rolls do not say whether the garden caused the attendance.
- A later observation: The garden days were also days when a popular teacher was present.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Cho reports that it was not the case that fewer students were absent on garden days.
- B) Cho reports that fewer students were absent on garden days.
- C) Cho cautions that the rolls do not say whether the garden caused the attendance.
- D) The garden days were also days when a popular teacher was present, and Cho cautions that the rolls do not say whether the garden caused the attendance.

854. Medium

While researching a paper, a student took the following notes:

- Subject studied: seedlings grown with soil fungi.
- Researcher: Dr. Paolo Ricci.
- Result reported: the fungi group weighed more at eight weeks.
- Caution the researcher notes: he did not measure the seedlings' survival through winter.
- A later observation: When he sterilized the soil after four weeks, the weight gap stopped growing.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ricci reports that the fungi group weighed more at eight weeks, which removes any need for caution about the finding.
- B) When he sterilized the soil after four weeks, the weight gap stopped growing.
- C) Ricci reports that the fungi group weighed more at eight weeks, but cautions that he did not measure the seedlings' survival through winter.
- D) Ricci reports that it was not the case that the fungi group weighed more at eight weeks.

855. Medium

While researching a paper, a student took the following notes:

- Subject studied: a newspaper and a diary from the week of a town fire.
- Researcher: Dr. Lydia Grant.
- Result reported: the diary's Tuesday entry describes the fire, and the headline says Thursday.
- Caution the researcher notes: she does not know which document was written first on the day itself.
- A later observation: A later correction in the newspaper moves the date to Tuesday.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Grant reports that the diary's Tuesday entry describes the fire, and the headline says Thursday.
- B) Grant reports that it was not the case that the diary's Tuesday entry describes the fire, and the headline says Thursday.
- C) A later correction in the newspaper moves the date to Tuesday, and Grant cautions that she does not know which document was written first on the day itself.
- D) Grant cautions that she does not know which document was written first on the day itself.

856. Medium

While researching a paper, a student took the following notes:

- Subject studied: a reading-speed test of two typefaces.
- Researcher: Dr. Sara Lind.
- Result reported: average times for the two typefaces were nearly the same.
- Caution the researcher notes: the study did not include children.
- A later observation: Readers did report a preference, even though their speeds matched.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Lind reports that it was not the case that average times for the two typefaces were nearly the same.
- B) Lind cautions that the study did not include children.
- C) Readers did report a preference, even though their speeds matched, and Lind cautions that the study did not include children.
- D) Lind reports that average times for the two typefaces were nearly the same.

857. Medium

While researching a paper, a student took the following notes:

- Subject studied: helmet use and head injuries in a city bike-share program.
- Researcher: Dr. Brian Holt.
- Result reported: helmeted riders reported fewer head injuries than riders who reported no helmet.
- Caution the researcher notes: the survey cannot separate the helmet from the other habits of the riders who wear one.
- A later observation: Helmeted riders also reported slower average speeds.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Helmeted riders also reported slower average speeds.
- B) Holt reports that helmeted riders reported fewer head injuries than riders who reported no helmet, which removes any need for caution about the finding.
- C) Holt reports that helmeted riders reported fewer head injuries than riders who reported no helmet, but cautions that the survey cannot separate the helmet from the other habits of the riders who wear one.
- D) Holt reports that it was not the case that helmeted riders reported fewer head injuries than riders who reported no helmet.

858. Medium

While researching a paper, a student took the following notes:

- Subject studied: helmet use and head injuries in a city bike-share program.
- Researcher: Dr. Brian Holt.
- Result reported: helmeted riders reported fewer head injuries than riders who reported no helmet.
- Caution the researcher notes: the survey cannot separate the helmet from the other habits of the riders who wear one.
- A later observation: Helmeted riders also reported slower average speeds.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Helmeted riders also reported slower average speeds, and Holt cautions that the survey cannot separate the helmet from the other habits of the riders who wear one.
- B) Holt reports that helmeted riders reported fewer head injuries than riders who reported no helmet.
- C) Holt cautions that the survey cannot separate the helmet from the other habits of the riders who wear one.
- D) Holt reports that it was not the case that helmeted riders reported fewer head injuries than riders who reported no helmet.

859. Medium

While researching a paper, a student took the following notes:

- Subject studied: salt and dried food in a ship's log.
- Researcher: Dr. Margaret Poe.
- Result reported: the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.
- Caution the researcher notes: the log is not a controlled experiment.
- A later observation: A barrel that got wet was called spoiled even though it had been heavily salted.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Poe cautions that the log is not a controlled experiment.
- B) Poe reports that it was not the case that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.
- C) Poe reports that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.
- D) A barrel that got wet was called spoiled even though it had been heavily salted, and Poe cautions that the log is not a controlled experiment.

860. Medium

While researching a paper, a student took the following notes:

- Subject studied: dust layers in an ice core.
- Researcher: Dr. Ellen Zhou.
- Result reported: the thickest dust layers fell in years the notes call dry.
- Caution the researcher notes: the core does not name the source of every grain of dust.
- A later observation: A thick layer also appears in a year the notes call wet and windy.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Zhou reports that it was not the case that the thickest dust layers fell in years the notes call dry.
- B) A thick layer also appears in a year the notes call wet and windy.
- C) Zhou reports that the thickest dust layers fell in years the notes call dry, which removes any need for caution about the finding.
- D) Zhou reports that the thickest dust layers fell in years the notes call dry, but cautions that the core does not name the source of every grain of dust.

861. Medium

While researching a paper, a student took the following notes:

- Subject studied: a nineteenth-century school that restricted sign language.
- Researcher: Dr. Charles Ito.
- Result reported: the marks in those subjects were lower in the restriction years.
- Caution the researcher notes: the reports do not record what families thought of the rule.
- A later observation: Marks in drawing, which had not been taught in sign, stayed about the same.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ito reports that the marks in those subjects were lower in the restriction years.
- B) Ito reports that it was not the case that the marks in those subjects were lower in the restriction years.
- C) Ito cautions that the reports do not record what families thought of the rule.
- D) Marks in drawing, which had not been taught in sign, stayed about the same, and Ito cautions that the reports do not record what families thought of the rule.

862. Medium

While researching a paper, a student took the following notes:

- Subject studied: desert varnish on sunlit rocks.
- Researcher: Dr. Nadia Korol.
- Result reported: rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- Caution the researcher notes: she did not determine whether microbes or chemistry laid the varnish down.
- A later observation: A rock newly exposed by a slide had almost no varnish.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Korol reports that rocks that dried slowly had thicker varnish than rocks that dried within an hour, which removes any need for caution about the finding.
- B) A rock newly exposed by a slide had almost no varnish.
- C) Korol reports that it was not the case that rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- D) Korol reports that rocks that dried slowly had thicker varnish than rocks that dried within an hour, but cautions that she did not determine whether microbes or chemistry laid the varnish down.

863. Medium

While researching a paper, a student took the following notes:

- Subject studied: desert varnish on sunlit rocks.
- Researcher: Dr. Nadia Korol.
- Result reported: rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- Caution the researcher notes: she did not determine whether microbes or chemistry laid the varnish down.
- A later observation: A rock newly exposed by a slide had almost no varnish.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Korol reports that it was not the case that rocks that dried slowly had thicker varnish than rocks that dried within an hour.
- B) Korol cautions that she did not determine whether microbes or chemistry laid the varnish down.
- C) A rock newly exposed by a slide had almost no varnish, and Korol cautions that she did not determine whether microbes or chemistry laid the varnish down.
- D) Korol reports that rocks that dried slowly had thicker varnish than rocks that dried within an hour.

864. Medium

While researching a paper, a student took the following notes:

- Subject studied: recipes in an eighteenth-century household book.
- Researcher: Dr. Sylvia Markham.
- Result reported: winter recipes list dried fruit more often and fresh herbs less often.
- Caution the researcher notes: the book does not say which recipes were actually cooked.
- A later observation: A recipe with no season marked uses both.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Markham reports that winter recipes list dried fruit more often and fresh herbs less often, which removes any need for caution about the finding.
- B) Markham reports that it was not the case that winter recipes list dried fruit more often and fresh herbs less often.
- C) Markham reports that winter recipes list dried fruit more often and fresh herbs less often, but cautions that the book does not say which recipes were actually cooked.
- D) A recipe with no season marked uses both.

865. Medium

While researching a paper, a student took the following notes:

- Subject studied: recipes in an eighteenth-century household book.
- Researcher: Dr. Sylvia Markham.
- Result reported: winter recipes list dried fruit more often and fresh herbs less often.
- Caution the researcher notes: the book does not say which recipes were actually cooked.
- A later observation: A recipe with no season marked uses both.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Markham reports that winter recipes list dried fruit more often and fresh herbs less often.
- B) Markham reports that it was not the case that winter recipes list dried fruit more often and fresh herbs less often.
- C) A recipe with no season marked uses both, and Markham cautions that the book does not say which recipes were actually cooked.
- D) Markham cautions that the book does not say which recipes were actually cooked.

866. Medium

While researching a paper, a student took the following notes:

- Subject studied: nesting success of a shorebird.
- Researcher: Dr. Thomas Berger.
- Result reported: a larger share of the distant nests hatched.
- Caution the researcher notes: the volunteers did not band the adult birds.
- A later observation: When the path was closed for a month, nests beside it hatched as often as distant nests.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) When the path was closed for a month, nests beside it hatched as often as distant nests, and Berger cautions that the volunteers did not band the adult birds.
- B) Berger reports that it was not the case that a larger share of the distant nests hatched.
- C) Berger cautions that the volunteers did not band the adult birds.
- D) Berger reports that a larger share of the distant nests hatched.

867. Medium

While researching a paper, a student took the following notes:

- Subject studied: audience copies of a poem and library loans of the same book.
- Researcher: Dr. Angela Brooks.
- Result reported: the loan count was higher in the month after the reading than in the month before.
- Caution the researcher notes: the loan records do not show whether the borrowers attended the reading.
- A later observation: A second reading in another city was followed by a similar brief rise.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) A second reading in another city was followed by a similar brief rise.
- B) Brooks reports that the loan count was higher in the month after the reading than in the month before, which removes any need for caution about the finding.
- C) Brooks reports that it was not the case that the loan count was higher in the month after the reading than in the month before.
- D) Brooks reports that the loan count was higher in the month after the reading than in the month before, but cautions that the loan records do not show whether the borrowers attended the reading.

868. Medium

While researching a paper, a student took the following notes:

- Subject studied: batteries stored at different states of charge.
- Researcher: Dr. Ingrid Solberg.
- Result reported: the half-charged batteries lost less capacity.
- Caution the researcher notes: she did not test batteries made by another manufacturer.
- A later observation: Batteries stored in a hot shed lost capacity regardless of the charge level.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Solberg reports that the half-charged batteries lost less capacity.
- B) Batteries stored in a hot shed lost capacity regardless of the charge level, and Solberg cautions that she did not test batteries made by another manufacturer.
- C) Solberg reports that it was not the case that the half-charged batteries lost less capacity.
- D) Solberg cautions that she did not test batteries made by another manufacturer.

869. Medium

While researching a paper, a student took the following notes:

- Subject studied: ship manifests and a passenger diary from 1850.
- Researcher: Dr. William Drake.
- Result reported: the diary lists three children and the manifest lists two.
- Caution the researcher notes: he cannot tell whether a child was born during the voyage.
- A later observation: A later manifest from the same ship, filed at a second port, lists three.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) A later manifest from the same ship, filed at a second port, lists three.
- B) Drake reports that the diary lists three children and the manifest lists two, but cautions that he cannot tell whether a child was born during the voyage.
- C) Drake reports that the diary lists three children and the manifest lists two, which removes any need for caution about the finding.
- D) Drake reports that it was not the case that the diary lists three children and the manifest lists two.

870. Medium

While researching a paper, a student took the following notes:

- Subject studied: ship manifests and a passenger diary from 1850.
- Researcher: Dr. William Drake.
- Result reported: the diary lists three children and the manifest lists two.
- Caution the researcher notes: he cannot tell whether a child was born during the voyage.
- A later observation: A later manifest from the same ship, filed at a second port, lists three.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Drake reports that it was not the case that the diary lists three children and the manifest lists two.
- B) Drake reports that the diary lists three children and the manifest lists two.
- C) A later manifest from the same ship, filed at a second port, lists three, and Drake cautions that he cannot tell whether a child was born during the voyage.
- D) Drake cautions that he cannot tell whether a child was born during the voyage.

871. Medium

While researching a paper, a student took the following notes:

- Subject studied: mussels on a rocky shore.
- Researcher: Dr. Felix Nguyen.
- Result reported: mussels lower down, in the wetter band, were larger.
- Caution the researcher notes: he did not count the birds that eat mussels.
- A later observation: After a month of unusually high tides, mussels in the higher band grew faster than before.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Nguyen reports that mussels lower down, in the wetter band, were larger, which removes any need for caution about the finding.
- B) Nguyen reports that it was not the case that mussels lower down, in the wetter band, were larger.
- C) After a month of unusually high tides, mussels in the higher band grew faster than before.
- D) Nguyen reports that mussels lower down, in the wetter band, were larger, but cautions that he did not count the birds that eat mussels.

872. Medium

While researching a paper, a student took the following notes:

- Subject studied: mussels on a rocky shore.
- Researcher: Dr. Felix Nguyen.
- Result reported: mussels lower down, in the wetter band, were larger.
- Caution the researcher notes: he did not count the birds that eat mussels.
- A later observation: After a month of unusually high tides, mussels in the higher band grew faster than before.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Nguyen cautions that he did not count the birds that eat mussels.
- B) Nguyen reports that it was not the case that mussels lower down, in the wetter band, were larger.
- C) Nguyen reports that mussels lower down, in the wetter band, were larger.
- D) After a month of unusually high tides, mussels in the higher band grew faster than before, and Nguyen cautions that he did not count the birds that eat mussels.

873. Medium

While researching a paper, a student took the following notes:

- Subject studied: captions in a museum exhibit.
- Researcher: Dr. Judith Hale.
- Result reported: a larger share of the long-caption group stated the claim accurately.
- Caution the researcher notes: she did not test whether visitors remembered the claim a week later.
- A later observation: When both captions stated the claim in the first sentence, the gap narrowed.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) When both captions stated the claim in the first sentence, the gap narrowed, and Hale cautions that she did not test whether visitors remembered the claim a week later.
- B) Hale reports that it was not the case that a larger share of the long-caption group stated the claim accurately.
- C) Hale reports that a larger share of the long-caption group stated the claim accurately.
- D) Hale cautions that she did not test whether visitors remembered the claim a week later.

874. Medium

While researching a paper, a student took the following notes:

- Subject studied: a windbreak of shrubs beside crop rows.
- Researcher: Dr. Hassan Ali.
- Result reported: the rows nearest the shrubs lost less soil than the open rows.
- Caution the researcher notes: he did not measure the crop's yield.
- A later observation: Rows upwind of the shrubs, with no shelter, lost as much as the open rows.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ali reports that the rows nearest the shrubs lost less soil than the open rows, which removes any need for caution about the finding.
- B) Rows upwind of the shrubs, with no shelter, lost as much as the open rows.
- C) Ali reports that it was not the case that the rows nearest the shrubs lost less soil than the open rows.
- D) Ali reports that the rows nearest the shrubs lost less soil than the open rows, but cautions that he did not measure the crop's yield.

875. Medium

While researching a paper, a student took the following notes:

- Subject studied: two editions of a political pamphlet from 1792.
- Researcher: Dr. Eleanor Voss.
- Result reported: the first edition names a person as responsible, and the second edition says only that mistakes were made.
- Caution the researcher notes: she does not know how many readers saw each edition.
- A later observation: A handwritten note in one copy of the second edition says 'safer'.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Voss cautions that she does not know how many readers saw each edition.
- B) Voss reports that it was not the case that the first edition names a person as responsible, and the second edition says only that mistakes were made.
- C) Voss reports that the first edition names a person as responsible, and the second edition says only that mistakes were made.
- D) A handwritten note in one copy of the second edition says 'safer', and Voss cautions that she does not know how many readers saw each edition.

876. Medium

While researching a paper, a student took the following notes:

- Subject studied: bird collisions with glass on a campus building.
- Researcher: Dr. Mei Lin.
- Result reported: treated windows had fewer recorded strikes.
- Caution the researcher notes: the count does not identify the species in every case.
- A later observation: A window left untreated in the middle of a treated row still had strikes.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Lin reports that treated windows had fewer recorded strikes, which removes any need for caution about the finding.
- B) A window left untreated in the middle of a treated row still had strikes.
- C) Lin reports that treated windows had fewer recorded strikes, but cautions that the count does not identify the species in every case.
- D) Lin reports that it was not the case that treated windows had fewer recorded strikes.

877. Medium

While researching a paper, a student took the following notes:

- Subject studied: bird collisions with glass on a campus building.
- Researcher: Dr. Mei Lin.
- Result reported: treated windows had fewer recorded strikes.
- Caution the researcher notes: the count does not identify the species in every case.
- A later observation: A window left untreated in the middle of a treated row still had strikes.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) A window left untreated in the middle of a treated row still had strikes, and Lin cautions that the count does not identify the species in every case.
- B) Lin reports that treated windows had fewer recorded strikes.
- C) Lin cautions that the count does not identify the species in every case.
- D) Lin reports that it was not the case that treated windows had fewer recorded strikes.

878. Medium

While researching a paper, a student took the following notes:

- Subject studied: rehearsal recordings of a string quartet.
- Researcher: Dr. George Salim.
- Result reported: the most repeated passage received the highest security ratings.
- Caution the researcher notes: he did not ask the players which passage they feared.
- A later observation: A passage played only once was the one listeners called unsteady.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Salim reports that it was not the case that the most repeated passage received the highest security ratings.
- B) A passage played only once was the one listeners called unsteady.
- C) Salim reports that the most repeated passage received the highest security ratings, which removes any need for caution about the finding.
- D) Salim reports that the most repeated passage received the highest security ratings, but cautions that he did not ask the players which passage they feared.

879. Medium

While researching a paper, a student took the following notes:

- Subject studied: rehearsal recordings of a string quartet.
- Researcher: Dr. George Salim.
- Result reported: the most repeated passage received the highest security ratings.
- Caution the researcher notes: he did not ask the players which passage they feared.
- A later observation: A passage played only once was the one listeners called unsteady.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Salim reports that the most repeated passage received the highest security ratings.
- B) Salim reports that it was not the case that the most repeated passage received the highest security ratings.
- C) Salim cautions that he did not ask the players which passage they feared.
- D) A passage played only once was the one listeners called unsteady, and Salim cautions that he did not ask the players which passage they feared.

880. Medium

While researching a paper, a student took the following notes:

- Subject studied: salt marsh grass and flood height.
- Researcher: Dr. Laura Kim.
- Result reported: the denser stretches had lower landward peaks.
- Caution the researcher notes: she did not measure the grass in winter.
- A later observation: Where the grass had been cut, the landward peak rose to match the open stretches.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Kim reports that the denser stretches had lower landward peaks.
- B) Kim reports that it was not the case that the denser stretches had lower landward peaks.
- C) Kim cautions that she did not measure the grass in winter.
- D) Where the grass had been cut, the landward peak rose to match the open stretches, and Kim cautions that she did not measure the grass in winter.

881. Medium

While researching a paper, a student took the following notes:

- Subject studied: ration cards and a grocer's ledger from 1943.
- Researcher: Dr. Anita Shah.
- Result reported: sugar sales were higher on the inspection days.
- Caution the researcher notes: the ledger cannot show that inspectors caused shoppers to buy.
- A later observation: Tea sales, which were not rationed, did not rise on those days.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Tea sales, which were not rationed, did not rise on those days.
- B) Shah reports that it was not the case that sugar sales were higher on the inspection days.
- C) Shah reports that sugar sales were higher on the inspection days, which removes any need for caution about the finding.
- D) Shah reports that sugar sales were higher on the inspection days, but cautions that the ledger cannot show that inspectors caused shoppers to buy.

882. Medium

While researching a paper, a student took the following notes:

- Subject studied: nest boxes facing different directions.
- Researcher: Dr. Victor Hume.
- Result reported: east-facing boxes held nesting material on earlier dates.
- Caution the researcher notes: he did not weigh the birds.
- A later observation: After a cold week, new occupancy paused for boxes in both directions.

The student wants to report the study's result only, without discussing its limits or later observations.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Hume cautions that he did not weigh the birds.
- B) Hume reports that it was not the case that east-facing boxes held nesting material on earlier dates.
- C) After a cold week, new occupancy paused for boxes in both directions, and Hume cautions that he did not weigh the birds.
- D) Hume reports that east-facing boxes held nesting material on earlier dates.

883. Medium

While researching a paper, a student took the following notes:

- Subject studied: a simplified tax notice.
- Researcher: Dr. Monica Reyes.
- Result reported: a larger share of the simplified group paid on time.
- Caution the researcher notes: the study's random assignment still left color and wording changed together.
- A later observation: The simplified notice was also printed on colored paper.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Reyes reports that it was not the case that a larger share of the simplified group paid on time.
- B) The simplified notice was also printed on colored paper.
- C) Reyes reports that a larger share of the simplified group paid on time, which removes any need for caution about the finding.
- D) Reyes reports that a larger share of the simplified group paid on time, but cautions that the study's random assignment still left color and wording changed together.

884. Hard

While researching a paper, a student took the following notes:

- Subject studied: afternoon pavement temperatures in one neighborhood.
- Researcher: Dr. Priya Raman.
- Result reported: pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- Caution the researcher notes: she did not measure temperatures inside houses.
- A later observation: After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks, but cautions that she did not measure temperatures inside houses.
- B) After a storm felled the trees on one block, that pavement ran hotter the next July than it had the year before.
- C) Raman reports that it was not the case that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks.
- D) Raman reports that pavement on the tree-lined blocks was cooler at 3 p.m. than pavement on the bare blocks, which removes any need for caution about the finding.

885. Hard

While researching a paper, a student took the following notes:

- Subject studied: bus trips on Center Avenue.
- Researcher: Dr. Luis Ortega.
- Result reported: afternoon bus trips were shorter after the lane opened than before it.
- Caution the researcher notes: the study did not survey riders' satisfaction.
- A later observation: The same buses were no faster at dawn, when the avenue was already empty.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ortega reports that afternoon bus trips were shorter after the lane opened than before it, but cautions that the study did not survey riders' satisfaction.
- B) The same buses were no faster at dawn, when the avenue was already empty.
- C) Ortega reports that afternoon bus trips were shorter after the lane opened than before it, which removes any need for caution about the finding.
- D) Ortega reports that it was not the case that afternoon bus trips were shorter after the lane opened than before it.

886. Hard

While researching a paper, a student took the following notes:

- Subject studied: turnout in a local election.
- Researcher: Dr. Nina Patel.
- Result reported: turnout was higher in the precincts that received the postcard.
- Caution the researcher notes: the study cannot show that every recipient read the card.
- A later observation: The gap was larger in precincts that had low turnout the year before.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Patel reports that it was not the case that turnout was higher in the precincts that received the postcard.
- B) Patel reports that turnout was higher in the precincts that received the postcard, which removes any need for caution about the finding.
- C) Patel reports that turnout was higher in the precincts that received the postcard, but cautions that the study cannot show that every recipient read the card.
- D) The gap was larger in precincts that had low turnout the year before.

887. Hard

While researching a paper, a student took the following notes:

- Subject studied: students who switch languages during class discussion.
- Researcher: Dr. Grace Adeyemi.
- Result reported: summaries from students who had switched languages scored as high as summaries from students who had not.
- Caution the researcher notes: the study did not score spoken answers on the exam.
- A later observation: Teachers who had expected confusion found the written work orderly.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Adeyemi reports that it was not the case that summaries from students who had switched languages scored as high as summaries from students who had not.
- B) Adeyemi reports that summaries from students who had switched languages scored as high as summaries from students who had not, but cautions that the study did not score spoken answers on the exam.
- C) Adeyemi reports that summaries from students who had switched languages scored as high as summaries from students who had not, which removes any need for caution about the finding.
- D) Teachers who had expected confusion found the written work orderly.

888. Hard

While researching a paper, a student took the following notes:

- Subject studied: a high school that moved its start time later.
- Researcher: Dr. Joan Ekstrom.
- Result reported: first-period absences fell in the semester after the change.
- Caution the researcher notes: she did not measure how long students actually slept.
- A later observation: Absences in the last period of the day did not fall.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ekstrom reports that it was not the case that first-period absences fell in the semester after the change.
- B) Absences in the last period of the day did not fall.
- C) Ekstrom reports that first-period absences fell in the semester after the change, but cautions that she did not measure how long students actually slept.
- D) Ekstrom reports that first-period absences fell in the semester after the change, which removes any need for caution about the finding.

889. Hard

While researching a paper, a student took the following notes:

- Subject studied: wax-cylinder recordings from the 1890s.
- Researcher: Dr. Ruth Adelman.
- Result reported: more words were intelligible on the cool-room cylinders than on the attic cylinders.
- Caution the researcher notes: she did not compare cylinders of music with cylinders of speech.
- A later observation: A cylinder moved from an attic to a cool room did not regain the words already lost.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Adelman reports that more words were intelligible on the cool-room cylinders than on the attic cylinders, which removes any need for caution about the finding.
- B) Adelman reports that it was not the case that more words were intelligible on the cool-room cylinders than on the attic cylinders.
- C) A cylinder moved from an attic to a cool room did not regain the words already lost.
- D) Adelman reports that more words were intelligible on the cool-room cylinders than on the attic cylinders, but cautions that she did not compare cylinders of music with cylinders of speech.

890. Hard

While researching a paper, a student took the following notes:

- Subject studied: summer surface temperatures under city trees.
- Researcher: Dr. Camille Duval.
- Result reported: blocks with more canopy had cooler midday surfaces.
- Caution the researcher notes: the team did not measure winter temperatures.
- A later observation: A block that lost canopy to pruning warmed the next summer.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) A block that lost canopy to pruning warmed the next summer.
- B) Duval reports that blocks with more canopy had cooler midday surfaces, which removes any need for caution about the finding.
- C) Duval reports that blocks with more canopy had cooler midday surfaces, but cautions that the team did not measure winter temperatures.
- D) Duval reports that it was not the case that blocks with more canopy had cooler midday surfaces.

891. Hard

While researching a paper, a student took the following notes:

- Subject studied: county health reports from 1957.
- Researcher: Dr. Edith Lang.
- Result reported: the count of new cases was lower in the summer after the clinics.
- Caution the researcher notes: a drop in one county's report does not by itself prove the clinics caused it.
- A later observation: A neighboring county that held no clinics did not show a similar drop.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Lang reports that the count of new cases was lower in the summer after the clinics, but cautions that a drop in one county's report does not by itself prove the clinics caused it.
- B) Lang reports that it was not the case that the count of new cases was lower in the summer after the clinics.
- C) Lang reports that the count of new cases was lower in the summer after the clinics, which removes any need for caution about the finding.
- D) A neighboring county that held no clinics did not show a similar drop.

892. Hard

While researching a paper, a student took the following notes:

- Subject studied: homework hours and quiz scores in one course.
- Researcher: Dr. Hannah Weiss.
- Result reported: students with more reported hours had higher scores on average.
- Caution the researcher notes: the study did not observe whether the reported hours were accurate.
- A later observation: The top scores also belonged to students who had scored high before the homework was assigned.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Weiss reports that students with more reported hours had higher scores on average, which removes any need for caution about the finding.
- B) Weiss reports that students with more reported hours had higher scores on average, but cautions that the study did not observe whether the reported hours were accurate.
- C) The top scores also belonged to students who had scored high before the homework was assigned.
- D) Weiss reports that it was not the case that students with more reported hours had higher scores on average.

893. Hard

While researching a paper, a student took the following notes:

- Subject studied: a mill town in the 1840s.
- Researcher: Dr. Patrick Doyle.
- Result reported: the letters name start and end times that add up to more hours than the notice lists.
- Caution the researcher notes: he found no letters from the mill owner about the schedule.
- A later observation: A company ledger of wages for piecework does not list hours at all.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Doyle reports that it was not the case that the letters name start and end times that add up to more hours than the notice lists.
- B) Doyle reports that the letters name start and end times that add up to more hours than the notice lists, which removes any need for caution about the finding.
- C) Doyle reports that the letters name start and end times that add up to more hours than the notice lists, but cautions that he found no letters from the mill owner about the schedule.
- D) A company ledger of wages for piecework does not list hours at all.

894. Hard

While researching a paper, a student took the following notes:

- Subject studied: steel bridges in hot weather.
- Researcher: Dr. Miguel Santos.
- Result reported: the gaps at the joints were narrower in the afternoon than at dawn.
- Caution the researcher notes: the crews did not measure traffic weight.
- A later observation: On a cool cloudy day the afternoon gaps barely changed.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn, but cautions that the crews did not measure traffic weight.
- B) On a cool cloudy day the afternoon gaps barely changed.
- C) Santos reports that the gaps at the joints were narrower in the afternoon than at dawn, which removes any need for caution about the finding.
- D) Santos reports that it was not the case that the gaps at the joints were narrower in the afternoon than at dawn.

895. Hard

While researching a paper, a student took the following notes:

- Subject studied: fields farmed without plowing.
- Researcher: Dr. Tanya Brooks.
- Result reported: less soil was caught below the no-till fields.
- Caution the researcher notes: she did not measure the crop yield.
- A later observation: After the no-till fields were plowed for a new crop, the next storm carried more soil.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) After the no-till fields were plowed for a new crop, the next storm carried more soil.
- B) Brooks reports that it was not the case that less soil was caught below the no-till fields.
- C) Brooks reports that less soil was caught below the no-till fields, but cautions that she did not measure the crop yield.
- D) Brooks reports that less soil was caught below the no-till fields, which removes any need for caution about the finding.

896. Hard

While researching a paper, a student took the following notes:

- Subject studied: range of electric delivery vans in cold weather.
- Researcher: Dr. Omar Farid.
- Result reported: miles per charge were lower when the morning temperature was lower.
- Caution the researcher notes: the logs do not separate highway miles from city miles.
- A later observation: Using a garage that kept the vans warm overnight reduced the loss.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Farid reports that miles per charge were lower when the morning temperature was lower, which removes any need for caution about the finding.
- B) Farid reports that it was not the case that miles per charge were lower when the morning temperature was lower.
- C) Farid reports that miles per charge were lower when the morning temperature was lower, but cautions that the logs do not separate highway miles from city miles.
- D) Using a garage that kept the vans warm overnight reduced the loss.

897. Hard

While researching a paper, a student took the following notes:

- Subject studied: two oral versions of a star story.
- Researcher: Dr. Naomi Feldman.
- Result reported: the named stars match, and the plots of the stories do not.
- Caution the researcher notes: she did not claim that one story is older than the other.
- A later observation: A third community farther inland does not tell a story about that group at all.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Feldman reports that the named stars match, and the plots of the stories do not, but cautions that she did not claim that one story is older than the other.
- B) Feldman reports that it was not the case that the named stars match, and the plots of the stories do not.
- C) Feldman reports that the named stars match, and the plots of the stories do not, which removes any need for caution about the finding.
- D) A third community farther inland does not tell a story about that group at all.

898. Hard

While researching a paper, a student took the following notes:

- Subject studied: attendance on days when a school garden was used.
- Researcher: Dr. Emily Cho.
- Result reported: fewer students were absent on garden days.
- Caution the researcher notes: the rolls do not say whether the garden caused the attendance.
- A later observation: The garden days were also days when a popular teacher was present.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Cho reports that fewer students were absent on garden days, but cautions that the rolls do not say whether the garden caused the attendance.
- B) The garden days were also days when a popular teacher was present.
- C) Cho reports that it was not the case that fewer students were absent on garden days.
- D) Cho reports that fewer students were absent on garden days, which removes any need for caution about the finding.

899. Hard

While researching a paper, a student took the following notes:

- Subject studied: a newspaper and a diary from the week of a town fire.
- Researcher: Dr. Lydia Grant.
- Result reported: the diary's Tuesday entry describes the fire, and the headline says Thursday.
- Caution the researcher notes: she does not know which document was written first on the day itself.
- A later observation: A later correction in the newspaper moves the date to Tuesday.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Grant reports that it was not the case that the diary's Tuesday entry describes the fire, and the headline says Thursday.
- B) Grant reports that the diary's Tuesday entry describes the fire, and the headline says Thursday, but cautions that she does not know which document was written first on the day itself.
- C) Grant reports that the diary's Tuesday entry describes the fire, and the headline says Thursday, which removes any need for caution about the finding.
- D) A later correction in the newspaper moves the date to Tuesday.

900. Hard

While researching a paper, a student took the following notes:

- Subject studied: pigment on an outdoor fresco.
- Researcher: Dr. Irene Solano.
- Result reported: the sunny red sections had lightened more than the sunny earth-colored sections.
- Caution the researcher notes: she did not remove any pigment for a laboratory test.
- A later observation: A shaded red section had barely lightened.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Solano reports that it was not the case that the sunny red sections had lightened more than the sunny earth-colored sections.
- B) Solano reports that the sunny red sections had lightened more than the sunny earth-colored sections, but cautions that she did not remove any pigment for a laboratory test.
- C) A shaded red section had barely lightened.
- D) Solano reports that the sunny red sections had lightened more than the sunny earth-colored sections, which removes any need for caution about the finding.

901. Hard

While researching a paper, a student took the following notes:

- Subject studied: salt and dried food in a ship's log.
- Researcher: Dr. Margaret Poe.
- Result reported: the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.
- Caution the researcher notes: the log is not a controlled experiment.
- A later observation: A barrel that got wet was called spoiled even though it had been heavily salted.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) A barrel that got wet was called spoiled even though it had been heavily salted.
- B) Poe reports that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled, which removes any need for caution about the finding.
- C) Poe reports that it was not the case that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled.
- D) Poe reports that the heavily salted barrels were called sound on later dates when the lightly salted ones were called spoiled, but cautions that the log is not a controlled experiment.

902. Hard

While researching a paper, a student took the following notes:

- Subject studied: a nineteenth-century school that restricted sign language.
- Researcher: Dr. Charles Ito.
- Result reported: the marks in those subjects were lower in the restriction years.
- Caution the researcher notes: the reports do not record what families thought of the rule.
- A later observation: Marks in drawing, which had not been taught in sign, stayed about the same.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Ito reports that the marks in those subjects were lower in the restriction years, but cautions that the reports do not record what families thought of the rule.
- B) Ito reports that it was not the case that the marks in those subjects were lower in the restriction years.
- C) Ito reports that the marks in those subjects were lower in the restriction years, which removes any need for caution about the finding.
- D) Marks in drawing, which had not been taught in sign, stayed about the same.

903. Hard

While researching a paper, a student took the following notes:

- Subject studied: a reminder text and missed clinic appointments.
- Researcher: Dr. Rachel Stein.
- Result reported: the texting clinics had a lower miss rate.
- Caution the researcher notes: the comparison does not isolate the text from the new evening hour.
- A later observation: The texting clinics also added an evening hour in the same month.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) The texting clinics also added an evening hour in the same month.
- B) Stein reports that it was not the case that the texting clinics had a lower miss rate.
- C) Stein reports that the texting clinics had a lower miss rate, which removes any need for caution about the finding.
- D) Stein reports that the texting clinics had a lower miss rate, but cautions that the comparison does not isolate the text from the new evening hour.

904. Hard

While researching a paper, a student took the following notes:

- Subject studied: nesting success of a shorebird.
- Researcher: Dr. Thomas Berger.
- Result reported: a larger share of the distant nests hatched.
- Caution the researcher notes: the volunteers did not band the adult birds.
- A later observation: When the path was closed for a month, nests beside it hatched as often as distant nests.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Berger reports that a larger share of the distant nests hatched, which removes any need for caution about the finding.
- B) Berger reports that a larger share of the distant nests hatched, but cautions that the volunteers did not band the adult birds.
- C) Berger reports that it was not the case that a larger share of the distant nests hatched.
- D) When the path was closed for a month, nests beside it hatched as often as distant nests.

905. Hard

While researching a paper, a student took the following notes:

- Subject studied: batteries stored at different states of charge.
- Researcher: Dr. Ingrid Solberg.
- Result reported: the half-charged batteries lost less capacity.
- Caution the researcher notes: she did not test batteries made by another manufacturer.
- A later observation: Batteries stored in a hot shed lost capacity regardless of the charge level.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Solberg reports that it was not the case that the half-charged batteries lost less capacity.
- B) Solberg reports that the half-charged batteries lost less capacity, but cautions that she did not test batteries made by another manufacturer.
- C) Batteries stored in a hot shed lost capacity regardless of the charge level.
- D) Solberg reports that the half-charged batteries lost less capacity, which removes any need for caution about the finding.

906. Hard

While researching a paper, a student took the following notes:

- Subject studied: tutoring hours and a skills quiz.
- Researcher: Dr. Olivia Grant.
- Result reported: higher hours lined up with higher scores.
- Caution the researcher notes: the log does not show that the tutoring produced the scores.
- A later observation: Students with high scores the week before also tended to attend more hours.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Students with high scores the week before also tended to attend more hours.
- B) Grant reports that it was not the case that higher hours lined up with higher scores.
- C) Grant reports that higher hours lined up with higher scores, which removes any need for caution about the finding.
- D) Grant reports that higher hours lined up with higher scores, but cautions that the log does not show that the tutoring produced the scores.

907. Hard

While researching a paper, a student took the following notes:

- Subject studied: captions in a museum exhibit.
- Researcher: Dr. Judith Hale.
- Result reported: a larger share of the long-caption group stated the claim accurately.
- Caution the researcher notes: she did not test whether visitors remembered the claim a week later.
- A later observation: When both captions stated the claim in the first sentence, the gap narrowed.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Hale reports that it was not the case that a larger share of the long-caption group stated the claim accurately.
- B) When both captions stated the claim in the first sentence, the gap narrowed.
- C) Hale reports that a larger share of the long-caption group stated the claim accurately, which removes any need for caution about the finding.
- D) Hale reports that a larger share of the long-caption group stated the claim accurately, but cautions that she did not test whether visitors remembered the claim a week later.

908. Hard

While researching a paper, a student took the following notes:

- Subject studied: two editions of a political pamphlet from 1792.
- Researcher: Dr. Eleanor Voss.
- Result reported: the first edition names a person as responsible, and the second edition says only that mistakes were made.
- Caution the researcher notes: she does not know how many readers saw each edition.
- A later observation: A handwritten note in one copy of the second edition says 'safer'.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Voss reports that the first edition names a person as responsible, and the second edition says only that mistakes were made, but cautions that she does not know how many readers saw each edition.
- B) Voss reports that the first edition names a person as responsible, and the second edition says only that mistakes were made, which removes any need for caution about the finding.
- C) Voss reports that it was not the case that the first edition names a person as responsible, and the second edition says only that mistakes were made.
- D) A handwritten note in one copy of the second edition says 'safer'.

909. Hard

While researching a paper, a student took the following notes:

- Subject studied: a cap on class size in an after-school program.
- Researcher: Dr. Christine Dahl.
- Result reported: the smaller sections finished a larger share of students.
- Caution the researcher notes: the comparison does not separate class size from the instructor.
- A later observation: The smaller sections were also taught by the most experienced instructors.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Dahl reports that it was not the case that the smaller sections finished a larger share of students.
- B) Dahl reports that the smaller sections finished a larger share of students, which removes any need for caution about the finding.
- C) The smaller sections were also taught by the most experienced instructors.
- D) Dahl reports that the smaller sections finished a larger share of students, but cautions that the comparison does not separate class size from the instructor.

910. Hard

While researching a paper, a student took the following notes:

- Subject studied: salt marsh grass and flood height.
- Researcher: Dr. Laura Kim.
- Result reported: the denser stretches had lower landward peaks.
- Caution the researcher notes: she did not measure the grass in winter.
- A later observation: Where the grass had been cut, the landward peak rose to match the open stretches.

The student wants to mention the result and acknowledge a limit of the finding.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A) Kim reports that the denser stretches had lower landward peaks, but cautions that she did not measure the grass in winter.
- B) Kim reports that the denser stretches had lower landward peaks, which removes any need for caution about the finding.
- C) Kim reports that it was not the case that the denser stretches had lower landward peaks.
- D) Where the grass had been cut, the landward peak rose to match the open stretches.

Expression of Ideas: Transitions

911. *Easy*

The kiln was heated too quickly. _____, the glaze blistered and pulled away from the clay.

Which choice completes the text with the most logical transition?

- A) For instance
- B) However
- C) As a result
- D) Moreover

912. *Easy*

The soil was sandy and drained within minutes. _____, the tomato plants wilted the day after each watering.

Which choice completes the text with the most logical transition?

- A) In addition
- B) For example
- C) Therefore
- D) Nevertheless

913. *Easy*

The invitation was sent to an old address. _____, several guests never received it.

Which choice completes the text with the most logical transition?

- A) By contrast
- B) Furthermore
- C) Consequently
- D) For instance

914. *Easy*

Ice covered the front step. _____, the building manager closed the entrance.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) Even so
- C) For this reason
- D) For example

915. Easy

The musician skipped two weeks of practice. _____, the difficult passage fell apart at the recital.

Which choice completes the text with the most logical transition?

- A) As a result
- B) However
- C) For instance
- D) In addition

916. Easy

A page was missing from the score. _____, the quartet stopped in the third movement.

Which choice completes the text with the most logical transition?

- A) Nevertheless
- B) Furthermore
- C) Therefore
- D) For example

917. Easy

The filter had not been changed. _____, the pump overheated before noon.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) Moreover
- C) By contrast
- D) For instance

918. Easy

The seedlings were left in full sun. _____, their leaves scorched by midafternoon.

Which choice completes the text with the most logical transition?

- A) In addition
- B) Even so
- C) For example
- D) For this reason

919. Easy

The alarm clock failed. _____, Nora missed the first train.

Which choice completes the text with the most logical transition?

- A) Furthermore
- B) However
- C) As a result
- D) For instance

920. Easy

Salt was left on the steel tools. _____, they rusted over the weekend.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) Nevertheless
- C) For example
- D) Therefore

921. Easy

The trail markers had been taken down. _____, the afternoon group lost the route.

Which choice completes the text with the most logical transition?

- A) In addition
- B) For instance
- C) Consequently
- D) By contrast

922. Easy

The room had no working fan. _____, the paint fumes lingered for hours.

Which choice completes the text with the most logical transition?

- A) For example
- B) For this reason
- C) Furthermore
- D) Even so

923. Easy

The lens was smudged. _____, every photograph from that roll looked hazy.

Which choice completes the text with the most logical transition?

- A) As a result
- B) For instance
- C) However
- D) Moreover

924. Easy

The deadline was never announced. _____, half the class missed it.

Which choice completes the text with the most logical transition?

- A) Nevertheless
- B) In addition
- C) For example
- D) Therefore

925. Easy

The gate latch was broken. _____, the sheep wandered into the lane.

Which choice completes the text with the most logical transition?

- A) By contrast
- B) Furthermore
- C) For instance
- D) Consequently

926. Easy

The backup file was never saved. _____, the deleted paragraph could not be recovered.

Which choice completes the text with the most logical transition?

- A) Even so
- B) Moreover
- C) For example
- D) For this reason

927. Easy

The oven ran hot. _____, the loaves darkened before the centers were done.

Which choice completes the text with the most logical transition?

- A) In addition
- B) For instance
- C) However
- D) As a result

928. Easy

The map omitted the new exit. _____, drivers continued to the next town.

Which choice completes the text with the most logical transition?

- A) For example
- B) Therefore
- C) Furthermore
- D) Nevertheless

929. Easy

The citation was incomplete. _____, the editor could not locate the source.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) By contrast
- C) Moreover
- D) For instance

930. Easy

The plastic cover trapped moisture. _____, mold appeared on the sketches.

Which choice completes the text with the most logical transition?

- A) Even so
- B) For this reason
- C) For example
- D) In addition

931. Easy

No one refilled the lamp. _____, the workshop went dark at dusk.

Which choice completes the text with the most logical transition?

- A) As a result
- B) However
- C) Furthermore
- D) For instance

932. Easy

The adhesive was applied too thinly. _____, the label peeled off in a day.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) For example
- C) Therefore
- D) Nevertheless

933. Easy

The speech ran long. _____, the next speaker lost ten minutes.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) By contrast
- C) For instance
- D) In addition

934. Easy

The sample was left uncapped. _____, the solvent evaporated overnight.

Which choice completes the text with the most logical transition?

- A) Furthermore
- B) Even so
- C) For example
- D) For this reason

935. Easy

The bus left eight minutes early. _____, three commuters missed it.

Which choice completes the text with the most logical transition?

- A) For instance
- B) As a result
- C) However
- D) Moreover

936. Easy

The stitches were uneven. _____, the seam opened after one wash.

Which choice completes the text with the most logical transition?

- A) In addition
- B) For example
- C) Nevertheless
- D) Therefore

937. Easy

The password was changed without notice. _____, the night clerk could not log in.

Which choice completes the text with the most logical transition?

- A) Furthermore
- B) For instance
- C) Consequently
- D) By contrast

938. Easy

Heavy rain fell on the fresh plaster. _____, the wall streaked before it cured.

Which choice completes the text with the most logical transition?

- A) For this reason
- B) Moreover
- C) For example
- D) Even so

939. Easy

The translator skipped the footnote. _____, a key date disappeared from the English text.

Which choice completes the text with the most logical transition?

- A) However
- B) For instance
- C) In addition
- D) As a result

940. Easy

The battery was already weak. _____, the recorder stopped during the interview.

Which choice completes the text with the most logical transition?

- A) Furthermore
- B) Nevertheless
- C) Therefore
- D) For example

941. Easy

The trail is steep. _____, the last mile is unmarked.

Which choice completes the text with the most logical transition?

- A) Nevertheless
- B) As a result
- C) In addition
- D) For example

942. Easy

The novel quotes two diaries. _____, it includes a map of the 1850 route.

Which choice completes the text with the most logical transition?

- A) Furthermore
- B) By contrast
- C) Therefore
- D) For instance

943. Easy

The lab replaced the cracked beakers. _____, it ordered a backup thermometer.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) For example
- C) Even so
- D) Moreover

944. Easy

The city planted oaks along the avenue. _____, it widened the sidewalks.

Which choice completes the text with the most logical transition?

- A) For this reason
- B) However
- C) For instance
- D) In addition

945. Easy

The essay cites the 1910 speech. _____, it quotes a letter written the same week.

Which choice completes the text with the most logical transition?

- A) Nevertheless
- B) Furthermore
- C) For example
- D) As a result

946. Easy

The bakery stopped using the old oven. _____, it hired a second baker for the morning shift.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) For instance
- C) Therefore
- D) By contrast

947. Easy

The museum repaired the torn canvas. _____, it improved the lighting in that gallery.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) For example
- C) Even so
- D) In addition

948. Easy

The class read the poem aloud. _____, the students annotated the final couplet.

Which choice completes the text with the most logical transition?

- A) However
- B) For instance
- C) For this reason
- D) Furthermore

949. Easy

The engineer shortened the bolt. _____, she added a lock washer.

Which choice completes the text with the most logical transition?

- A) For example
- B) As a result
- C) Nevertheless
- D) Moreover

950. Easy

The report describes the survey method. _____, it prints the questionnaire in an appendix.

Which choice completes the text with the most logical transition?

- A) Therefore
- B) For instance
- C) By contrast
- D) In addition

951. Easy

The garden lost its tomatoes to frost. _____, the basil turned black.

Which choice completes the text with the most logical transition?

- A) For example
- B) Consequently
- C) Furthermore
- D) Even so

952. Easy

The archive digitized the letters. _____, it transcribed the ones written in faded ink.

Which choice completes the text with the most logical transition?

- A) However
- B) For this reason
- C) Moreover
- D) For instance

953. Easy

The team measured the bridge at dawn. _____, they measured it again at midafternoon.

Which choice completes the text with the most logical transition?

- A) In addition
- B) For example
- C) Nevertheless
- D) As a result

954. Easy

The cookbook explains the dough. _____, it shows a photograph of the finished loaf.

Which choice completes the text with the most logical transition?

- A) For instance
- B) Therefore
- C) Furthermore
- D) By contrast

955. Easy

The policy caps class size. _____, it adds a study hour after school.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) For example
- C) Moreover
- D) Even so

956. Easy

The film restores the missing scene. _____, it corrects the color of the night shots.

Which choice completes the text with the most logical transition?

- A) In addition
- B) However
- C) For instance
- D) For this reason

957. Easy

The biologist tagged twenty turtles. _____, she recorded the temperature of each nest.

Which choice completes the text with the most logical transition?

- A) For example
- B) Furthermore
- C) Nevertheless
- D) As a result

958. Easy

The library extended its hours. _____, it started a weekend homework desk.

Which choice completes the text with the most logical transition?

- A) By contrast
- B) For instance
- C) Moreover
- D) Therefore

959. Easy

The composer cut eight measures. _____, she changed the key of the chorus.

Which choice completes the text with the most logical transition?

- A) In addition
- B) For example
- C) Even so
- D) Consequently

960. Easy

The farmer rotated the crops. _____, he planted a strip of native grass along the ditch.

Which choice completes the text with the most logical transition?

- A) However
- B) Furthermore
- C) For instance
- D) For this reason

961. Medium

The trail is steep for the first hour. _____, the last mile is nearly flat.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) However
- C) For instance
- D) As a result

962. Medium

The first draft was disorganized. _____, the revision was tight and clear.

Which choice completes the text with the most logical transition?

- A) For example
- B) In addition
- C) Therefore
- D) Nevertheless

963. Medium

The sky was clear at dawn. _____, rain began before noon.

Which choice completes the text with the most logical transition?

- A) For instance
- B) Furthermore
- C) By contrast
- D) Consequently

964. Medium

The device fits in a coat pocket. _____, it stores several thousand photographs.

Which choice completes the text with the most logical transition?

- A) Even so
- B) Moreover
- C) For this reason
- D) For example

965. Medium

The recipe looks elaborate. _____, it uses only four ingredients.

Which choice completes the text with the most logical transition?

- A) For instance
- B) As a result
- C) However
- D) In addition

966. Medium

Attendance at the lectures fell in March. _____, it rose steadily in April.

Which choice completes the text with the most logical transition?

- A) For example
- B) Nevertheless
- C) Furthermore
- D) Therefore

967. Medium

The outer wall of the chapel is plain brick. _____, the interior is covered with painted figures.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) For instance
- C) By contrast
- D) Consequently

968. Medium

The sample contained only twelve households. _____, the same pattern appeared in every one of them.

Which choice completes the text with the most logical transition?

- A) Even so
- B) In addition
- C) For example
- D) For this reason

969. Medium

The novel opens in a quiet kitchen. _____, its last chapter is loud and abrupt.

Which choice completes the text with the most logical transition?

- A) For instance
- B) Furthermore
- C) As a result
- D) However

970. Medium

The footbridge looks delicate. _____, it carries buses as well as pedestrians.

Which choice completes the text with the most logical transition?

- A) Nevertheless
- B) Therefore
- C) For example
- D) Moreover

971. Medium

The instructions filled less than a page. _____, assembling the frame still took an hour.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) For instance
- C) In addition
- D) By contrast

972. Medium

The singer was unknown in January. _____, by June the hall was sold out.

Which choice completes the text with the most logical transition?

- A) Even so
- B) Furthermore
- C) For this reason
- D) For example

973. Medium

The chemical is harmless in dry form. _____, it irritates skin when mixed with water.

Which choice completes the text with the most logical transition?

- A) For instance
- B) Moreover
- C) As a result
- D) However

974. Medium

The town's population is small. _____, its archive holds records going back to 1710.

Which choice completes the text with the most logical transition?

- A) Nevertheless
- B) In addition
- C) For example
- D) Therefore

975. Medium

The experiment failed on the first attempt. _____, the second attempt produced a clear result.

Which choice completes the text with the most logical transition?

- A) For instance
- B) Consequently
- C) By contrast
- D) Furthermore

976. Medium

The poem is only fourteen lines. _____, students needed a full period to explain the closing image.

Which choice completes the text with the most logical transition?

- A) For this reason
- B) For example
- C) Even so
- D) Moreover

977. Medium

The apartment is far from the campus. _____, the commute takes less than fifteen minutes by train.

Which choice completes the text with the most logical transition?

- A) For instance
- B) As a result
- C) In addition
- D) However

978. Medium

The paint looked dull in the can. _____, it dried to a bright finish.

Which choice completes the text with the most logical transition?

- A) Therefore
- B) Furthermore
- C) Nevertheless
- D) For example

979. Medium

The witness spoke softly. _____, every word was distinct in the recording.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) Moreover
- C) For instance
- D) By contrast

980. Medium

The early reviews were harsh. _____, later critics treated the film as a major work.

Which choice completes the text with the most logical transition?

- A) For this reason
- B) In addition
- C) Even so
- D) For example

981. Medium

The path is poorly marked. _____, local hikers can follow it without a map.

Which choice completes the text with the most logical transition?

- A) For instance
- B) However
- C) Furthermore
- D) As a result

982. Medium

The machine is thirty years old. _____, it still meets the modern safety test.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) For example
- C) Nevertheless
- D) Therefore

983. Medium

The soup tasted bland at first. _____, the final spoonful was heavily salted.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) In addition
- C) For instance
- D) By contrast

984. Medium

The author avoids direct political statements. _____, the plot keeps returning to a contested election.

Which choice completes the text with the most logical transition?

- A) Furthermore
- B) For this reason
- C) For example
- D) Even so

985. Medium

The battery is advertised as long-lasting. _____, in cold weather it drains before noon.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) As a result
- C) However
- D) For instance

986. Hard

Several desert plants store water in their tissues. _____, the saguaro holds water in its pleated stem and swells after rain.

Which choice completes the text with the most logical transition?

- A) Nevertheless
- B) For example
- C) As a result
- D) Moreover

987. Hard

Some migratory birds travel thousands of miles without a long stop. _____, the bar-tailed godwit can fly from Alaska to New Zealand in a single journey.

Which choice completes the text with the most logical transition?

- A) For instance
- B) Therefore
- C) By contrast
- D) In addition

988. Hard

A few city programs measure success by returns, not by fines. _____, after Reed dropped overdue fees, more books came back within a month.

Which choice completes the text with the most logical transition?

- A) Consequently
- B) For example
- C) Furthermore
- D) Even so

989. Hard

Certain alloys expand very little when heated. _____, Invar, a nickel-iron alloy, is used where a change in length would ruin a measurement.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) For this reason
- C) For instance
- D) However

990. Hard

Some archives preserve sound as well as paper. _____, the library holds wax cylinders of speeches recorded in the 1890s.

Which choice completes the text with the most logical transition?

- A) In addition
- B) Nevertheless
- C) As a result
- D) For example

991. Hard

A number of coastal towns have moved houses away from eroding bluffs. _____, in 2018 North Haven relocated six cottages farther inland.

Which choice completes the text with the most logical transition?

- A) For instance
- B) Therefore
- C) Furthermore
- D) By contrast

992. Hard

Several painters ground their own pigments. _____, Joan Mitchell's studio notes list the stones she crushed for a blue.

Which choice completes the text with the most logical transition?

- A) Even so
- B) Moreover
- C) For example
- D) Consequently

993. Hard

Some bridges are designed to flex in high wind. _____, the deck of the river bridge can sway slightly without cracking.

Which choice completes the text with the most logical transition?

- A) For this reason
- B) However
- C) For instance
- D) In addition

994. Hard

A few mathematical proofs are short enough to fit in a margin. _____, the modern proof that there are infinitely many primes takes only a few lines.

Which choice completes the text with the most logical transition?

- A) Furthermore
- B) For example
- C) Nevertheless
- D) As a result

995. Hard

Some foods were dried to last through winter. _____, apple rings hung in the farmhouse attic until spring.

Which choice completes the text with the most logical transition?

- A) Therefore
- B) By contrast
- C) Moreover
- D) For instance

996. Hard

Certain plays depend on a single stage object. _____, in this production a wooden chair is the only furniture.

Which choice completes the text with the most logical transition?

- A) In addition
- B) Even so
- C) For example
- D) Consequently

997. Hard

Some letters reveal more in a postscript than in the body. _____, a note added at the bottom of the 1864 letter names the person the writer would not mention above.

Which choice completes the text with the most logical transition?

- A) For instance
- B) However
- C) For this reason
- D) Furthermore

998. Hard

A few laboratories keep null results on file. _____, the lab's 2016 folder records a reading-speed study that found no difference between two typefaces.

Which choice completes the text with the most logical transition?

- A) Moreover
- B) Nevertheless
- C) As a result
- D) For example

999. Hard

Some trails are rebuilt with water bars to slow runoff. _____, the switchbacks above Mill Creek now include a low log at every turn.

Which choice completes the text with the most logical transition?

- A) By contrast
- B) Therefore
- C) In addition
- D) For instance

1000. *Hard*

Certain oral histories correct a date printed in the newspaper. _____, Mrs. Adelman's interview places the fire on a Tuesday, not on the Thursday the headline claimed.

Which choice completes the text with the most logical transition?

- A) Even so
- B) Consequently
- C) Furthermore
- D) For example
